Delinquency Assumes Proportions

Property taxes outstanding, carried on the books and delinquent, at the end of 1933, will be approximately \$45,000,000 or a sum equal to 108 per cent of the full year 1933 tax levy of \$41,000,000. This probable delinquency is forecast from trends now in evidence, and assumes payment of \$3,000,000 on back taxes and of a higher proportion of 1933 taxes than was in evidence at the time the first half of 1933 taxes were paid.

For counties outside of Multnomah county, the delinquency is forecast as \$34,000,000, a sum equal to 133 per cent of the entire 1933 tax levied on property in those counties.

In Wallowa county, the accumulated delinquency will equal about 280 per cent of this year's tax levy. In Clatsop county it will equal 230 per cent. In round numbers, in Clatsop county, the accumulated delinquency will amount to about \$3,950,000 at the end of 1933, a sum more than double the annual tax levy.

In Grant, Crook and Jefferson counties, in Central Oregon, the delinquency at the end of 1933 will be more than twice the size of the 1933 levy; in Coos and Curry counties in Southwestern Oregon the accumulated delinquency will be just about twice the amount of this year's levy.

Multnomah county is the brightest spot on the tax delinquency map of Oregon, but in that great county there is likely to be \$11,000,000 of accumulated delinquency by the end of 1933, a sum equal to two-thirds of the 1933 tax levy. The cash position of tax-levying bodies in Multnomah county will begin to be somewhat precarious by that time. The big county will begin to feel some of the tax troubles that have been in evidence in smaller counties for some time.

All of the delinquency figures above are in spite of the fact that the railroads, the public utilities and the oil companies have paid their taxes. The projection assumes that these big corporations will pay their second half taxes in 1933. If they fail on their second half taxes, the delinquency estimates will have to be increased by several million dollars. Considering that these large interests have paid their taxes, the fact brings out in acute relief the delinquency of taxes on farms, homes, timber lands and other classes of property which cannot pay.

There probably will be 1,000 school districts in Oregon whose district taxes in 1933 as collected will not equal one-sixth of their levies. They are the school districts which are dependent on farmer taxpayers, and in which the railroads, the public utilities and the oil companies have little or no property. If the sales tax should be voted by the people and sustained by the courts, the operating revenues of these 1,000 districts will be somewhat fortified by cash from that source; if the sales tax fails, it is difficult to foresee how they can operate much longer, as their warrants are practically unmarketable at this time, although some day they will have to be paid 100 cents on the dollar, with interest, if real estate in those districts survives in private ownership.—Oregon Voter.

HAS BIG TASK AHEAD

The new Farm Credit Administration, headed by Henry Morgenthau, Jr., of New York, began its existence as a separate entity on May 27. The credit agencies merged under the new administration include the Federal Farm Loan Banks and the Intermediate Credit Banks, the Crop Production Loan office, the Farmers Seed Loan office, together with the regional Agricultural Credit organizations which were established last year. The new group has a big task on its hands, with tremendous possibilities of service.

Significant Change of Name

When it was first proposed to build a dam across the Colorado river at Boulder Canyon, the project was referred to as Boulder Dam. After the work was authorized by Congress, the then Secretary of Interior, Ray Lyman Wilbur rechristened it as Hoover Dam. With the change of administration, the present Secretary of the Interior, Harold Ickes, has gone back to the original designation and re-named the project Boulder Dam.

Complete coverage of the eastern end of Washington county and the southwestern part of Multnomah county, that is why our want ads pay.

KANSAS SOCIETY TO PICNIC

All present and former residents of Kansas who are now in Washington and Oregon are invited to attend the annual picnic and reunion of 1933 to be held Sunday, July 16, at Jantzen Beach, Portland.

This year's outing, staged by the Kansas Society of Oregon promises to be the biggest ever held. The 1933 Kansas picnic is held on the same day as the Oklahoma and Nebraska State societies of Oregon. Neighbors as states, they will also be neighbors on Sunday, July 16, all three states having their separate state picnics at this time.

Free admission to the park for all Kansans and former Kansans, Oklahomans, and Nebraskans has been provided for. Every person or family is expected to bring his or her own luncheon or dinner.

TO DESIGN PLANES

Young Richard Dupont, twenty-two-year-old heir to the fabulous Dupont fortune, has his own ideas of the career he wishes to follow. Instead of becoming an elite sportsman, learning his father's business, or merely drifting in the best social circles, Richard plans to learn the trade of airplane designing and aeronautical engineering. He started in as "grease monkey" at the Curtiss Wright School of Aeronautical Engineering at the Grand Central airport, Los Angeles, getting in his hours at the controls of student planes.

Bees and Wasps

The poison-glands of bees and wasps are connected with their ovipositors, which are modified into stings. The poison is held in a round or oval reservoir and is forced into an ovipositor through a tube. Some ichneumon flies have ovipositors six times as long as their bodies. Some gall-flies bore several channels in a plant before they lay their eggs. An egg is pushed from the base of the ovipositor to the point, the point is withdrawn and the egg enters a channel and is pushed forward by the ovipositor until it reaches the bottom of the channel.—Montreal Herald.

Scarecrow Contest

The English blackbird is regarded by farmers as a pest and many are the ingenious methods employed to scare him away. At Dunkirk, Kent, a contest was recently held to find the most effective scarecrow. The idea was to counterfeit with old clothes, rags and what not the angriest farmer. The competition was open to boys and girls of the village. A twelve-year-old boy won first prize for a fierce looking, arm-waving contraption. Villagers proclaimed the contest successful, for, said they, not a blackbird showed his face around the fields for weeks afterward.

Serving "Ex Officio"

Ex officio means by virtue or because of an office; officially. A person serving ex officio on a committee is serving there because of his office, and his power is the same as if he were appointed, unless otherwise limited. The President of the United States is ex officio president of the Red Cross—president of the Red Cross by virtue of his being President of the United States.

Find Life Worth Living

The old problem, "Is Life Worth Living?" found an affirmative answer in a study made among a number of average persons in various occupations. Their feelings, recorded throughout each day for a month, showed that 50 per cent of their time was passed pleasantly, 28 per cent of it indifferently and only 22 per cent unpleasantly.—Collier's Magazine.

BERRY CANNING SEASON BRINGS HINTS ON METHODS

Raspberries and logans are the seasonable berries now ready for canning and both lend themselves well to the cold pack method of canning. Those living in or near berry farms have the advantage of being able to can berries within a few hours after picking or at least the same day, thus insuring best color and flavor. Here are some directions for cold-pack berry canning:

Wash the berries lightly, if at all, in a colander. Place hot, sterilized jars in a dish pan of very hot water. Pour a few berries into the jar and shake them down by gently tapping the bottom of the jar against a wooden board. Place the jar in the hot water again, add more berries and shake them down, alternately to insure full jars. Add boiling hot sirup made in the following proportions: For one dozen quart jars of red or black raspberries, bring to a boil seven cups of sugar and 11 cups of hot water. For loganberries use 1 cup of sugar and 10 cups of hot water. Fill the jars with sirup to one-half inch from the top and partially seal. In case of automatic seal type of jar, place lid and clamp on jar. Leave jars in the pan of hot water until all are ready to process.

Have hot water bath boiling. Place jars in boiler on a rack which raises the jars at least one-half inch from the bottom, with water one inch over the top of the jars. Cover the container and bring to the boiling point again as soon as possible to help insure full jars. Boil 20 minutes, counting time from when the water is at a rolling boil. Remove jars immediately, complete the seal and invert to cool, except automatic type of seal.

Oven canning and other methods of food preservation are described in Extension Bulletin 450, "Home Food Preservation," which is available free at the office of the county agent or at the home economic extension office at Corvallis.

Corning Gasoline

Quite a number of agricultural papers published in the corn belt, seem to favor the enactment of some law or the encouragement in some way, the use of agricultural products as motor fuel.

Mixture of 10 per cent alcohol and gasoline, according to tests at the Iowa Agricultural College gives greater efficiency than gasoline alone. It also eliminates carbon knocks.

The advocates of this movement say the plan offers a new market for corn, greater than our annual exports. They say it will raise the price of corn

and hogs and other farm commodities naturally through a new demand from a new market and will bring money back into the country where new wealth is always produced and will start a reversed trend in farm prices which is the logical place to end the depression.

Scare-crows Passing

There was a time when grotesque scare-crows could be seen in almost every field in the country but they seem to be getting scarcer each year. Thus, another great symbol of American life, the scare-crow, which persisted for more than three centuries is vanishing from the agricultural sections of the United States. According to a bulletin of the Boker Chemical Co the scare-crow originated soon after the Pilgrim fathers had cleared bits of the wilderness to raise crops. The scare-crow was distinctly American invention, to ward off the American crow, from the native American Indian corn.

The early settlers of this country led an active and busy existence and were at their wits end in the spring to do the many other chores about the newly planted corn against the ravages of the crows and still find time to find time to guard their precious clearing.

They learned that the American crow is a wise bird and respected the power of shot and gunpowder. The crows found out guns were carried by men, so the scare-crow—a dummy—was set up in the fields to frighten the birds and permit the settler to work elsewhere, leaving the dummy to guard the field.

Perhaps after all the scare-crow is only an expediency and oft times does not scare, especially if the farmer does not carry out the illusion and show up with the gun and pop off a crow or two.

You're missing a most valuable part of this paper each week, if you don't read the classified ads.

OLD DRIVERS LICENSES VOID AFTER SEPTEMBER 1

The realization that all drivers licenses issued before July 1, 1931, will be automatically cancelled by law on September 1st has awakened active interest in many motorists, reports Hal E. Hoss, Secretary of State. The most common question asked at his office is "What must I do to get a new license?"

Anticipating that this information will be more in demand as the expiration date on all old licenses draws near, Mr. Hoss has issued a brief formula for obtaining a new-type license.

First, the applicant must obtain the standard application blank from the Secretary of State or from local examination headquarters, state police, or sheriff's office.

Second, he must fill out the form in full and sign it in the presence of a notary public or other person authorized to administer oaths. All state examiners are notaries public and will perform this service without charge.

Third, the applicant must file the completed form before September 1, either by leaving it with an examiner or by sending it to the Secretary of State at Salem. In either case, a payment of \$1 must accompany the application.

Each of the requirements are provided by law and no license can be issued unless all are complied with, it was stated.

There may not always be any significance in names, but it is nevertheless interesting to note, in this period of supposed depression, that Jolly Street Grange has just been organized at Prosperity, South Carolina.

Arizona has its first Grange unit—a fine start with about fifty charter members.
