OPINION vs AN EXPERIMENT

An 11-man Senate committee begins study this week of one of the administrations noble experiments. The Senators will hear during their study, just what the public thinks of the experiments and from all indications, the public doesn't think much of it.

The experiment in question is the National Labor Relations Act, which for more than three years, has been the monkey wrench in the wheels of industrial peace. It has been condemned by labor, management and the public alike. Its only defender has been the administration and minority group of labor.

What the Senate Committee will have under consideration are several proposals to amend the Act. The proposals have been lying around Congress for many months, but pressure from the Act's defenders have kept the question closed to consideration.

Now it has been brought out into the open by start of public hearings on the amendments by the Senate committee.

Everyone—or almost everyone—hopes the hearing will result in correcting this poorly drafted device of business-labor regulation at this session of Congress.

But whatever hopes may have been raised by start of hearings, they are not helped by the apparent attitude of some Federal officials who still think the Act should be left alone. These officials have expressed this contrary attitude by leaving labor act amendments off the "must" list of legislation for this session.

In the face of almost unanimous labor, management and public demand for correction of the labor law, the blocking of amendments by these Federal officials is tantamount to saying: "the public be damned."

Babson Says---

Continued from Page 1

consumers. If we believe in gradual lowering of world trade barriers within our own borders. Present freight rate differentials amount to a tariff on southern products. The biggest boon to the South now would be the changing of these rates.

King Cotton Dethroned!

The problem which has plagued Dixie for years—dependence on one crop—is on its way to solution. Diversification of industry is speeding up. Low feed costs are stimulating livestock raising and dairy farming. Meanwhile, the chemists are finding industrial uses for new crops such as soy-beans, tung trees, and sweet potatoes and for older crops such as cotton, tobacco and peanuts. Hence while King Cotton is a mighty sick man the southern agricultural outlook is very bright.

Among the South's greatest assets are her water-power resources. The T. V. A. development is a great thing. If it is administered wisely and fairly, the huge power surplus should be completely utilized. Air-conditioning has played a big part in recent southern growth and, stimulated by cheap power, will continue to do so. We hear much about low wages in Dixie. People overlook the fact, however, that living costs in the South are very cheap. A house costing \$3,000 to build in New England can be put up in the South for about \$2,000 and can be heated for about \$50 per year less. Food—particularly farm produce—sells for a song. After lower living costs are considered, southern wages are not too far out of line.

Great Future for Young People

Certainly, if I were a young man I would come down here in the South to "seek my fortune". We need more trained men here. Why stay in New York, Philadelphia, or Boston and starve when you can come down here where you can live comfortably and where you are really needed? Today, for instance, 9 of the 18 states which are rated as excellent business territories on my sales map are in the South! Get in on the ground floor of this southern growth just as your forefathers got in on the ground floor of the industrial growth of the West! Decentralization of industry through the industrial use of farm products is on the way. What better spot in the world for it than here in the "sunny" South!

Now, just a word in closing to my southern neighbors. Ever since I have been visiting your section—18 Winters now—I have been conscious of sectional, racial, and religious prejudices here. Such prejudices are foolish and destructive. They are holding back your development. You in the South have everything—good climate, reasonable labor vast raw materials, and plenty of water-power. Your one drawback is a failure to coop create enthusiastically. I beg of you not to shake your tremendous advantages by outward prejudices!

St. Mary's of the Valley

Students of St. Mary's presented "Dorothy" a comedy drama in three acts, in the Academy auditorium, April 1 at 2 p. m. Intermission features were provided by a group of dancers and the choral classes. The entire performance furnished the large and appreciative audience an afternoon of colorful and lively entertainment.

Eighth grade girls have placed their Civil War Scrapbooks on display in the Academy Library. Betty Lou Gordon, Ella Mary Murphy, Margaret McMahon and Betty Bauerly did outstanding work on their booklets.

The camera busily clicked Wednesday morning, April 12. The sessions posed in the reception room for their graduation pictures.

The weekly Lenten collection of pennies for St. Mary's Seminary Bourse closed April 5. The Seniors won in the high school class competition and St. Margaret's room in the grammar grades.

Value of Minerals to Your Health and Pocket Book

The soil doctor is your doctor. You starve your plants and they will starve you. Weak and diseased plants make a weak and diseased body. Scientists tell us that 97 to 98% of a plant comes from the air and that only 2 to 3% comes from the earth. This is mostly in the form of minerals which provides the strength and sinews of our plants so they can stand up. These same minerals provide the food for your teeth, bones and so forth, so you can stand up. Lack of minerals in your fields is what causes your cow to have tuberculosis; it causes her to lose her calf. Lack of minerals causes our women to lose their children. Lack of minerals keep you running to the dentist and doctor. Do you remember the natural rosy cheeks the girls used to have? Now they buy them at a drug store. Lack of minerals in our soil is costing the country hundreds of millions of dollars. It weakens our bodies so we are subject to all kinds of disease and the same things happens to plants. There is only one solution—mineralize your soil. Everything else you have tried has failed. Why not try Natural Mineral Plant Food and watch it bring your soil back to the virgin state. The air has the same food value, regardless of the kind of soil. You need Minerals to enable your plants to get this plant food. Thus you see why adding the right minerals to any kind of soil will produce good crops. You will not need to hunt around for just the proper kind of soil or bother with a lot of chemical analysis because the air is the same everywhere.

A recent article in the New Agriculture Magazine of San Francisco by A. H. Knowlton states: "People do not realize that they are being starved, no matter how rich they eat of the fruits and vegetables, raised on millions of acres of land, because of the lack of minerals in the soil." He further says that 99% of our American people are deficient in health because of the lack of proper minerals.

Dr. Charles North in his article on the "Modern Miracle Man" says that minerals are essential and vital to our health. A lack of minerals in our food results in the various diseases. He cites that the soil around a certain Midwestern city was so low in calcium that examination of three hundred children showed nearly 90% had bad teeth, 69% afflictions of the nose and throat, swollen glands and diseased tonsils. More than one-third had defective vision, round shoulders, bow-legs and anemia. He also states that we, as well as our cattle are running too large stomachs because we have to eat so

ON THE HUNT FOR TUBERCULOSIS

Colleges and schools throughout the country are this month taking part in the Early Diagnosis Campaign of the National Tuberculosis Association. Above is a college freshman having an X-ray taken of his lungs.

much food to get the necessary minerals.

Professor H. C. Sherman of Columbia University states that research has definitely proven that the reason our ancestors lived so long was because of the abundant supply of minerals in their food. He further states that calcium is the most important of these necessary minerals. Dr. Charles F. Church, Director of Nutrition in the Rockefeller Institute, in a recent article states that the resistance of a person to disease depends on the proper balance of minerals in his food. Tests with rats carried on by them showed that when the amount of Calcium was reduced one-fifth, the rate of fatality increased five times when exposed to infections. He also stated that the right mineralized diet for expectant mothers is very important in building up disease resistance in the child.

Dr. Emery C. Ingham, Head of the Ingham Clinic in the Meagley-Tichenor Building in Portland, Oregon, in a recent letter states that tests made by him in his own garden with our product, revealed the fact that his plants were not only healthier and harder but that he could not find a disease or pest on anything, and for the first time in his life he had no worms in his corn. He also stated that if the people realized the value of mineralized vegetables to their health that we should have no trouble selling every home owner. The ex-Dairy Inspector of the

State of Washington, who is also a veterinarian and a graduate of the State College of Pullman, Washington, makes the statement that chemical tests of the dung of cattle show that 90% of the ground bone, oyster shells, etc., fed them is not assimilated because the cow has no gizzard. Tests made by him with McKenzie's Natural Minerals show that practically none is left in the dung, because they are digested by nature's process during a period of some 25,000,000 years.

Mr. Lee VanDerlinden, Chemist for the Ohio Sugar Company, quotes from the 1937 year book of Agriculture, page 76, that American farmers in 1936 paid out more than \$7,500,000 for almost useless filler put in the so-called Commercial fertilizers. He also says that the Ohio Sugar Company is trying to teach the farmers that filler is a waste of money and a heavy drain on them in more ways than one. They not only are paying millions for nothing but are paying freight and hauling to their farms some 400,000 tons of almost useless material.

McKenzie's Natural Minerals have no filler. You receive nature's 100% full value.

McKenzie's sensational soil Revitalizer is a naturally colloidal mineral plant food that cannot be duplicated by man by manufacture. It is owned and mined from natural deposits by John H. McKenzie "The

Soil Doctor" It is sold in Portland at 2715 SW Kelly avenue, corner of Front and also from the warehouse at 2315 SW First avenue.
