

The use of heat in the treatment of disease is of ancient origin, but some of the older methods were uncertain. The modern method, a short wave diathermy, provides uniform heat in the deepest tissues and penetrates to the deepest seated disease area. This method is pleasant and comfortable—the surface of the skin is not duly heated, and the heating effect can be minutely controlled. Circulation is the essence of good health and short wave diathermy is the best means or promoting thorough circulation. Diathermy in the form of heat may now be had at prices all can afford. The younger son played several numbers on the guitar. He accompanied himself and sang one number. His sister and he rendered a vocal duet. The sister rendered numbers on an electric violin.
