HELP SAVE A LIFE

The circus fire tragedy at Hartford, Conn., is unusual in only one respect—it caused the death of an unusual number of people in one fire. And yet death was no more definite for each of those victims than it is for the individual who perishes in a farmhouse, or for one or two or three children who meet death in home fires almost every day.

Circus and most other fires could be prevented if each individual appointed himself a committee to see that every time he lit a match, smoked a cigarette or had anything to do with any appliance that caused heat, it was out or properly safeguarded, when he left it.

Our 10,000-year fire death toll could be largely eliminated if we would all learn a lesson from the Hartford disaster and be individually careful.

We have been assured that many people would buy property in Beaverton and erect good homes if they were sure that the land was in a restricted area. Beaverton city fathers could divide the city proper into districts, business and residence, with a restriction on the size, price, etc., of the building, as many cities now do.

What is a liberal? A man who has nothing and wants to share it with everyone.

"Only as the American economy profits can the individual profit. If we can succeed in making a bigger pie each one will get a bigger slice."—Walter D. Fuller, pres. Curtis Publishing Co.

The Low Down From Hickory Grove

I was glimpsing through a book by a gent from up in Saint Louis, and you know, that old "Show me" boy was brought up where the air was clear and clean. His thinkin' is keen. Says the 4 freedoms is okay as far as it goes but it limits freedom versus what we been told. Like telling your offshoot, he says, that he can play with his scooter and football and skates and horseshoes—you are slapping a 4 point limit on his play. That means his bicycle and baseball are taboo.

We didn't grow up and build the U. S. A. nation on a 4 point foundation. Anybody is free from want, and fear, and can talk to his hearts content, and worship as he chooses, even if locked in a jailhouse—they don't starve you there, or scare you, or keep you quiet.

We would be a hot outfit if we ever got the idea that limited freedom was good enough. How about what we do Saturday night, or freedom to fish or 1000 other freedoms we now have, including wearing a nightshirt versus pajamas or what?

Four freedoms is a skimpy kind of dish.

Yours with the low down,
JO SERRA

"To provide the machinery and equipment that have so greatly improved the lot of the American workers, a steady supply of new capital is required. Excessive taxation prevents this by discouraging the investment of capital in industry."—R. B. Dresser, in Railroad Worker's Journal.

Domestic Rabbits Spend Entire Life in Hutches

The domestic rabbit spends its entire life cycle in an individual compartment called a hutch. Outdoor hutches must have solid backs and sides, and a good roof as protection against rain, storm and snow. Indoor hutches, as in the garage, barn, or outbuilding, may have wire-mesh floors of five-eighths inch mesh hardware cloth, allowing the droppings to fall to the floor. This type is usually preferred by progressive rabbitmen, since they are self-cleaning, cooler in summer, and a great aid to disease prevention.

The floor space in hutches for breeding does should be 10 to 12 square feet—4 feet long and 24 to 30 inches deep. Hutch compartments for each doe range in height from 18 to 24 inches. Outdoor hutches usually have solid floors. In such case, straw or peat moss bedding is used, and each compartment must be cleaned at least twice weekly. If scrap lumber is used when possible, the cost of hutches should not exceed \$5.00 for each breeding doe, and are easily built by any saw and hammer carpenter.

Straw and Stubble

The burning of straw and stubble actually robs the soil of needed and necessary stability and fertility. The practice gives the land an ideal seed-off for a winter of washing and gullying because the stubble is too heavy to be readily incorporated into the soil, or the real value of it as a soil binder and fertilizer is not appreciated.

You may have learned by experience that in plowing under large amounts of straw, particularly in areas where rainfall is low, that the ground is apt to dry out and a reduction in yield results.

Someone may try to tell you that just as much fertility is returned through the ashes as through the unburned stubble. There is a difference though—because one ton of ordinary straw contains about 10 pounds of nitrogen, 2½ pounds of phosphoric acid and nearly 15 pounds of potash. In addition to this, about 1,950 pounds of actual organic material is contained in each ton. Now, if you burn the straw, you destroy all of the nitrogen and all of the organic material. This just goes up in smoke and is lost. The 2½ pounds of phosphoric acid and 15 pounds of potash will remain in the ashes and are returned to the soil.

In buying eggs or chicks for breeding stock, says Professor Bruckner, it is well to buy more than the number needed, so only the best will be kept for mixing with the home farm breeding birds.

Parents Should try to Protect Children from Polio

Parents have been advised by health authorities to make constant checks for headaches, fever, nausea, soreness of the throat, and stiffness of the neck until the end of the so-called polio season in late September. Other precautions are to travel as little as possible; keep them off buses; avoid crowds; keep them away from swimming pools unless it can be determined that contacts there or in camps are no greater than normal contacts at home.

Why Farmers Should Buy and Keep War Bonds

by R. R. Renne

President

Montana State College

BUILDING financial reserves, paying off debts, helping to fight dangerous inflation, and patriotism, are all good reasons why farmers should buy and hold War Bonds.

A good financial reserve is an important part of sound farm management. War Bonds are safe investments and are almost as liquid as cash. Thus, they comprise an excellent financial reserve for unexpected needs and emergencies. After the last war prices fell rapidly, as they have after every major war, and thousands of American farmers lost their farms because they could not weather the economic storm. No other factor is more essential for continued satisfactory farm operations, through good years and bad, than adequate financial reserves.

In addition to unexpected needs for emergencies, farmers need adequate reserves to finance repairs, replacements and improvements around the farm. Difficulties in obtaining needed materials and labor for these expenditures cause farm buildings and equipment to wear out faster during the war period than in peacetime. If farmers can wait until sometime after the war ends to make these repairs and improvements, their dollars should go farther than they will immediately following the war, and better quality materials will probably be available. Moreover, too rapid or forced cashing of War Bonds immediately after the war could create a serious situation and contribute to post-war inflation. Also, holding Bonds to maturity makes it possible for the farmer to increase his investment by one-fourth through accumulated interest. Still another reason for having a good reserve in the form of War Bonds is that funds will be available for the boy when they return, to assist them in getting established in peacetime pursuits.

Many farmers still have long-term mortgage debt outstanding against their property.

Investment in War Bonds now makes it possible for the farmer to help finance the war and at the same time accumulate the funds which will enable him to liquidate his debt in a lump sum after the war. Systematic purchase of War Bonds furnishes a very orderly and sure way of accumulating the necessary funds for liquidation of debt that requires large lump sums for settlement.

The extremely heavy expenditures required to carry on modern total war creates high purchasing power, which combined with shortages of materials and labor, cause serious inflationary threats. Most farmers can remember the very high prices which occurred during the last war and the very low prices and depression which followed. With the present scale of operations much greater than during the first war, it is imperative that widespread inflation in general prices and in land be prevented. Using surplus funds to purchase War Bonds helps reduce inflationary pressure in commodity markets and, at the same time, helps finance the war.

Building financial reserves, paying off debts and fighting inflation, comprise adequate reasons for buying War Bonds. However, there is still another major reason why farmers should invest in War Bonds until it hurts and this is the patriotic reason. We are engaged in a very serious struggle to preserve democracy and our way of life. The sooner we can win this war the fewer lives of our sons and daughters will be lost. Our youth are making great sacrifices on the battlefronts all over the world, and it is up to each one of us on the homefront to give all we have. Large sums of money are needed for winning the war and if we will all buy War Bonds to the limit of our resources voluntarily, we can help finish the war at an early date.

Babson Says . . .

Continued from Page 1

may continue their present show of strength as Germany's defeat draws nearer. Because of the almost constant political upsets, characteristic of the Latin-American countries, South American bonds have never appealed to me. There are far better opportunities in our own domestic securities than in foreign governments or industrial.

Medium-Grade Bonds

With continued heavy calling of top-grade corporation bonds, the dwindling supply of these issues, plus their low yields, resulted some two years ago in attention being focussed upon medium-grade industrial, utility and rail bonds. All of these groups have had substantial rises since the middle of 1942; but the price of many medium-grade industrials are now flattening out. This is also true of medium-grade rail bonds, while medium-grade utilities have actually turned slightly downward in the past two months.

Of all the medium-grade groups, perhaps the utilities offer the best opportunity at the moment. Entirely aside from the cleaning up of the balance sheets of many utility companies, it must be remembered that we are in an Election Year. If the War ends prior to November and the Dewey-Bricker ticket has a resulting good chance of being elected, then utility bonds, let alone utility stocks, should enjoy great popularity. In fact, from a psychological point of view, utility bonds may rise anyway.

Railroad Bonds

Disregarding top-grade railroad bonds, second-grade rail issues may show further strength insofar as well placed issues are concerned. Unquestionably, the financial position of most railroad companies has been greatly improved. Many short-maturity issues have been bought in by the railroad companies and interest charges after the War may be considerably less for many roads than was true in pre-war days. On the other hand, traffic is bound to fall off and many second-grade rail bonds should sell for less than at present.

Defaulted Rail Bonds

Since the earlier months of the year, defaulted rail bonds have not shown the activity that was characteristic of them in 1943. In fact, for the past several months, they have moved in a distinct sideways direction. Some of these bonds are now selling well under the estimated work-out values for the new bonds, preferred stock and common stock that will be issued upon the termination of receivership. The purchase of defaulted rail bonds always requires both study and courage. The profit cream may be off such issues but there may be considerable milk still left in the defaulted railroad bond bottle.

Long-Pull Outlook

For all bonds, except possibly for certain rail bonds, the long-term trend of bond prices is downward. Any decline, however, will be gradual. Until the tax laws change, we will see little change in the situation with respect to tax-exempt issues. Low-grade rail bonds are probably the most vulnerable of all issues for they may early reflect the decrease in rail tonnage which peace is bound to bring. Least affected should be the long-pull transcontinental roads. Bonds of short-haul Eastern roads may all be a better sale today than they are a buy!

Average Speed of 50 Miles An Hour Reported

Speed checks maintained on the Pacific highway showed that 85 per cent of the motorists using the highway during the month of June traveled up to 50 miles an hour, according to Secretary of State Farrell. The lowest speed was 47 miles an hour. Farrell warns motorists that as the tires get older and as the summer heat adds to the heat generated by friction, high speeds become increasingly dangerous. The life of a tire at 50 miles an hour is only half of what it is at 30 miles an hour. Older tires are more susceptible to deterioration from heat than new ones. So in the interests of tire conservation and accident prevention, let's hold our speed under 35 miles wartime speed limit.

According to the AAA program, only dealers who have signed Memorandum of Understanding for handling the 1944 cover crop seed will be eligible to sell individual lots of seed to the AAA. All purchases will be made on the basis of reclaimed and, where necessary, fumigated and packaged in bags of approved size and quality and at last year's handling charges.

Be Well Dressed—Save Bond Money

Pinafores have come out of the nursery and taken the place they deserve in fashion. Besides being flattering and practical for warm weather, they are easy to make—an ideal choice for a beginner's sewing project. The ruffled, be-ribboned pinafore pictured here is especially beguiling, and can be worn with or without a blouse. Make it yourself and put the money you save into War Bonds. The pattern may be secured at your local store. Back the Attack—Buy More Than Before.

New Blood Treatment

For Wounds Is Found

MOSCOW. — A new method of treating wounds by adding blood to them has been discovered by a 73-year-old Russian scientist—Prof. Olga Lepeshinskaya—through study of the role of live substance in the process of healing. Tass news agency reported. Professor Lepeshinskaya is head of the histology department of Moscow state university. She is the author of 83 scientific works.

Gay Jumpers and War Bond Savings

Pinafore jumpers are the bright stars of summer fashion. You will look fresh as a daisy in gaily flowered cotton jumpers, and white peasant blouses. They can be dressy, too, when made of soft rayon and worn with a frilly blouse. This pinafore is such a simple style to make that you will want several for all-occasion wear. Sewing for yourself is saving to buy more War Bonds. This or a similar pattern is available at your local stores. Back the Attack—Buy More Than Before.

Broke Up Funeral

Christ broke up the funeral, for He had compassion on the widowed mother whose only son was to be laid away.

—HALT!

The stretcher bearers stood still as Christ stepped forward and commanded—"Young man, I say unto thee arise." And he that was dead sat up and Christ delivered him to his mother.

Just so, Christ is to raise back to life, all who ever lived on this earth, from Adam down.—"All that are in the graves shall hear His voice and shall come forth."—BIBLE.

TWO RESURRECTIONS—In the first resurrection, those will be raised whose sins have been put under the blood of Christ. And the last dead will be raised a thousand years later, to meet their sins and judgment. The First Resurrection—"He that believeth on the Son hath eternal life." The Second Resurrection raises those who have not believed.—"They shall not see life but the wrath of God abideth on them," says the Bible. Reject the Gift and you come under wrath—You lie in a Christless grave awaiting Judgment Day.

First Resurrection Folks—You are in the world but not of it—You have broken with the world—You are separated unto Christ—You love the Lord's people. Again—You take time for the Bible and prayer—Next—You wait on Christ for the power to live to the glory of God.

Are you of the saved or shall you come forth after, to meet your sins and judgment?

Irvin Taylor.

AMERICAN HEROES

BY LEFF

August Friberg, Chief Engineer, Beaumont, Texas, forced his way along the outside rail of his flaming, torpedoed tanker. He fought flames with steam. His action saved the lives of crew members who would have perished otherwise, and he has won the Merchant Marine Distinguished Service Medal. Have you bought a War Bond this payday?
