**The Dog's Tail**

Many and complex are the problems confronting a small city. With a growth in population all of the facilities conducive to public safety, health, education and community advancement must be considered and provided for.

A rapidly growing town must of necessity provide streets suitable for handling an increased number of people. Lighting must be adequate to provide comfort and protection.

Public health is the primary factor and the two most necessary functions of a city are to provide sufficient quantities of good water and proper sewage disposal. These are MUST issues and cannot be disregarded. Without them a city will be stopped in its tracks. We must not forget one of the primary reasons for the growth of outlying sections is the attraction of the freedom and more healthful surroundings possible in a well organized small town. Schooling facilities must be ade-

**Three In One**

Yes.—Electricity lights the room. It is light. And electricity runs the washing machine. It is power. Then you plug in the iron and have heat. It is light, power and heat. Three in one. So is electricity. This helps us see God thru the eye of the Bible. The BIBLE tells of God the Father God the Son and God the Holy Spirit. Not three Gods but One God as seen in three ways.

quate to provide all necessary educational advantages for our children. Parks and recreational facilities must be included in the plans for a well-rounded civic life.

We must not forget all such improvements are costly and a well developed municipality must weigh the burden of required taxation so that "the tail never wags the dog."

"No wage is too high that is earned."—Henry Ford.

"The logical way to do it is to see our free enterprise system works."—Wenatchee Journal.

"Agriculture wants to be on a self-supporting basis—not dependent upon government."—Albert S. Goss, Master, National Grange.

FIRST—God the Father. For his own glory the Father wills whatever comes to pass. Even the sparrows, for Jesus said—"Not one of them is forgotten in the sight of God."  
NEXT—God the Son. He is Christ, our Lord. Whatever the Father wills, Christ the Son brings to pass. He created and upholds the universe and is the owner thereof. KNOW YOUR BIBLE. By the will of the Father, Christ the Son tasted death for every man.  
ALSO—God the Holy Spirit. When Christ had died for our sins and had ascended back to glory, He sent God the Holy Spirit to convict us of our lost state. We go on lost until we possess Christ, the Lamb of God, slain for our sins.  
A mystery. Three Persons in One. God the Father, God the Son and God the Holy Spirit. Three in One, equal in power and glory and waiting to give you victory for here and now and eternal life for the ages to come. —O Happy Day that fixed my choice on Thee, my Saviour and my God.

**WILLAMETTE VALLEY RAINFALL**

AVERAGE PRECIPITATION IN INCHES BY MONTHS

**Why IRRIGATION is a Big Business in the Willamette Valley**

Irrigation is a big business in the Willamette Valley. But it is destined to grow bigger—much bigger. When you look at the above chart showing the average annual rainfall by months in the Willamette Valley, you realize some amazing facts which upset popular beliefs about Oregon's climate.

For instance, we think of the Willamette Valley as having a rainy climate—as being a "Green Land," and we do have a heavy rainfall in the winter months.

But we have a corresponding deficiency of rainfall in the six summer months. Look at these figures showing the average rainfall in the Willamette Valley by months (45-year average):

WET MONTHS		DRY MONTHS	
October.....	3.81	April.....	2.82
November.....	7.28	May.....	2.12
December.....	6.88	June.....	1.45
January.....	6.88	July.....	.50
February.....	5.30	August.....	.45
March.....	4.26	September.....	1.93
	32.41		10.27

What do these figures mean? They mean that the verdure you see in the summertime is mostly trees—both evergreen and deciduous. They mean that Oregon is particularly well adapted to growing trees or tree crops because trees can send their roots deep enough to get

moisture; and for seed crops which the dry summer months aid in ripening. But for pasture, for green beans, for berries, and vegetables, and various other crops, late spring and summer irrigation is an essential. Irrigation increases pasture yields by as much as 9 to 1. Tomatoes, string beans, and many other vegetables show increased yields of several hundred per cent when irrigated. Such increases in production resulting merely from the addition of water show the remarkable opportunities that exist for improving both the quantity and quality of our agricultural products through irrigation.

PGE is calling public attention to irrigation in the Willamette Valley because it is one of the region's greatest opportunities for creating new wealth that will benefit all of us who live and work here. PGE plans to do a lot of talking about this and other opportunities which exist for making more profitable our agriculture, manufacturing, retail business and home living.

Nor does PGE stop at merely "talking up" the area it serves. PGE believes in doing, too. It pioneered, for instance, many of the applications of electric power to the job of irrigation now in use on Willamette Valley farms. Its rural service men, experts in their field, are constantly at work advising farmers who seek more profitable ways of operating.

Through its agricultural service department PGE offers a free consultation and advisory service on irrigation and other operations applying electricity to the farm.
