Until we try we don't know what we can do, and that's why some

people have such a good opinion of themselves.

By studying the past we can get a pretty accurate idea of the future.

BANK ROBBERS ENGINEERS

An industrious bank-robbing firm showed its hand in a Pacific coast city. The robbers entered a five-foot storm drain through a man-hole more than a mile distant. Directly in front of the bank they cut a two-foot hole through the six-inch concrete wall of the drain and then burrowed 46 feet underground until they got directly beneath the bank's inner vault. There they drilled up through a 12-inch reinforced concrete floor and came out in the exact center of the place

they started for. It is believed that the job must have been planned by an architect or structural engineer who had a set of plans of the bank and knew exactly how to take advantage of them.
