Salemite Takes Over 'Gate Antimony Mine

The antimony mines on upper Applegate, unused since World war days, have been taken over by Walter Robinson, mining engineer of Salem, who expects to reopen the holdings in a short time.

During the war several carloads of the ore were taken from the mines, which are located on a mountain back of the Dorn place. Mr. Robinson formerly worked at the Blue Ledge mine here as an engineer.

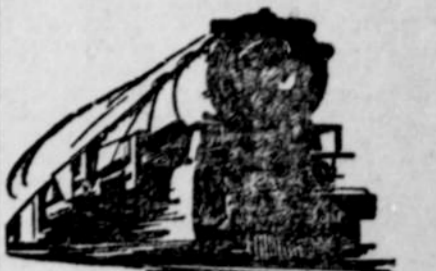

Antimony, a metal which has the peculiar quality of shrinking with heat and expanding as it

is chilled, is used extensively in the printing industry, being one of the alloys used to prepare lead for typesetting machine use.
