Removing Partition Between the Rooms

HAVE you ever thought of removing the partition between your living and dining room but feared the ceiling would sag if supports were removed? Or, perhaps you have considered the idea and decided that after all it might not always be convenient to have the two rooms in one? Here is an answer to both of these questions. The sketch shows the partition removed to give a greater feeling of space but the main supports

have been left in. A balustrade between the two rooms makes a division without spoiling the light airy effect and a draw curtain matching the living room draperies make it possible to shut the dining room off when desired. By the clever use of curtaining throughout the two rooms are drawn together though they are still separate units.

NOTE—Here is news for homemakers. This sketch is from a new booklet by Mrs. Spears called MAKE YOUR OWN CURTAINS. This 32-page book is full of smart new curtain and drapery ideas with illustrated step-by-step directions for measuring, cutting, making and hanging all types from the simplest sash curtain to the most complicated lined over-drapery or stiffened valance. Whatever your curtain problem here is the answer. Order book by name and enclose 15 cents. Address:

SNAPPY FACTS ABOUT RUBBER

John L. Collier, president of the B. F. Goodrich Co., believes that it will be at least two years after the first recapture of Far East rubber-producing territories before normal operations can be restored. Meanwhile, synthetic and the constantly decreasing amount of natural rubber in the U. S. will have to take care of our requirements.

Every time an escort of 1,000 fighter planes goes into action on the battle front or on a bombing raid, some 50 tons of rubber are being carried into the air. The U. S. War Department figures show that the average fighter plane has 105 pounds of rubber somewhere in its construction.
