PERSONAL

PLATE USERS: Give your mouth a treat! "CAMCO" Dental Plate Reliner restores original comfortable fit. Odorless. Tasteless. Not an adhesive. Will not dissolve in mouth. Easy to apply. \$2.00 per pair. Cathay American Co., San Francisco 11, Cal.

'Double 85' Treatment

After digging, start the curing of the promising sweet potatoes by giving them the "double 85" treatment. The "double 85" treatment consists of preliminary holding for six to eight days at 85 degrees and 85 per cent humidity. Prompt curing brings about changes that make the potatoes more resistant to storage disorders for as long as six to eight months. Storage temperature following curing should be 55 to 60 degrees.

Amber Formed Long Ago

Amber has been prized from time immemorial for its delicate color, its translucency, and its soft, pleasing luster. It is classed with the semi-precious stones although it is not a stone but a fossil resin of vegetable origin. This resin exuded from now extinct species of pines which grew in Lower Oligocene time, 35 million years ago, much as the "spruce gum" chewed by country children exudes from the spruce.

Left-Over Potatoes

Use left-over mashed potatoes to line the sides of a baking dish for a meat pie. Fill the center with well-seasoned stew of vegetable and left-over bits of meat or fish. Cover the top with mashed potatoes. Bake in a hot oven until the pie is hot through and browned lightly on top. Make only the upper crust if you have a small portion of mashed potatoes.

Plant Evolution

Knowledge of modern horticulture and development of plant strains led scientists to estimate 20,000 years as the time required to produce from wild grasses the various kinds of corn we grow today.

First Submarine Cable

In 1843, Samuel Colt, American inventor, laid the first submarine cable, an insulated copper wire, in New York harbor between the Battery and Governor's island.

Woodpecker Toll Heavy

A power company reports that damage by woodpeckers makes necessary the replacement of at least 100 of its poles each year.

Garnishing Foods

Stick a toothpick through a clove of garlic for submersion in cooked foods and salads. Then it can be fished out easily before serving time.

Fireplaces Lack Efficiency

Fireplaces have an efficiency of only 10 per cent, so their value consists primarily in the homelike or cheerful atmosphere they create.

Cause of Poor Butter

Failure of many producers to cool cream properly is one of the primary causes of low-quality butter.

Timber Variety

One 80-acre farm in Vermilion county in Illinois was found to have 30 different species of trees.

Music While You Work

According to the Britannica Book of the Year, experimentation in "music-while-you-work," an industrial music project first developed by the British government for war workers and adopted widely in factories and offices in this country, demonstrated that fast music does not mean fast work. A sharply defined melody is preferable to rich orchestration, the Book of the Year points out, and instrumental music is preferred for industrial use because spoken words often distract the worker-listener.

MISCELLANEOUS

FOR SALE—Fixtures for Shake Shop and Sandwich Shop, 174th & S. E. Stark Avenue, Breils Shake Shop, Portland, Oregon.

NEW SAWMILLS available for immediate shipment, being built by experienced operators. Some of the outstanding features: This mill is especially designed for cutting second growth or small size West Coast Timber. Heavy duty, semi-portable, can be set up on a permanent foundation in the woods and powered by Diesel or gasoline motors. This mill is fast enough to cut small logs and rugged enough to cut logs up to 4' as the head blocks open 48". All steel construction, ball bearings where ball bearings are needed, top saw rig, capable of carrying a 48" top saw and 60" bottom saw, has a friction feed, capable of cutting 30,000' lumber per 8 hour shift. Has fast eight inch belt feed. Many additional features gained by 40 years of practical sawmill experience by its builders. This mill can be shipped by rail or better still by fast stake bodied truck. For literature and further information address Ogilvie-Ribbar Manufacturing Company, 1417 West 3rd St., Austin, Texas. Tel. B-3274.

COLUMBIA & OKANOGAN NURSERY CO., WENATCHEE, WASHINGTON

Test Eyes

It's easy to demonstrate that you can see better with two eyes than with one. Make a mark on a piece of white paper. With both eyes open, it is not difficult to jab a pencil right on the mark. But close one eye and you will find it hard to guide the pencil to the mark, says the Better Vision Institute. Two eyes give us what is known as binocular vision. This provides a third dimension to our seeing, helps us to judge distances and the size of objects.

Perspiration Odors

Perspiration odors sometimes can be removed from garments that are not yet ready for the laundry or dry cleaner. Sponge the spot with warm water to which a few drops of vinegar have been added. Sprinkle with powdered pepsin, working the pepsin into the cloth. Then let stand one to two hours, keeping the spot moist. Brush off the powder and rinse well.

Boxes Strongly Made

Those familiar folding paper boxes which are used to package food items and other consumer products generally contain three separate layers of paperboard. The outside surface is known in the trade as the top liner, the inside as the inner liner and the center is called the filler. Some boxes are made of several layers of various kinds of paper.

Pasteurizing Milk

Pasteurization is a process named for Louis Pasteur, scientist, by which every particle of milk is heated to not lower than 142 degrees for not less than 30 minutes, and then promptly cooled to 50 degrees or lower to destroy any harmful bacteria that may be present, without affecting flavor and food value.

Depend on Pollination

More than a score of fruits and more than 30 seed crops depend on insects for pollination. Most of the fruits are consumed directly as food, as are many of the vegetables. Several field crops—particularly legumes—are important as animal feeds and in rotation farming to maintain fertility in the soils.

Transplanting Perennials

There are many kinds of perennial flowers that do best when transplanted in the fall. Those perennials that bloom early in the spring and summer should be transplanted in early fall so that the roots may become established before freezing weather. This is especially true of Oriental poppy and the peony. Other flowers such as columbine, narcissus or daffodil, tulip, lily, bleeding heart, and Virginia bluebell should be planted somewhat later but several weeks in advance of freezing weather.
