Rattlers Won't Tell
Popular supposition has it that the number of rattles borne by a snake indicates its age in years. A new rattle is required each time that a snake sheds its skin and several rattles may be added annually, the California Fish and Game commission reports. The studies indicate that young snakes in their year of growth gain, besides the original button, two to four rattles. Medium-sized snakes, during their second or third year, often gain two rattles annually. Adults most frequently add only one rattle a year, but sometimes gain two.
