Best way to spruce up a telephone is with a soft, dry cloth... never with water, or any other liquid.

HOW TO TREAT YOUR TELEPHONE

Suggestions to help protect your service

1. A twisted cord can lead to trouble. Although the
wires are especially designed for flexibility, too many
twists and kinks may eventually break them and inter-
fere with service until a repairman can call. Good
idea to get the curls out by letting the receiver dangle
and unwind by itself... then keep them out by
remembering, each time you call, not to put turns in
the cord as you handle the receiver.

2. It's built to take it... but your telephone can
develop ailments if it's dropped. So make sure the
stand it sits on is solid and is in a spot where it won't
be accidentally bumped. Other ways to help protect
service: Avoid "gadget" attachments for your tele-
phone... keep cords clear of doorways where they
may be pinched... and always keep water away from
wires and fittings.

3. Did you ever stop to think that your telephone
is one service or piece of equipment in your home
that's repaired and maintained for life at no extra cost
to you? This maintenance is one of the values in-
cluded in the rates you pay for service... rates that
make it one of your really good buys today.

Your telephone is one of
today's best bargains
