

Potency Means Power

If it requires ten-horse power to start a certain piece of machinery, a nine-horse power engine won't answer. It will be no better than no engine at all. You must provide additional force or all of your power will be wasted.

SO IN MEDICINE—

If a drug of a certain strength or potency is required to stop the progress of disease, a weaker drug will be no better than no drug at all. We think of these things. That is why you can always see products of the world's best chemists on our shelves.

The drugs which we handle are pure and of standard strength.
