

SOME THOUGHTS ON ANNEXATION
(Continued from Page One)

page one's sense of honor. Springfield has had a number of hard jolts in the past few years. The big mill burned, and was idle three years. The plans of the railroad to finish the Natron line which they had been pushing from both ends, and to build at Springfield the great shops which the completed system would require, has been checked by a succession of untoward events which we cannot and need not recite here. None of these things were any fault of Springfield or its people. They did not come because of its people, its location or the fact that it was not a part of Eugene. Now this long delayed, much hindered plan is about to be carried out. If you want proof, ask your prompters. They believe in it.

And now that dawn of a better day is already breaking, and hope is again springing in the breast of every forward-looking Springfielder, high and low, it will become a citizen of this town, who, no doubt, in most cases, has been helped by the town as much as he has helped it, to stand on the curb or in public places and belittle the town because it has not become a great town, and make fun of it because of the sorry spectacle it presented while it was going through these struggles. Such a course is not likely to strengthen the one who does it in the affections and confidence of the people of Springfield.

If men are infatuated with the notion of being citizens of a big town, and a town with big institutions, there is the simplest kind of a way to settle the matter in a manner entirely satisfactory to all concerned. If a man wants to be annexed, let him be annexed. But let him leave the rest alone. Let him not seek to interfere with the development of the town he professes to so much despise. But we advise him to make sure first that the people of Eugene are agreed to it. They may think he can be of more service to them where he is.

A NEW CANDIDATE AND HIS PLATFORM
(Continued from page one)

responsible to them for efficient work. If elected county commissioner, I would insist upon getting a dollar's worth of road for the dollar expended, which I believe we are not receiving under the present system.

The above criticisms with their remedies are offered to the taxpayers for their decision, and with my assurance to them that I will use my best endeavors to put them into practice, as well as many other economies too numerous to mention here, which could be put into practice without interference with efficient service, and which savings I believe should be put into good roads and to keep them good.

Chamberlain's Cough Remedy Aids Nature

Medicines that aid nature are always most effectual. Chamberlain's Cough Remedy acts on this plan. It allays the cough, relieves the lungs, aids expectoration, opens the secretions and aids nature in restoring the system to a healthy condition. Thousands have testified to its good qualities. Try it when you have a cough or cold.

W. O. W. meets every Tuesday evening at W. O. W. hall.

Your Teeth

(By Ros Procter McGee, M.D. D.D.S.)

Temporary Teeth—When They are Abscessed

If you had a pet rattlesnake around the house it might not do you any harm, but of course you could not reach an agreement upon that subject with the limited brain power of the snake and so you would be taking a big chance that the armistice would be broken.

Your child could have one or even several abscessed temporary teeth with no apparent injury to his general health, but what assurance have you that the apparently harmless collection of pus is not poisoning the child? When the abscess really strikes and becomes acute, then there is no question about the damage it does.

Then abscesses may not only cause rheumatism and heart inflammations but the eyes and kidneys and any or all of the bodily structures may be attacked.

When a temporary tooth abscess burrows down the inside of the jaw and gets behind one of the protective walls of fibrous material that separates the layers of muscle in the neck, called the cervical fascia, a very serious infection develops which is frequently fatal.

In order to save the life of the child a very delicate operation must be performed, and that quickly. Don't take chances with abscesses of the temporary teeth. They are not only very dangerous, but the abscessed teeth cannot be used and the good teeth are not allowed to do their work because one tender spot in the mouth will interfere with chewing.

Of course, the best plan to avoid abscesses of the baby teeth is to take good care of children's teeth from the day they appear.

This is the easy method and it is also the safe sure method. Therefore it is the common sense method. Begin at the beginning. Later may be too late.

PRUNE! PRUNES! PRUNES!

Twenty-one thousand five hundred and fifty 25 pound boxes of 30-40 Italian prunes are being shipped to eastern and foreign markets this week by the Oregon Growers Cooperative association. The prunes are being assembled at Portland from various Willamette valley packing houses, pending shipment by boat way of the Panama canal. Buyers are requiring water shipments to be made due to the extreme low rates which have been prevailing recently. Water shipments make it possible to deliver the prunes at various eastern and European markets averaging one cent per pound less than when shipped by rail over-land.

It is reported that there is a limited holding of prunes in the first hand market on the west coast, which indicates an early clean-up. The small buyers in the eastern markets are offering prunes at prices somewhat lower than is quoted which tends to render the market unstable, but it is expected that these buyers will soon be sold out resulting in a firmer market. At present there is a good demand but buying is done in a small way.

The Oregon Growers association is making an advance up to three cents this week to their loganberry mem-

bers. This is the third advance this year on logans and there is still an other advance forthcoming. Loganberry pools have not closed on account of some canned goods still on hand.

The association handled over 2,400,000 pounds of logans this year and with the large acreage coming into bearing and the acreage signed up this winter, this tonnage will be greatly increased.

The freight rate between Medford and Salem applying to cull apples has been reduced from \$6.50 per ton to \$5.00 per ton due to the efforts of the traffic department of the Oregon Growers Cooperative association. Effective January 1st, the rate was prohibitive insofar as shipping cull apples to local markets was concerned. The railroad in order to aid in marketing this fruit agreed to establish a temporary rate of 25 cents per hundred for 30 days duration, effective February 3rd—minimum carload weight to remain the same, 40,000 pounds. This, though not a great reduction, will materially reduce transportation costs.

The Oregon Growers association is making an advance up to three cents this week to their loganberry mem-

Edited by the Pupils of Springfield High School
Program Given by High School

A short program was given at the High school Wednesday morning in honor of Washington's birthday. The Junior High boys of Lincoln and the Junior High boys of Eugene had a game of basketball in the afternoon. To fill up time until this exciting game started, the boys and girls of the High school planted trees along the school premises. Arbor Day fell on the examination week and made it impossible to observe it on that day.

We take this opportunity of telling Harry Harbert that he is greatly missed from English VI class.

The baseball season will soon open. Mack says that his arm is strong this year—so we have noticed!

The Ancient history class has increased from about twenty to thirty-four between semesters.

By the way the new frosh act like they were enjoying themselves and new ones keep coming.

By a Frosh
The sheep are in the meadow,
The cows are in the grass
Not all the narrow minded folks
Are in the freshmen class.

"It pays to advertise" in the Tattler, according to Prof. Torbet. The thermometer advertised for in the last issue has been returned to its usual place though somewhat changed in appearance. The temperature now stands permanently at 100 degrees. A reward of one dollar (\$1.00) will be paid to the party giving information leading to the arrest of the mercurial doctor.

Iva Day belongs to the freshman class. Her nose is as thin as a piece of glass. With her ears cut short
And her hair cut long.
She looks like Day when its almost Dawn.

We, the sophomores, were favored by a speech from Loren Edmiston. He informed us that beans could be cooked in a fireless cooker.

Alice Mortensen was absent from Latin IV class Tuesday afternoon. We missed her because the rest of us had

employees who have been sick, and to any place where it is felt a little music would bring cheer.

FINEST SCALES IN U. S. LOCATED AT OAKLAND
One of the best scales in use in the United States is the master scale owned by the Southern Pacific company at West Oakland, and which recently passed the stringent government tests and regulations. After undergoing 155 tests with weights of from one pound to eighty thousand pounds, the scale showed an accuracy of within one and six-tenths pounds, being well within the tolerance allowance of six pounds for 80,000 pounds, and was able to keep balance while the 80,000 pounds was being run on and off the scale without being wedged.

The scale is used for weighing accurately the railroad track scale test cars, is 16 feet in length and is installed in a 14 foot water proof scale pit, this care being necessary because of the sensitiveness of the huge instrument. The scale is used about six or eight times a year when the California state department of weights and measures conducts the weighing of all track scale test cars. These test cars are used to test all Southern Pacific and privately owned track scales.

MUSIC MADE FEATURE AT SACRAMENTO SHOPS

Employees of the Southern Pacific general shops at Sacramento are elated over the success of their excellent musical organizations, consisting of a 28 piece band and a glee club of 48 voices, which have been developed at the shops and which have attracted favorable attention in many sections of the state during the last few years. Although organized as recently as 1917 during the Liberty Loan drives, the organizations have made great strides.

In a little over four years these two organizations have raised over \$14,000 for charitable purposes, have built up a music library valued at over \$3,000, and have equipped themselves with uniforms valued at several thousand dollars. Both organizations are under the direction of J. E. Wedia, foreman of locomotive machine shop No. 1, at Sacramento.

One of the customs of the glee club which has won approval is the Christmas carol singing. On Christmas morning at 5 o'clock the club makes the rounds of all the hospitals, city and county jails, to the homes of shop-

We are all hoping poor little Bun will soon be back, for Viola's heart is nearly broken.

The dramatics class is practicing "The Irish Rose" indulgently, and several of the members are now talking Irish brogue very fluently.

The boy's basketball team will play Creswell High at Creswell Friday night.

Abbie: "I told Chick he wasn't to see me any more."
Audrey: "What did he do?"
Abbie: "He turned out the light."

Alice Tomsett has been absent from school on account of illness. We hope to see her again soon.

We were glad to see "Aunt" Mattie back Monday.

The study hall is quite crowded now, there are so many new students entering.

You should have seen little green frosh turn around and stare when they discovered Mabel Humphrey, a junior, in their Ancient history class. Probably they had never seen an upper-classman at close range before.

Mac seems to think he has a crush on keeping folks quiet but—when the cat's away, the mice will play.

Miss Williamson had better watch out. Mac was talking to one of the university girls the other day.

The general science class had a little dispute about Darwin's theory of evolution and Charline L. said, "I don't believe I ever was a monkey but I might be one yet." Evidently her future doesn't look very bright.

Several senior girls were setting a fine example for the frosh. They were walking down Main street with suckers in their mouths.

Adelaide said anybody could have Ralph but she wanted Clarence C. But Ralph is so busy with his little "Irish Rose" that he shouldn't mind.

I wonder what is so attractive up in the balcony? Carrybell and Gardner were seen up there. I suppose it is the new seats.

FARM REMINDERS

Pomeranian white globe turnips stay palatable longer than the cow horn turnips in tests at the Astoria branch station. They also yielded 4 tons more roots to the acre.—O. A. C. experiment station.

Buckwheat Good Crop
Buckwheat makes a good honey plant and gives good yields of seed in Oregon. Buckwheat grain is good for stock and poultry when used with other feeds. The Japanese variety is a good yielder but silver hull is a little plumper. Sow at the rate of 45 pounds per acre after the danger of frost is over.

Lime Sulphur gets Twig Miner
It is the exceptional orchard of prunes or peaches in which the twig miner is not sufficiently injurious to warrant the application of lime-sulphur 1 to 8 in February or March for its control. The symmetry of young trees is often seriously affected by this twig miner aside from the injury to twigs and fruits of bearing trees. Where dormant application is carefully made, 95 to 98 per cent efficiency may be expected. Summer applications are practically worthless.—O. A. C. experiment station.

NOTICE FOR PUBLICATION

U. S. Land office at Roseburg, Oregon, January 19, 1922.

Notice is hereby given that Ray O. Rennie, of R. F. D. No. 2, Springfield, Oregon, who, on May 10, 1920, made homestead entry, serial No. 012510, for the 3 1/2 of 3 1/2 of section 17, township 17S, range 1W, Willamette Meridian, has filed notice of intention to make final three-year proof, to establish claim to the land above described before E. O. Immel, U. S. Commissioner, at his office at Eugene, Oregon, on the 3rd day of March, 1922.

Claimant names as witnesses: James N. Hill of Route 2, Springfield, Oregon; Cass Millican, of Route 2, Springfield, Oregon; C. R. Mead, of Route 2, Springfield, Oregon; William M. Rennie of Route 2, Springfield, Oregon.

W. H. CANNON, Register.

GARDEN NOTES

Gardening is one of the oldest of human occupations and in some degree either for profit or for recreation and to provide fresh vegetables for the home table.

Almost anyone can plant seeds, and if he does not treat them too cruelly, they will grow, but to be a successful gardener requires skill, knowledge and experience. It must be remembered that plants are living things—that they breathe, drink and eat, that if their surroundings are congenial, they will thrive, but if uncongenial, they will struggle along between life and death, and although they may finally reach maturity, they will never reach the state of perfection which will make the gardener proud of his achievement.

It is really surprising that plants thrive as well as they do sometimes under adverse conditions. Naturally,

PROPORTION OF COST OF GRADING AND PAVING

A bulletin issued by the department of agriculture gives the statistics dealing with one of the questions often raised, as to the costs of different parts of the structure of a paved road: "What part of the cost of a road goes into grading and structures that are more or less permanent, and what part goes into the paving, which may eventually wear out." Statistics are given from the Bureau of Public Roads on 1350 completed Federal-aid roads, involving 7500 miles of road, of a total cost of \$112,000,000. Of this total, 21 per cent went into grading, 14 per cent into structure, 62 per cent into paving and 3 per cent into engineering.

These are average figures for the whole United States, but the proportions of cost vary greatly in different sections. In the middle Atlantic states, where grading is not heavy, and paving must be built for heavy traffic, the cost of paving is as high as 75 per cent and the grading and structures as low as 15 and 9 per cent respectively. In the mountain states, much of the work is new construction, with heavy grading, and the highest type of surface is not necessary. In these states, the cost of grading reached 30 per cent, cost of structure 26 per cent, and the cost of paving was as low as 42 per cent.

the first requisite is good seed, but there is little danger in buying good seed from reliable seedsmen who test all seeds sold. It never pays to buy cheap seed as the little saved would be insignificant compared with a crop failure.

Life in a seed is wonderfully persistent but there are some obstacles it cannot overcome. In most of the cases where failure is commonly attributed to poor seed the real cause is due to carelessness in planting or unfavorable conditions of soil water.

Frequent causes of failure are planting too early, too deep or too late. The thorough preparation of the soil is of the greatest importance. By all means the ground must be thoroughly pulverized, granulated and smooth. The rows should be straight if the ground is wet, beds may be raised by cutting paths a few inches deep around them for drainage, but otherwise the garden should be left flat.

Most seed should not be planted too early. Plenty of time should be allowed for the weather to settle and for the danger of cold nights to pass, as these will frequently give them setbacks from which they will never recover.

Neither should they be planted too deep. An old rule is to plant to a depth of five times the diameter of the seed. The earth should be packed firmly over the seed especially when the soil is light.
