

NEW SCIENCE HALL AT "U" TO BE READY IN SPRING

University of Oregon, Eugene Mar. 12—(Special)—Formal request has been made to the board of regents by the University of Oregon faculty that the new \$100,000 science building which will be ready for occupancy some time next term, be named Condon Hall in honor of Prof. Thomas Condon, who taught at Oregon from 1876 until his death in 1907. He was one of the best known geologists of the West.

When a little group of students enrolled in the first session of the University in 1876, Prof. Condon was one of the three teachers who composed the faculty. He took over the classes in natural history and geology. For more than thirty years he was professor of geology and he became one of the traditional figures on the campus.

Professor Condon first came to the Oregon country in 1852, sailing around Cape Horn in a clipper ship from New York to San Francisco, accompanied by his young bride. He came to Oregon as a Congregational missionary and as one of the founders of the Congregational church of Eugene. The new First Congregational church of Eugene named a chapel in honor of Prof. and Mrs. Condon when the church was dedicated this week.

Professor Condon was the donor of a highly valuable collection of geological specimens of the Oregon country to the University. This collection was the result of years of geological research in the state and is one of the most complete exhibitions of its kind.

NEW GOLD CURE FOR TUBERCULOSIS FOUND

It is not remarkable that gold has been considered since remote antiquity to have curative qualities. Its rarity, its luster and above all its incorruptibility or in modern terms, its resistance to oxidation, make it the perfect metal. Many famous physicians have used gold in the attempt to cure disease.

The theoretical cure of a germ disease is simple. To effect it all we have to do is to find a substance that will kill the germ without killing the patient. Unfortunately, most disease germs cannot be destroyed in the patient's body without endangering the life of the patient. Up to the present time these efforts have reached their culmination in the brilliant results secured by Ehrlich and his co-workers in the use of arsenical compounds in syphilis and sleeping sickness. Compounds of antimony, bismuth and silver have also been found to be effective. A very large number of attempts have been made to poison the tubercle bacillus within the human and animal body.

In 1894 the gold cure had a run of popularity. The results were decidedly conflicting in regard to the value of gold as a curative agent, but it was definitely shown that gold compounds have a strongly inhibiting effect upon the growth of the bacillus of tuberculosis in the test tube. The most recent experiments on gold in tuberculosis are those coming from the laboratory of Prof. Holger Moellgaard in Copenhagen. He injects a gold compound which he calls "Sanocrysin," a double salt of gold and sodium thiosulphate. The salt is entirely harmless; provided the tissues are healthy, a violent reaction, if they are tubercular. This severe reaction is a result of liberating large quantities of poison derived from the bacteria following their destruction by the gold salt. To counteract this injurious effect a horse serum is injected which has been prepared by injecting the blood of the horse with small quantities of dead tubercle bacilli over a long period of time. This specially prepared horse serum is believed to neutralize the poison coming from the gold-killed bacteria. The claims for "Sanocrysin" as a cure for tuberculosis have not been proven. This cure is still in the experimental stage and much work must be done before it can be given to the world as a reliable treatment for tuberculosis. Tuberculosis patients are advised not to place false hopes in the many highly exaggerated statements regarding the gold cures that have been made by various people.

Takes the "Mar" out of March weather

The elements during March are not conducive to a good complexion of healthy skin.

There are many things in the way of Toilet Articles and Preparations which should be employed as safeguards during this period of changeable weather conditions.

SOAPS, LOTIONS, COLD CREAMS, POWDERS, MASSAGE CREAMS, COMPLEXION BRUSHES, ETC.

Let us supply you needs and March winds will lose their Special for Saturday March 14

A Jar of our Almond Cream FREE

With every one dollar purchase of toilet goods.

Poem by Uncle John

While the sugar-coat is helpful to disguise our bitter pills, aside from that, it's worthless as a balm for human ills. It may add to the appearance from the artist's point of view,—but it's absolutely silent, as to what the pill may do. When the devil takes a notion to annex a feller's goat, he covers up his nostrum with a fancy sugar coat. And, I've seen a whole community suffused with bloody sweat, from a sugar-coated, hell-promoted, beastly-bonded debt! Sometimes a thevin' demagogue will land an office-plumb, in a deestrick where intelligence is sadly on the bum,—where the skin of sugar-coatin' does away with taste an' smell,—while the henchmen line the idiots in the anthem "All is Well!" To hand a man yer credit—with a promissory note, is to swaller gall an' wormwood underneath a sugar coat. The man that parts with nothin' that he knows is extr'y good, comes mighty nigh to livin' like the Gospel says he should!

crystin," a double salt of gold and sodium thiosulphate. The salt is entirely harmless; provided the tissues are healthy, a violent reaction, if they are tubercular. This severe reaction is a result of liberating large quantities of poison derived from the bacteria following their destruction by the gold salt. To counteract this injurious effect a horse serum is injected which has been prepared by injecting the blood of the horse with small quantities of dead tubercle bacilli over a long period of time. This specially prepared horse serum is believed to neutralize the poison coming from the gold-killed bacteria. The claims for "Sanocrysin" as a cure for tuberculosis have not been proven. This cure is still in the experimental stage and much work must be done before it can be given to the world as a reliable treatment for tuberculosis. Tuberculosis patients are advised not to place false hopes in the many highly exaggerated statements regarding the gold cures that have been made by various people.

In view of the serious danger involved in the use of gold compounds and in view of the extended study now being made, patients afflicted with tuberculosis are cautioned not to

be unduly optimistic in regard to the treatment. No patient should discontinue the well-known methods for the cure of tuberculosis by proper regulation of their lives with special emphasis upon REST, FOOD, and FRESH AIR under competent medical direction. State Board of Health.

OREGON AND STANFORD TO DEBATE THRU AIR

Intercollegiate Radio Debate Will Be Held March 25 on Japanese Question

University of Oregon, Eugene, Mar. 12—(Special)—Oregon and Stanford debating teams will go "on the air" in the second intercollegiate radio debate in the West, March 25, the Oregon men arguing the question of the Japanese immigration law from station KGW, Portland, and the Palo Alto duo from Station KLX, Oakland, California. The teams, although approximately 800 miles distant from each other, will follow the ordinary form and convention of the usual debate.

Oregon has the affirmative of the question, "Resolved, That the Present Immigration Law Should Be Amended to Permit the Entrance of the Japanese on the Quota Basis."

The Oregon-California radio debate last year attracted wide attention. The Bok peace plan was the issue then. The teams spoke from the same stations which will broadcast the debate this month. Radio fans gave the decision by mail vote, and Oregon won by an overwhelming majority. Decision in the Oregon Stanford debate will be by mail, the radio listeners north of the California line sending their ballots to station KGW and south of the boundary to station KLX.

According to plans, the first Oregon speaker will deliver the affirmative speech. The Portland station will then remain silent while the negative speaker for Oakland station broadcasts. Then will follow the two remaining speakers and a rebuttal.

PLANT GRAFTED FRANQUETTE WALNUTS

They will make you money One of the best blocks of Vrooman Franquette in State, select type, well grown. All other stocks, filberts, apple, pear, cherry, prune, plum, peach, apricots, etc. Small fruits etc Right stock at right prices. Submit your want list, send for prices—35 years in business.

CARLTON NURSERY CO. Carlton, Oregon

601,317 Miles —and Not One Cent for Repairs

The real value of the 1925 Star is proven by the service it gives its owners in every day use.

Here's a case in point: Twenty-four Star owners report that they drove an aggregate of 601,317 miles without one cent cost for repairs.

Sounds unusual—yet, based on the reports of 40,000 Star owners on the Pacific Coast, the average cost of replacement parts averages 63c per car. That's what Star gives you in low upkeep cost.

And it does prove the truth of our statement that no car in the low cost field equals the 1925 Star for day in and day out mechanical performance.

And with all that, you drive the best looking light car designed.

Your dealer has the late models, all with the Million Dollar Motor, with its quick and abundant power—quick acceleration (5 to 25 miles per hour in 4 1/2 seconds)—20% power increase. See the 1925 Star!

High-Grade Mechanical Features on all 1925 Star Cars

- Full Force Feed Lubrication
- 4-Wheel Brakes
- Tubular Backbone
- Disc Clutch
- Hollow Cam Shaft
