## Widening the Telephone Horizon

IN the memory of many now living, Alexander Graham Bell predicted that the day would come when we could talk to other countries, even across wide expanses of water.

Bell's vision was made a reality when in 1926 New York and London spoke together in two way conversation. Since then, this service has been opened to the public between any point in the U.S.A. and Great Britain. Mexico has been brought into speaking distance. Important cities of continental Europe have come within our voice horizon.

Even more important, the Bell System in the United States now embraces 18,500,000 telephones—a growth for the past year of more than 750,000.

This is measurable progress in widening America's telephone horizon.
