TO VOTE ON COUNTY UNIT

The county unit plan of school administration is to be voted on at the May 18th primary. It is too bad that it comes at a time when there are so many other issues at stake and will not receive a close study by the electorate. The county unit plan affords the basis for more economical operation of our schools, equal taxation throughout the county for school purposes and real improvement from an

educational standpoint, Under the county unit plan all one and two room school houses would probably be closed, except those in out of the way places, and the children transported to the larger centers. Here better plants and specialized teachers would

Counties where the county unit plan is now in effect are reported well pleased with its operation. The district system is obsolete from a fair revenue raising standpoint. A district with 10 children often has the same or a greater valuation than one with 500, necessarily there is no equal tax base for school purposes.

All districts outside of Eugene would come under the county unit plan and all school properties would be turned over to the larger unit if the election carries. A board of directors and the county school superintendent, employed by the board, would administer all the schools. Teachers salaries and qualifications would be uniform and all parts of the county would have good schools.

MORE FARMERS THAN EVER

There are more people living on farms in the United States now than at any previous time in our history, according to the latest figures from the Census office . January 1, 1934, farm population in America had reached an all-time high of 32,509,000; and this in spite of the fact that during the year 1933 more people moved from the farms to the city than back from city to farm. The difference is accounted for by the fact that nearly half a million more babies were born on the farms than there were deaths among farm people last year.

This increase in our farm population does not tally with the gloomy picture so often painted of the concentration of population in cities exclusively, leaving only enough people on the land to grow food for the cities, with the aid of improved farm machinery. That picture was based upon the notion that people prefer city life to country life. No doubt many do, but we still cling to the notion that the reason so many folks remain on the farms is because they find farm life more satisfying and secure than the life of the average person in the city.

We hear a great deal about distressed farmers, and we know a good many who have hard sledding. But we haven't yet heard of anyone starving to death on a farm. The idea that, even if it is not always a good business speculation, there is always food and shelter on the farm, is turning more and more city folk to this mode of living. We look for a real "back to the farm" movement.

EMPLOYMENT IMPROVES

A pickup in employment that would indicate business is actually getting better is reported by the department of labor.

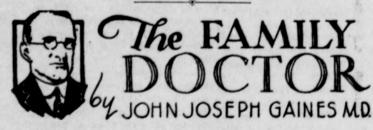

Weekly industrial pay rolls increased \$12,000,000 from January 15 to February 15 and 345,000 persons were reemployed in industries, as announced by Secretary of Labor Perkins. Miss Perkins said figures of the Bueau of Labor Statistics showed a 6.1 percent gain in factory employment during the same 30-day period and a 12-6 percent increase in pay rolls. eporting companies had increased workers 2,-400,000 between February 15, 1933, and February 15, 1934, and pay rolls of the same concerns were \$67,000,000 greater on February 15 than for the corresponding period last year,

PORTLAND REMINDED

One pertinent fact stands out in the Oregon Milk Board's answer to the City of Portland on rates-if farmers are to buy they must also sell. The board pointed out:

"The dairymen surely could not, and cannot, continue to buy, at these greatly increased prices, the things that support the people of the cities and towns of the state unless they can get some increase in price for what they must sell. It is an important fact, that should not be obscured by a narrow, selfish city policy, or by short-sighted political expediency, that, so long as the farmers cannot buy the products and services which the people of cities have to sell, just so long will the streets of cities be filled with unemployed."

The liquor commission has turned \$44,971.33 profit to the state unemployment relief council. Thus the last provision of the Knox law has begun to function. With an understanding that the profit from the state liquor stores, agencies and license funds will be used for relief purposes there will likely be less demand for a reduction in the price

TOO FAT?

If you are too fat-and some are-don't forget the two outstanding causes of excess weight; they are:

(1) Not enough exercise-

(2) Eating more than you need. These are first to be thought of. To correct either, or both, is a matter wholly your own. Nobody can take exercise for you, or cut down eating for you-you must do that for yourself. Do it under the counsel and advice of your best friend-your family doctor.

I talked this very morning with a stout, healthy country miss, who has literally made an invalid of herself, trying to take off weight; she is afraid to take quantity or kind of food that she really needs. She is unable to work, and her nervous system is torn to pieces.

It is quite possible for a state of confirmed invalidism to be acquired from constant dread of taking the necessary nourishment for the proper functioning of the body. would rather be a trifle overweight-and happy-than to starve myself into a confirmed neurotic.

The normal human being must have a variety of food. We are not herbivorous, no more than we are canivorous; we are altogether different from the lower animals; and, it takes fuel if we would build a fire. We need, in proper quantity, meats, starches, vegetables, fruits and "greens"; some things raw, some well cooked, all clean. But not an

I have a fat lady under my care—weighs 190. I try to diet her correctly. I happened into her hotel at dinner time the other day; she had a platterful and a dozen sidedishes! Enough for two or three meals! No, I didn't chide her then, but I'm laying for her. When I catch her away from the table. Well, she employs me.

Washington, April 12-The new 'strong man" in the Administration is W. Averell Harrimann. He is practically running the NRA now, and is slated to be its head when General Hugh Johnson retires or is moved out of his present post.

People always speak of Averell the people who still feel that way. Harriman as "young" Harriman. He is 43, which is about the average age of the men who run things in Washington. He is the son, however, of the late E. H. Harriman, and old-timers who remember his father, the great railroad builder and financier, still think of the present head of the family as a boy. But before he was thirty he had proved himself a man of great administrative ability in his own right. The great shipbuilding plant which he constructed during the war was his first single-handed entry into the world of affairs. man in many directions.

Already, under "young" Harri man's direction, the administration of NRA is shaping itself more to the likings of those who come under its jurisdiction.

Davis and Agriculture Much the same sort of thing can

be said for the new management of the AAA under C. C. Davis, suc cessor to George Peek as the man ager of the Government's relations with agriculture. Some of the agricultural groups, at least, seem better satisfied, though there still is the probability of some sharp clashes between the AAA and the

There is an acute realization here, even among the President's strongest supporters, that the Administration's program is not quite as popular with everybody as the earlier absence of criticism led many to believe.

The first real show of opposition to the Roosevelt policies is beginning to make itself felt. The result of this, serious in some quarters, will be a letting-up in the prescal social reforms into immediate effect. It is also having an effect will be reflected in congressional ment.

Congress is far more conserve tive, left to itself, than the Presi- this relief program. dent is. So long as Congressmen got reports from their districts in dicating that the people were unanimously behind the President, YEAR'S AVERAGE BETTER they felt that they were only doing their duty to their constituents in Seattle, Wash., April 12-A total accepting everything that came of 579 down and operating mills in club, is to be toastmaster. In short, Congress is in a temper

now to re ume its prerogatives as a co-ordinate branch of the govern ent. It mustered strength enough re-enact the Federal offices and eterans compensation bill over the President's veto, and the skies didn't fall. It may take the bit in its teeth and bolt, but that is hard ly likely if, as is anticipated, the pressure from the White Hou e is relaxed and the general feeling of the folks back home is still one o admiration for the President, And nothing as yet indicates that there is not a pretty large majority of

Federal Relief Continues The ending of the CWA does no mean the end of the Federal relies for those in distres. But the new policies to be pursued under the \$550,000,000 available for aid to those in need will not be disbursed haphazard, but the effort is to be made, according to Harry L. Hop kins, administrator of the Federal Emergency Relief Administration. to spend this money where it will put the recipients on the way to elf-maintenance.

For this purpose, the needy of the nation have been classified into Since then he has proved himself three groups, rural, "stranded" and a sound and far-seeing business urban. Rural relief is expected to take the landless, homeless, cash less farmer and set him in busiadequate equipment for maintenance and intelligent supervision gain at least a livelihood from the

> The so-called "stranded" people are those who have been left high and dry by the shifting of industries away from the centers where they formerly worked, and the substitution of machinery for manpower. The program for their relief is to set them up, as far as possible on subsistence homesteads, near some growing industrial center where there many be expected to be jobs at some time in the future. Meantime, they, also, will be put in the way of being self-supporting when there are no jobs.

> Real Work Now In the cities the relief program is expected to be under state direction, in most instances. It will be carried on somewhat on the work to be done and paid for in a twenty-four hour week for each necessary public work or in coopthe wide-spreading slum clearance

ALFALFA, NITROGEN AND ROOT FACTORY FOR SOIL

Results of Experiments Reveal Value of Crop as Fertilizer For Farm Areas

Steady growth of alfalfa acreage in Oregon is convincing proof of James H. Gilbert, dean of the colthe high esteem in which the crop lege of social science at the Uni-Now Dr. R. E. Stephenson, associate soil scientist, has compiled some interesting figures from various experiment station studies howing some of the reasons why alfalfa is so beneficial to the soil aside from its crop yielding ability.

When an old alfalfa field is plowed under there are left in the soil versity. It will be heard from 8:15 three tons of roots, dry weight, per acre above plow depth. Below that of municipal government will be there are 51/2 tons more left to decay. Thirty tons of stable manure evening. would be required to add an equivalent amount of nitrogen or or ganic matter. This study was made CREWS GET OUT NEW

A New York investigator found that in eight years an acre of alfalfa gathered 200 pounds of nitrogen from the air and changed it for the fish racks at Hendricks into a form that crops could use. To get an equal amount from commercial fertilizers would require late high water and they were readding 16000 pounds of nitrate of paired temporarily at that time soda or 1200 ponds of sulphate of ammonia annually.

Alfalfa growing is one of the few ness again on a piece of land with ways of increasing the effective soil depth, which is limited by the depth in which humus is deposited and instruction to enable him to by decaying roots. Stable manure can be mixed with the soil only to the depth of cultivation. Plowed alfalfa sod makes an ideal seed bed for corn, potatoes, or any crop which can use an abundance of fertility, points out Dr. Stephenson. It has also become the favorite cover crop for orchards in ir rigated districts.

ALL O. S. C. DADS INVITED TO CAMPUS ON APRIL 14

The first Dad's day on the Oregon State college campus has been arranged for Saturday, April 14, when members of the Dad's club organized last June will go to the campus from many parts of the state for a program of sports, business, inspection and just straight lines of the CWA, except that the visiting with sons, daughters, faculty, and each other.
