Per month, in advance, .15
Per annum if not paid in advance, 1.00
Advertising rates at fair, living rates to be
paid monthly.
Transient advertisements may be sold for
when the order is given for their insertion.

WHEN PAPA WAS A LITTLE BOY.

"When papa was a little boy
You really couldn't find
In all the State of Washington
A child so quick to mind.
His mother never called him once,
And he was always there;
He never made the baby cry,
Or pulled his sister's hair.
"He never slid down banisters,
Or made the slightest noise,
And never in his life was known
To fight with other boys.
He always studied hard at school,
And got his lessons right;
And chopping wood and milking cows
Were papa's chief delight.
"He always rose at six o'clock
And went to bed at eight;
And never lay abed till noon
And never sat up late.
He finished Latin, French and Greek
When he was ten years old,
And knew the Spanish alphabet
As soon as he was told.
"He never grumbled when he had
To do the evening chores,
And never in all his life forgot
To shut the stable doors.
He never, never thought of play
Until his work was done,
He labored hard from break of day
Until the set of sun.
"He never soiled his muddy shoes
Upon the parlor floor,
And never answered back his ma,
And never tangled the door.
But truly, I could never see,"
Said little Dick Malloy,
"How he could never do these things
And really be a boy."
GEORGIA HILLINGS, in Youth's Companion.

It has been decided to call the new paper THE SASTIAN NEWS. Subscriptions will be the next thing in order, price \$1.50 in advance, if we can get it. We will take anything the farmers raise, that we can use or dispose of, on subscription.

The Capital Journal says there are not many faster race tracks in the world than the race track at Scio. That sounds nice, but as a matter of fact the track was not fast at all, and a number of prominent horsemen at the State Fair grounds hated to see Chehalis go against time on such a track. Chehalis is a magnificent horse, but the Salem track added nothing to his speed.

From Nebraska comes the news of the discovery of a new kind of wheat. It differs from the old varieties by growing seven heads to the place of one. It seems that it will grow on any land on which ordinary wheat will grow, and that each of the seven heads is the size of the ordinary head and contains well developed grains. It naturally follows that if this wheat meets future expectations, it means considerable to the growers of the country. It seems this new kind of wheat was discovered in California about three years ago, and it has only been grown on a small scale since, as the farmers had but little faith in it, and were disposed to regard the stories about its wonderful yield as fish yarns. In New Mexico the farmers have taken up the new kind of wheat, and so far it has met their expectations. If this variety of wheat turns out all that is expected of it, there is no doubt that it will soon take the place of all other kinds of winter wheat.—Ex.

CEMENT FOR MENDING.

A cement excellent for mending almost anything is made by mixing litharge and glycerine to the consistency of thick cream or putty. It is useful in mending crockery, earthenware, stopping leaks in seams of tin cans or wash boilers, cracks or holes in iron kettles; it may be used to fasten on lamp tops or tighten loose nuts, to secure bolts whose nuts are lost, to tighten loose joints of wood or iron, or in many other ways about the various kitchen utensils, the range, sink and in the pantry fittings. In all cases the article mended should not be used until the cement is set, which will probably be from three to six days, according to the quantity used. This cement resists the action of hot or cold water, acids, and almost any degree of heat.

OF INTEREST TO FARMERS.

To over feed hens is a sure way to keep them from laying.
Lia-ved-meat is not a summer food, but it can be allowed with excellent results if given about three times a week, in the proportion of about one pound of linseed meal with four pounds of corn-meal, for fifty hens. It is one of the best remedies for bowel disease that can be used, and it is also excellent in the feed of molting hens. It is an agreeable change, and frequently supplies the hens with needed substances that are lacking in other food.

The process of dehorning cows is quite general in the United States at the present time. Some object to it on account of the severity of the operation. That it hurts the animal any one can see, but there is no injurious effects. When we see how subduer the cows become who before wanted to fight, we begin to think it is a good thing. And any one who has had a promising red cow, or has even been hooked himself, will think dehorning all right. Then it is also claimed that the flow of milk is increased, and the animal easier kept.

The management of fowls in summer, when the weather is excessively warm, demands more care than is usually given. Lice will breed and multiply so rapidly as to completely ruin the flock almost before the owner is aware of the fact. First, the poultry house should be cleaned, and the fowls made to roost therein, and not outside. Then the interior and exterior should be thoroughly drenched with kerosene emulsion, adding a gill of crude carbolic acid to every quart of the emulsion before adding the water. To make the work sure, the house should be thoroughly drenched every day for a week, and once a week thereafter.

T. B. Terry, in the "Practical Farmer," gives the method adopted by an expert in judging dairy cows in selecting calves that he thinks good enough to raise, as follows: When a calf is dropped we first turn it on its back and examine its teats. If there are four, well placed, and two rudimentary or extra ones, all right. Next we look into the calf's mouth. If there are six or eight milk teeth through, we call the calf well born and worth raising. If it has but two teeth through, it is not worth raising. We will not fuss with it. It shows that the mother had not vitality enough to properly start the calf. We want to breed from the best. We do not raise calves born with two or four teeth just sticking through. They will be weakly, puny, subject to disease all their lives. The well-born calf is half raised. Its mother has given it a start from her own strong vitality.

John Gaines has bought a thorough-bred durham bull and heifer, for which he paid \$200.
No doubt many farmers will think John made a poor investment, but to buy a thorough-bred bull is the best investment a cattle man can make. Suppose Mr. Gaines raises 50 calves the first year. The calves at yearlings are easy worth \$2 more than the common herd, and at maturity they will be worth \$5 more than common stock. Will it pay him?
Last spring when the cattle boom was running high in Eastern Oregon, the Butcher Bros. had a bunch of graded Hereford cattle which they refused to sell for \$5 more per head than common bunch grass cattle was going at. Later on the cattle was going at, later on the price was \$70.37 during the eighteen months. This was the last straw with Ross. He sent nine of his cows to the butcher and gave up dairying except for home use. He says there is no profit in dairying, and he knows it by actual experience. Being asked how it was that Johnson made so much from one cow he replied: "Oh that was bull-headed luck."—Hoard's Dairyman.

THE PROPER DIET FOR SCHOOL CHILDREN.

"A schoolgirl of ten years," writes Mrs. S. T. Rorer in the October Ladies' Home Journal, "should have good, easily-digested, nutritious food: Well-cooked, steel-cut oats for breakfast; soft-acid fruits and soft-boiled eggs. If she carries her lunch-a cup custard, fruit and chopped meat sandwiches made from either beef, mutton or chicken will answer. No pork nor veal, no sweets nor fried foods should be given children. Apples, either baked or raw, between meals are good. For the evening meal give a nutritious cream soup, then a red meat, either beef or mutton, roasted, boiled or broiled; a lettuce salad, containing a light French dressing made with oil and a few drops of lemon juice; some simple dessert, such as rice pudding, cup custard, tapioca or baked apples."

BEATING A GOOD COW.

Johnson and Ross were two general farmers that lived side by side. Each of them kept a cow and each endeavored, beside supplying the family with milk, to make some butter for sale. Johnson was one of the farmers that his neighbors declared had been spoiled by reading books on agriculture and agricultural papers. He had got, as Ross expressed it, "high-ker-futtin' ideas" on farming in general, and the cow in particular. One proof of this was in the action of Johnson when he sold off all the cows he had and took the price and put it in a single cow of great milk and butter producing capacity. Ross said that this was a piece of foolishness that could have come only from Johnson's continual reading of agricultural papers. Anyway, every farmer knew that a cow was a cow, and that was all there was to it, and the man that would go into fancy stock of that kind, was simply wasting his money. Why, if he had only put his money into a high-bred hunting dog, there might have been some reason to it.

However, Johnson continued to milk his cow and Ross did the same. Both sent their butter to the same market and got about the same price per pound, as the butter Johnson made was from only one cow, and therefore could not well be sent to a distant market or to fancy customers. Johnson's wife kept account of the receipts and expenditures in a systematic manner and Mrs. Ross, wishing to show that a common cow would do as much as a high-bred one, also kept account on her side, though Mr. Ross said that that, too, was a piece of foolishness. At the end of three months Mrs. Ross credited to her husband that the cost of keeping their cow had just equalled the receipts, while the Johnson cow had \$17 or thereabouts standing to her credit. Ross went into the country and paid \$15 for another cow, and Mrs. Ross' hopes were accordingly raised. But the two cows cost about double the cost of one, and in two months more he found from his wife's accounts that the two cows had made a profit of only \$1.85, while the credit to the Johnson cow was \$29. Ross this time bought a \$20 cow, but at the end of another month the profit for the three was \$2.65, while the Johnson cow had raised the limit to \$33. Ross determined to beat that cow if he had to buy a whole herd, so about once a month he would bring home a new cow, generally bought cheap at auction.

At the end of eighteen months Ross had a herd of ten cows, all working as faithfully as they could to beat the Johnson cow. The product was greatly increased in volume, even though one or two of the animals had run dry. But the expense of keeping them was considerable, and it seemed to Ross that all the money he took from the grocer he paid out again to the feedman for feed, but this was not quite so. Moreover it had become a great burden with the Ross family to milk ten cows twice a day and otherwise care for them. Mrs. Ross suggested that they had better hire a man to help, but Ross winced at the proposition and said that the profits would not warrant it. At the end of the time specified the Rosses took an account of stock, and found that the last two cows had proved a losing investment, and that now the balance was just a trifle on the wrong side of the books. It had actually cost more to keep the ten cows than they had brought in, after figuring the money value of the feed that had been raised on the farm. They learned that the Johnson cow had increased her net value to \$79.37 during the eighteen months. This was the last straw with Ross. He sent nine of his cows to the butcher and gave up dairying except for home use. He says there is no profit in dairying, and he knows it by actual experience. Being asked how it was that Johnson made so much from one cow he replied: "Oh that was bull-headed luck."—Hoard's Dairyman.

Those who believe chronic diarrhoea to be incurable should read what Mr. P. E. Grisham, of Gaars Mills, Ia., has to say on the subject, viz: "I have been a sufferer from chronic diarrhoea ever since the war and have tried all kinds of medicines for it. At last I found a remedy that effected a cure, and that was Chamberlain's Colic, Cholera and Diarrhoea Remedy." This medicine can always be depended upon for colic, cholera morbus, dysentery and diarrhoea. It is pleasant to take and never fails to effect a cure. 25 and 50 cent sizes for sale by PERRY & PERRY.

Group Quickly Cured.
MOUNTAIN GLEN, ARK.—Our children were suffering with croup when we received a bottle of Chamberlain's Cough Remedy. It afforded almost instant relief.—F. A. THURNTON. This celebrated remedy is for sale by PERRY & PERRY.

THE SILO.

Every farmer should have a silo. In fact, no up-to-date owner of stock thinks of trying to do without one. The convenience and profit of the silo are clearly set forth in a bulletin by the New Jersey experiment station as follows:
"1. The silo stores away corn more safely and more permanently than any other plan. Silage is practically fireproof, and will keep in the silo indefinitely.
"2. Corn can be made into silage at less expense than it can be preserved in any other form.
"3. The silo preserves absolutely all but the roots of the corn.
"4. Silage can be made in surplus in or in rain. Unlike hay, it is independent of the weather.
"5. When corn is ready for the silo there is but little farm work pressing.
"6. Corn is worth more to the dairy as silage than in any other form.
"7. At least one-third more corn per acre may be fed on silage than on dried corn stalks or fodder.
"8. Corn is fed more conveniently as silage than in any other form.
"9. Silage is of most value when fed in combination with other food rich in protein. It is not a complete food.
"10. Owing to its succulence and bulkiness, silage is the best known substitute for green grass, and is, therefore, especially valuable as a winter food."

Market Report.
Wheat, 72 1/2 cts. per bu.
Oats, 27 1/2 " " " " " "
Flour 14 1/2 " " " " " "
Rye 12 1/2 " " " " " "
Middlings 10 " " " " " "
Chop, \$16 per ton.
Potatoes, 10 cts. per sack.
Eggs, 15c. per doz.
Butter, creamery 25c. ranch 12 1/2 cts.
Hams, 12c. per lb.
Shoulders, 8c. per lb.
Bacon, 10c. per lb.
Lard, 10c. per lb.
Chickens, 3.00 per doz.

50 YEARS' EXPERIENCE.
PATENTS
TRADE MARKS, DESIGNS, COPYRIGHTS, ETC.
Scientific American, Publishers, 301 Broadway, New York.

MARRIED OR SINGLE.

One of the ways of telling whether a man is a married man or not is to examine his pockets. In the pockets of a bachelor you will find:
Half a dozen letters from girls.
A tailor's bill.
Three or four old checks for theater seats.
Theatrical looking photographs.
A lot of invitations to dances, dinners and receptions.
A tiny glove scented with violet.
But the married man's pocket will contain:
An old bill.
A couple of unposted letters which were given him to post a week past.
A sample of impossible shade which he must match.
A newspaper clipping telling of a sure cure for croup.
A shopping list ranging from a box of backing to three yards of lace.
Bills.
More bills.—London Tit-Bits.

Do not longer be deceived by self-worship and the truth, it will pay you dividends.
THINK OR STARVE
THAT IS THE ALTERNATIVE.
Formerly NEW OCCASIONS.
The Best Reform Magazine. One Dollar a Year.
Monthly—Eighty Pages.
Charles H. Kerr & Company, Publishers, 36 Fifth Avenue, CHICAGO.

"My boy came home from school one day with his hand badly lacerated and bleeding, and suffering great pain," says Mr. E. J. Schall, with Meyer Bros' Drug Co., St. Louis, Mo. "I dressed the wound, and applied Chamberlain's Pain Balm freely. All pain ceased, and in a remarkably short time it healed without leaving a scar. For wounds, sprains, swellings and rheumatism I know of no medicine or prescription equal to it. I can offer it a household necessity." The 25 and 50 cent sizes for sale by PERRY & PERRY.

WANTED—SEVERAL FAITHFUL MEN OR WOMEN to travel the proposition established in Oregon. Salary \$750, payable \$15 weekly and expenses. Particulars furnished. Enclose a photograph and references. The National Business Building, Chicago.

Notice for publication.
LAND OFFICE at OREGON CITY, OREGON, August 28, 1897.
NOTICE IS HEREBY GIVEN that the following unpatented settler has filed notice of his intention to make final proof of his claim, and that said proof will be made before the county clerk of Linn county, at Albany, Ore., on Oct. 1, 1897, viz:
J. E. HARRIS, for the E. 1/4 of sec. 23, E. 1/4, N. 1/4, Sec. 24 and W. 1/4, N. 1/4, Sec. 25, T. 12, R. 1, E. 1. Also claimed the following wilderness to provide for pasture and stock raising and cultivation of said land, viz: Section 1, T. 12, R. 1, E. 1 of District Oregon.
J. H. HARRIS, Register.
First publication Aug. 27.

A. G. PRILL,
Physician and Surgeon.
Scio, Oregon.
Residence opposite the planing mills.
Office next door to drug store; hours 9 to 12 A. M. and 2 to 5 P. M.

CUT RATES
I have a stock of bookstore goods in close out at once to RETAIL DEALERS or buyers for school libraries, etc. I think I can make prices that will interest you. The goods are of the very finest quality, but must be closed out at once.
W. R. BLAIN.
(He puts the prices down.)
