There is urgent need of a good fire company in Scio, and if our citizens would take hold of the matter financially it would be forthcoming of a sufficiency to defray the expense of organization, there being quite a sum of money in the hands of the treasurers of the defunct companies, this money could be turned over to the new organization, and would help keep the company going. We need a company for the protection of our citizens, and every effort should be put forth to organize one and get it in good working order before spring opens up and the dry weather approaches. This is not the first time that the matter has been spoken of in these columns, and we hope that an active interest will be taken in the matter by our people.

There was some water in the river Thomas, and we may as well include all the streams in the valley, the first of the week. There was a good deal of snow in the mountains, and the warm rain Saturday and Sunday caused the streams to swell to their fullest capacity, and in many instances they overflowed and reached out into neighboring fields. The mill race was not large enough to hold the water that came into it, although the headgates were all closed, and the water flowed all over the surrounding country. Above the dam the water cut through a point, and made a new channel, but did not cut sufficiently to leave the dam dry, and it is thought the crees will remain in the old channel. A large amount of drift wood went down, and one log took out a couple of posts from under the planning mill. The breakwater just above the planning mill went out Sunday morning, likewise G. W. Phillips' hog pen, and the new hog pen at the roller mills. The water was about three feet deep in the basement of the roller mills, but the basement had been cleaned up in anticipation of a raise of water. For a time the bridge was thought to be in danger, but as no large driftwood caught on it no damage was done. The water was up so high that it was not possible to run either the mill or light plant, and the town was in darkness for a couple of nights.

The Oregon penitentiary furnishes a study in criminology in the steady decrease in crime. During the past five years, which is shown by its roster of prisoners which was 65 less on December 1, than on the 30th of November, 1895, this deduction coming down gradually every year. Following is the number of prisoners in the institution on the 30th of November of each year since that time, 1895, 349; 1897, 337; 1898, 318; 1899, 313; 1900, 290. At no time in the past two years has the number of convicts been less than it is at present.

The Southern Pacific is abreast of the times with electric headlights for its engines. By merely touching a button the engineer sets the lights into play. Each light is of 2,000 candle power. It lights the track half a mile ahead of the engine, while the oil light throws a spot light a few hundred feet in front of the cow catcher. Anything on the track can be seen sixteen telegraph poles ahead of the engine, far enough away so that the train could be brought to a halt before it reached the object, even at its full speed. The engines are being provided with the apparatus, as fast as it can be supplied.
