

Scrofula

It is commonly inherited. Few are entirely free from it. Common indications are lumps in the neck, abscesses, cutaneous eruptions, inflamed eyelids, ear aches, rickets, catarrh, wasting, and general debility.

Hood's Sarsaparilla and Pills

Eradicate it, positively and absolutely. This statement is based on the thousands of permanent cures these medicines have wrought.

"My daughter had scrofula with eleven sores on her neck and about her ears. Hood's sarsaparilla was highly recommended and she took it and was cured. She is now in good health." Mrs. J. H. Jones, Parker City, Ind.

Hood's Sarsaparilla promises to cure and keep the promise.

An Absurdity. "Suppose," said the friend who had been reading "Enosh Arden," "that you went away out on a sea voyage and came back to find that your wife had married another man?"

"That's an absurd proposition," answered Mr. Moxton. "Henrietta would never be so careless with me as to let me go away on a sea voyage."

Hamilton's Wizard Oil knocks the spots off your throat when it is sore, and prevents diphtheria, quincy, etc.

Sure to Come Down. Tom—Yes, we had quarrelled, but I was determined to see her.

Dick—When did you manage it? Tom—When I called I told the maid to say it was a society reporter who wanted to see her—Philadelphia Press.

FITS. Permanently cured. Dr. J. C. Williams' Pink Pills for Pale People.

The Fun of It. Knox—We went to see the Cadillac last night and had a most enjoyable time.

Cox—The idea! Why they usually fall dionally at understanding people. Knox—Exactly. We enjoyed ourselves talking about them on the way home.—Philadelphia Press.

Are You Eating Allen's Foot Power? It is the only cure for swollen, smarting, burning, itching feet, corns and bunions.

Too Bad. "Do you know, Miss Frisbie," said the large headed young author, "my most brilliant thoughts come to me in my sleep."

"It's a great pity that you are troubled with insomnia," added the young lady.—Detroit Free Press.

I do not believe Ayer's Cure for Consumption has an equal for coughs and colds.—John F. Jones, Trinity Springs, Ind., Feb. 15, 1906.

Family Pride. "Mr. Cumrox is only suffering from an ordinary cold, I believe," said the sympathetic visitor.

"Well," answered Mrs. Cumrox, "we've done our best to keep it from being ordinary. We've sent for the most expensive physician in the city."—Washington Star.

The Modern Play. "Your friend, the theatrical manager, has gone abroad, I believe."

"Yes; he's gone securing the Continent for new attractions."

"Ah! The American public will get the off-scorings, as usual."—Philadelphia Press.

Muscular Soreness. As the result of over-exertion and exposure to heat and cold, or from whatever cause, may be treated successfully by the timely application of St. Jacobs Oil. A thorough rubbing is necessary. The Oil should be applied vigorously for at least twenty minutes, two or three times daily, when all pain, soreness, stiffness will be removed in twenty-four hours. It will also strengthen and harden the muscles. Football players, gymnasts and all athletes will find St. Jacobs Oil superior to any other remedy for outward application, for the reason that its action is more rapid and its effect permanent. Thousands of people all over the world use and recommend St. Jacobs Oil for muscular soreness. A twenty-five cent bottle is quite sufficient to prove its efficacy. In cases where muscular soreness is complicated with any disease which requires an alternative or other Curative Compound should be taken. This prepared by the proprietors of St. Jacobs Oil, Baltimore, Md., who will send a sample free on application.

Luck! Well—Brown—What a lucky fellow Robinson is. Jones—Lucky! I should say he was. Why, his fiancée's birthday comes on Christmas.

Half-Sick

"I first used Ayer's Sarsaparilla in the fall of 1848. Since then I have taken it every spring as a blood-purifying and nerve-strengthening medicine." S. T. Jones, Wichita, Kans.

If you feel run down, are easily tired, if your nerves are weak and your blood is thin, then begin to take the good old standard family medicine, Ayer's Sarsaparilla. It's a regular nerve lifter, a regular blood builder. \$1.00 a bottle. All druggists.

PAPERS BY THE PEOPLE

THE JEW MUST STRIKE BACK.

By Dr. Emil R. Hirsch. If the Jews will learn to strike back, they will be let alone. Let them feel our strength and power and then they will have a wholesome fear of the Jewish God and the Jewish God.

In a Hirsch among the women in the camps in South Africa, headed together like so many cattle by the British soldiers. I have no doubt that the suffering is intense and the hearts of the civilized people are justly touched by the stories of what they have to endure. But the condition of the Jews in Russia is worse than the worst of the suffering in South Africa, and yet from one end of the other of this big world not a voice to their behalf is raised or heard.

But I can fully understand it—they are Jews. What matter if they suffer? What concern is it of ours? They have no guns to back them; no armored ships to fight for them; they are only Jews. They have suffered for eighteen centuries, let their suffering go on.

This is a condition of affairs which calls to heaven for justice and not charity. I agree with you Zionists that it is not the duty of the country of the suffering to be justified in trying to establish one. What place can they call their own? They must do military service in Russia, and then the Czar says they are a source of danger to the country. They are forced to pay blood taxes. I can understand that the country of their fathers should be a "shop" for Palestine, and that it makes their hearts feel lighter. I can understand why they cherish a plan which would see the Jews of Russia, manhood and liberty for their descendants.

I agree with you that if it were possible to migrate from cruel Russia and cursed Bessarabia it would be advisable. From the pale of Russia to the sweatshops of America does not spell redemption to me, but if their coming here would relieve their wretchedness, I say call them here.

WORST SIGN OF THE TIMES.

By Dr. Timothy Dwight. I heard a prominent graduate of one of our universities say that when he was a student many years ago there was in the student community almost a contempt for wealth. The thought of the ambitions of the college men at that period were in the line of higher things than wealth, and in their estimate of one another they regarded this as nothing. The whole life of the country has greatly changed since then. We have become a wealthy nation. We have passed from the life of a quiet town, as it were, to the luxury and abundance of a great city.

The devotion of the people to money getting has become so great as even to be alarming, and the me desire which seems to unite all men together is the desire to make something in this matter of money out of nothing.

There is surely no worse sign of the times in our day than that I believe that much of the old spirit still remains—at least so far as our judgment of men goes. If the evil tendencies that are

LAYING A CABLE.

Materials Required for the Construction of the New Pacific Line. For the manufacture of the proposed Pacific cable—the largest in the world—an enormous amount of material will be required. It is estimated that there will be needed 1,080 tons of copper wire, 1,200 tons of gutta percha, 2,300 tons of jute yarn, 4,000 tons of compound and tar and 12,000 tons of steel wire.

The laying of the cable will take four special constructed ships and a staff of 1,000 electricians, cable engineers, etc. The rate of laying a cable, in the absence of unforeseen difficulties, is about seven nautical miles an hour, and in a couple of thousand fathoms of water the cable takes as long as three hours to sink to the bottom. When a cable is laid out it runs over a wheel at the stern of the ship, having to pass on its way from the tank where it has been coiled through a dynamometer, which tells the strain to which it is being subjected.

As soon as all the cable on board a cable ship has been paid out the end is sealed carefully and attached to a rope, the other end of which is attached to a buoy and dropped into the sea. The vessel then returns to port for more cable, with which she steams off again to the scene of operations, picks up the buoyed end, carefully splices it to the end of the new section which she has brought out and goes on with the laying as before.

To land a cable some interesting preparations are made. Shovels wheelbarrows are anchored on shore and around them a line is passed and carried back to the cable ship. To this line the end of the cable to be landed is attached and floated ashore, buoyed up on inflated rubber bags. The land end of a cable is considerably larger than the part which is submerged. Once on shore it is drawn up the beach to its proper inland position and secured.

The new Pacific cable will be 8,000 miles long. No other cable in the world is half as long. When the new cable is laid there will be sufficient length to girdle the earth at the equator eight times and something to spare, or enough to reach two-thirds of the way to the moon.

IMPORTED FROM THE ORIENT.

"Chit," a Frazzworthy Institution, Enforces Honesty in Servants. What is a "chit"? This is a word that has crept into the English language of recent years, and although fairly common in England, its use in this country dates from the Philippine campaign, the war with China, and the still more recent immigration of Japanese into the United States. Its use is common in Chinese and Japanese hotels and restaurants, while the origin and meaning of the word are as follows:

GREATEST NEED OF NATIONS.

By Lord Rosebery. The greatest need of the nations of the world is the trained man and woman. The nation that has the brightest minds and the most energetic men in which it is brought into competition with the rest of the world will best maintain its place in the struggle for existence.

FOOT-BINDING AMONG THE CHINESE.

By Wu Ting Fang. The Chinese are abandoning foot binding. It is a fashion that is going out like water among the Chinese. It is a fashion that is going out like water among the Chinese. It is a fashion that is going out like water among the Chinese.

WHAT IS BEST FITTED TO RECEIVE THIS TRAINING?

By Russell Sage. Every man has a right to live his own life and when he has the money to spend it as he sees fit. Having in mind the recent report of the Hon. William C. Whitney, I cannot see how a man of talent who has led an active life and been a factor in great and important undertakings can and will never all business connections and really enjoy himself as much as he had hitherto. Such a man's mind must continue active, and after his experience should think it would be difficult for him not to wish to keep in touch with the changes of the world, with its possibilities and in success in business life a very large pleasure.

LIFE OF LASE NOT A HAPPY ONE.

Every man has a right to live his own life and when he has the money to spend it as he sees fit. Having in mind the recent report of the Hon. William C. Whitney, I cannot see how a man of talent who has led an active life and been a factor in great and important undertakings can and will never all business connections and really enjoy himself as much as he had hitherto. Such a man's mind must continue active, and after his experience should think it would be difficult for him not to wish to keep in touch with the changes of the world, with its possibilities and in success in business life a very large pleasure.

TO BE AN ENGLISHMAN AND FORCED TO SUFFER.

No doubt many of those who were impressed were British subjects, but many others were American citizens, and the compulsion to serve on British ships was a wrong. The diary of Captain Hoffman of the Royal Navy, which has been published under the title of "A Sailor's Story," contains a story of a man-of-war which must have been amusing to a British point of view.

She Had Improved.

The Princess Charlotte, daughter of George IV., was a young woman of great spirit and originality. One day one of her teachers chanced to enter the room when the princess was reviling one of her attendant ladies in great wrath, and after giving her a lecture on lady's speech, he presented her with a book on the subject.

Both Come in Bottles.

The father was testing his little boy's knowledge of the story of Noah, which he had carefully rehearsed. The boy had been thinking hard, says the New York Times, and his answer to the first question showed that he had at least the virtue of originality.

SOLES AND ULCERS.

Sores and Ulcers never become chronic unless the blood is in poor condition—sluggish, weak and unable to throw off the poisons that accumulate in it. The system must be relieved of the unhealthy matter through the soles, and great danger to life would follow should it be allowed to remain in the system. S. S. S. begins the cure by first cleansing and invigorating the blood, building up the general health and removing from the system A CONSTANT DRAIN UPON THE SYSTEM. When this has been accomplished the discharge gradually ceases, and the sore or ulcer heals. It is the tendency of these old sores to grow worse and worse, and eventually to destroy the bones. Local applications, while soothing and to some extent alleviating pain, cannot reach the seat of the trouble. S. S. S. does, and no matter how apparently hopeless your condition, even though your constitution has broken down, it will bring relief when nothing else can. It supplies the rich, pure blood necessary to heal the sore and nourish the debilitated, diseased body.

TO FIND YOUR WAY.

Woodcraft, as a Texas Told It to a Tenderfoot. "When you discover that you are lost, first stop and pull yourself together. Recall the direction in which you started, then examine whether you went north, south, east or west. You can always do this, if you try. The next step is to fix the points of the compass. When that is done, you will be able to go in the general direction you wish. Find a mature tree that stands apart from its fellows. Even if it is only slightly separated it will do. The bark of this tree will be harder, drier and lighter in color on the south side. On the north it will be darker, and often at the roots it will have a clump of moss or fern. On the south side of all evergreen trees, gum, which oozes from wounds or knot-holes, will be hard and amber-colored. On the north side of the same tree it will be soft and is of a dirty gray. In fall or winter, trees which show a rough bark will have nests of insects in the crevices on their south side. A tree which stands in the open will have its larger limbs and rougher bark on the south side. You have many evergreens in your part of the country, cone-bearing or coniferous—trees—firs, spruce, cedars, hemlocks, pines. They ought to be good compasses. Hardwood trees—the oak, the ash, elm, hickories, maples, and so forth—have moss and mold on the north. Leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side. In the South air-plants attach themselves to the north sides. Cedars bend their tips to the south. Any sawed logs will give you the compass points, because the concentric rings are thicker on the south side. The heart of the stump is thus nearer to the center. All these things are the effects of counterforce from the south. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found. On the north side of a tree, the leaves are smaller, tougher, lighter in color, and with darker veins on the south side of the leaf. They are longer, of darker green, and with lighter veins. Spiders build on the south side, and if they have moss at all, it will be on the north. At best, on the sunny side only a thin covering of lichen, half dry moss will be found.
