Man.

Man is a two legged animal that walks on the fore end and chews tobacco. He is hearty and wonderfully made—in three colors—red, white and black.

When the flag was made the black man had the blues.

Early history tells us that man is made of dust, and many there be this day who claim that the dust makes the man.

History fails to tell us what any other animal was made of except woman. Woman, it tells us, was made of flesh and bone and it certainly was just the stuff. She is the masterpiece of the Maker's art. She has long black hair and wears it hanging down her back. She is full of mischief and wears it in her eyes.

The first dash out of the box she began playing pranks on man. She fed him on green apples and got him into trouble.

Next she organized a Free-mason lodge, initiated the man, tied an apron on him and told him to wear it—that it was a badge of honor—while she fixed up a sort of regalia and played the Eeester Star. The man soon learned that she was the whole thing, the war of the East, the West, the morning star, the evening star, and the star of attraction everywhere, and that man is merely a star gazer.

Man is found in most parts of the world. He roams at will, feeds in the daytime and sleeps at night—some nights. In his infancy he is full of cold, paragon and catnip tea; and in his old age he is full of disappointments, rheumatism and patent medicines. In his youth he is swelled with vanity and cuts a good deal of frozen water, but in old age he is limp and withered. He comes into the world without his consent, traveling the rocky way between the two scorpions and goes out against his will. In nine cases out of ten, if he is poor, he is a bad manager; but if he is rich, he is dishonest. Man is very tame and gentle unless you touch his pocket book; then he will kick like a bayed steer.

Man differs from all other animals, in the fact that he lies standing up, as to what man is really good for, the world is in the dark. Being strong, he is made to draw pensions and carry news. He is very active and has been known to jump a mountain resort board bill.

Man is introduced into the world by a doctor and out of it by the same process.

Men are crooked; they are driven to it by women. No man will swear before a lady—if she will swear first. When man is little big girls will kiss him and when he is big little girls will kiss him.

If he raises a big family he is a chump. If he raises a check he is a thief and a fraud.—Florence West.

DECAY OF THE TEETH.

The discovery was recently announced that decay of teeth, like other forms of decay, is wholly dependent upon the action of microbes, says J. H. K. in Good Health. The germs are always present in the mouth, and when sweet, starchy substances are retained upon the gums or between the teeth, they set up a sort of fermentation, which produces an acid capable of dissolving the enamel. Pure cultures of these microbes have been found capable of producing an acid which rapidly softens teeth exposed to its action. This discovery explains the deleterious effect of candies and other sweets upon the teeth. The teeth of children are often destroyed by the free use of sweets before the permanent teeth have fully made their appearance. As a consequence, the second set are defective, and also decay early.

Invalid's Outlet.

A palatable addition to the menu of a convalescent is an "invalid's cutlet." For this take three cutlets from a neck of mutton, trim one very neatly and fix it between the other two, which should be large enough to lap it all around. Fasten the three together with a string of small toothpick skewers, and broil, turning constantly while they are cooking. When cooked take the middle cutlet out and serve with a little potato snow or some spinach, or whatever the doctor will permit. It will be found that this middle cutlet has absorbed all the juice of the other two and is both delicate and extremely nourishing.—N. Y. Post.

New York's Merchants' Exchange.

As early as 1870 there was a Merchants' exchange in New York. It was founded by Col. Richard Nicolls, who was governor of the province of New York at the time. The shopkeepers met at the ringing of the State Bells on Friday evenings for the purpose of exchanging and barter. At these meetings the major presided.—Cleveland Leader.

NEW USE FOR ELECTRICITY.

Albany Herald.

Electricity, long used in the laboratory for experimental purposes, is fast coming before the public as a source of great value in the service of the affairs of everyday life. By electricity power to drive machinery can be utilized at the distance of miles from his source, and by electricity—thanks to Mr. Edison's recent discoveries—our streets and houses are lighted more brilliantly than by gas. While all these results are evident to the public at large, there is still another field in which the use of electricity is rapidly working a profound reformation—the field of medical science. The following remarkable cures, performed by Dr. Darrin, shows the uses for electricity.

Catarh, Bronchitis and Consumption Cured.

MR. EDITOR: I will lend my name to the long list of cures performed by Dr. Darrin. Fifteen years ago catarh and bronchitis troubles commenced to annoy me, and seven years later a complicated lung trouble showed itself. All efforts to cure were fruitless, until coming under Dr. Darrin's electrical treatment eight years ago. I am happy to say I am cured. I attributed my long continued good health to the health influence of electricity, which restored me to a permanently sound condition. I am now agent on the Southern Pacific Railway and pass Albany daily, and will gladly answer any questions at my home in Mount Taber, Or.

J. A. LINDSLEY.

Dr. Darrin's Place of Business.

INTERSTATE MIGRATION.

Vast Numbers of People Abandon Their Native States and Settles in Others.

At least one person in every five native born Americans is living in a state other than that in which he was born—a striking instance of the mobility of the people of the United States. The native population of the United States, according to the last census, was 88,500,000, of whom more than one-fifth, or 20,000,000, were living in adopted states, states the National Geographic Magazine.

It is interesting to note the number of those who have left their native states. New York has sent out more than 1,500,000, Pennsylvania nearly 1,000,000, Ohio more than 1,000,000, Illinois over 1,000,000, and Indiana, Iowa, Kentucky, Missouri, Tennessee and Virginia over 500,000 each. Proportionately to her population Vermont has given to her sister states more than any other member of the union. Vermonters, residing in numbers nearly one-half of the present native population of the state are living in other states. Virginia, New Hampshire, New Mexico and Delaware have each sent out numbers equaling about one-third of their present native population.

Numerically Illinois has received more citizens from other states than any other state of the union—nearly a million; 825,000 have entered Missouri, 825,000 Texas and over half a million New York and Ohio. The states that show a net gain from this migration are Massachusetts, Rhode Island and Connecticut of the New England states; New Jersey, West Virginia and Florida of the Atlantic coast states; and Minnesota, Louisiana and all the states west to the Pacific coast have made gains. Texas has gained the most of all—629,000. Kansas comes next with a gain of 422,000 and California third with 364,000.

The Nerve Boarder.

"Yes," said the landlady, proudly, "my cook is a graduate of a Chicago domestic service school. She had her shoe-pink diploma, just like a doctor or a lawyer."

"Too bad she's nearsighted," remarked the nerve boarder from the other end of the table.

"Nearsighted," repeated the landlady. "I think you are mistaken."

"Perhaps," replied the nerve boarder, "but I was surmising that she had accidentally stole up her diploma in this lamb potpie."

Only the fact that he paid regularly saved the nerve boarder's life after that.—Cincinnati Commercial-Tribune.

Hill in a Football Game.

While a football game was in progress at Hanley, England, a ball invaded the field. Some of the players being dressed in a bright red the ball determined to have a little game himself, and the manner in which he kicked the center and made the ballers scatter in all directions showed that he had nothing to learn from them in the game of football.—N. Y. Sun.

A Serious Mistake.

E. C. DeWitt & Co. is the name of the firm who make the genuine Witch Hazel Salve cures blind, bleeding, itching and protruding piles, burns, bruises, eczema and all skin diseases. Sold by E. C. Peery.

MISCELLANEOUS ITEMS.

About 20 per cent. of the weight of meat is lost during cooking.

An ordinary oak tree raises 120 to 150 tons of moisture from the earth during a single season.

Except school taxes there is no state tax levied in New Jersey other than that derived from corporations.

Irregularities in the postal service at Semarang, Java, led to an investigation which showed that the indolent native postmen had the habit of tying letters into bundles and dropping them into the river.

A knowledge of English is now considered necessary for business purposes in Mexico, and according to a decree published last September that language is hereafter to be taught orally in the public schools.

Near Rock Springs, Wyo., a big cottonwood, the size of an elm, six weeks ago with an antler of an elk imbedded in the trunk. The wood had grown around the antler and the tale of how it came there is lost.

To a group of friends Ellen Terry once said: "Acting is not like drawing. You make a line. If it is wrong you rub it out at once and make another. With acting that is impossible. There is always the possibility of a mistake. Oh, that is wrong, but as I meant it to be, let me see that part or sentence over again."

Although Anthony Trollope never smoked he liked being with those who did. It soothed his nerves, he said, and sent him to sleep. On one occasion, when he had just returned to London from South Africa, he was talking at the Comopolitan club to the late Lord Carnarvon, Lord Derby, Fremont, the historian, Lord Wolseley, and one or two others equally famous, on the future of the country. In the midst of the discussion Trollope fell asleep and, after a quarter of an hour's snoring, he awoke, shaking himself together like the faithful, growling Newfoundland dog he so much resembled. Dissatisfied even in his unconsciousness, he spluttered forth "I utterly disagree with every one of you. What is it you say?"

THE AZTEC CALENDAR.

Carved in the City of Mexico That Was Carved Over Four Centuries Ago.

One of the curiosities of all ages is built in the wall of the cathedral in the City of Mexico. It is the Aztec calendar, carved in 1517. While being carried to its destination it broke down a bridge and fell to the bottom of the lake in which the city was built, killing priests and people. The great difficulty it was raised out of the water. With other objects of heathen worship it was afterward hoisted in the marsh, as the best way to get rid of it. It is now, however, sold as the property of the National museum, says the New York Press.

The Aztec calendar is a solid piece of stone, 12 feet in diameter. It is divided into cycles, years and days. Fifty-two years constitute a cycle; the year 365 days, with five intercalary days wholly devoted to human sacrifices. Each year was by 20 days, and each month four weeks of five days each. The days had such names as Sun, Animal, Small Bird, Monkey, Rain, etc., and each of the 20 days. There is the sun and the furnace heat pouring up, blowing this way, the hook got hotter and hotter. There was no other way of getting down even. I was caught there.

"Finally, in desperation, I took off my undershirt and grabbed the hook with it. Blistered and burned, I half felt into my chair and managed to let myself down."

HEAD-DEADLY WEAPON.

As Declared by a West Virginia Judge in a Case of Assault and Battery.

According to a ruling in the circuit court at Welch, Marlinton county, W. Va., a negro's head is considered "a deadly weapon," says the West Virginia report from that section. Frank Martin brought suit for \$2,000 against James Knox, a prominent attorney at Welch, for damages sustained by being struck on the head with a steel knuckleduster. The attorney swore on the stand that he regarded the negro's head as "a dangerous and deadly weapon," and that he dealt him a few blows with steel knuckles. Evidence was obtained which went to show that Martin had at different times "battered" people out of his shop. The judge gave a verdict in favor of the defendant, ruling that under the circumstances he regarded the negro's head as a "dangerous and deadly weapon," and that the attorney acted in self-defense.

KING EDWARD'S STRAY DOG.

An Irish Terrier That Has Become a Great Favorite with England's Ruler.

Dignity, pomp and etiquette are particularly strong points with Edward VIII, says a London correspondent. The dog of the London Herald, and we believe no light-minded subject who overlooks the smallest detail of dress or deportment in the royal presence—that is, who battles all such subjects save one. The exception is Jack, a stray Irish terrier which strolled into Marlborough house not long ago, adopted the king without leave or ceremony. Jack obediently has mastered his fourth and has helped to run the empire ever since.

It can be said without exaggeration that no one item of the business of running of England gets so much attention daily as the care of Jack. His food and exercise are personally supervised by his royal comrade and the general question of his health and conduct are a matter of personal concern to the king.

Domestic Wireless Telegraph.

Marconi believes that in the near future time he will not fix a date for it—wireless telegraphy will become available for domestic and office use, when the present long distance apparatus is allotted to the telephone. He has already made experiments which convince him that it will be possible, with the aid of small models, or miniature apparatus, to transmit messages from the interior of rooms in the same city, or in the neighborhood of towns. The walls of the houses will form no obstacle, but one of the chief problems will be that of a proper attenuating the instruments to prevent interference of waves, and to secure privacy for the messages.

Do You Know How to Plant?

There are many historic trees in the country, and it is believed by the department of agriculture that interest in tree planting can be stimulated by distributing a limited number of these trees under proper direction. The seedlings, when grown, will be sent to schools in various parts of the country, and there will accompany each tree a concise statement setting forth the historic events connected with the tree itself and the growing of the seedling.

"Tommy Atkins" Pay.

The English soldier's pay is \$7.50 a month. The soldier of no other country, except the United States, gets so much.

One of His Troubles.

"Yes," commented Weary Willie, "die is sure a hard word."

"You seem to take it easy enough," commented the passing stranger.

"Dat's what it looks like," returned Weary Willie, "but 'tain't so soft as it looks. My, a feller can't lie in the shade of a tree more'n an hour or two afore the shadow shits an' he has to move over to keep in it."—Chicago Post.

A WARM SUGGESTION.

Made by a High Climber Who Has Had Some Hot Experiences.

"If you want to know what heat is," finally said the High Climber, in the "Autobiography of a High Climber," in Frank Leslie's Popular Monthly, "you must be at the top of a chimney where the furnaces are going at full clip below. I was painting up the sides of one high chimney in Massachusetts one hot summer day. I was up about 100 feet. I had done one, two, three sides, and now pulled myself up to shift my hook around to the fourth. My boss's chair swung down from this hook, you understand."

"It was hot enough anywhere on the top, but around the cap on the fourth side where the wind was blowing out the smoke and heat it was awful. I dropped my hook down and walked around to the cooler side to rest a bit. Around the cap I had a space of about a foot's width to walk on. In a moment I went back and put my hand on the hook to slide down the rope to my chair. Gee! I thought the hair would come out of my head. My shoes fused. The hot iron of the hook blistered my hands. I could stay nowhere near it."

"Again and again I went back to that hook. Each time I was driven to the other side. There in the sun and the furnace heat pouring up, blowing this way, the hook got hotter and hotter. There was no other way of getting down even. I was caught there."

"Finally, in desperation, I took off my undershirt and grabbed the hook with it. Blistered and burned, I half felt into my chair and managed to let myself down."

MISCHIEVOUS MARMOSETS.

Queer Little Pets of a Washington Woman Cut Up All Sorts of Funny Capers.

Two small marmosets less than a year old have satisfied a Washington lady, whose pets they are, that some monkeys possess not only intelligence and affection, but also something akin to a conscience. The Washington Post gives a most interesting account of some of their characteristics.

The marmosets are full of mischief, playful ways, and are great sources of amusement. They will steal all the hairpins and knickknacks from their mistress' dressing table. Then the lady calls forth a pretty display of conscience on the part of her pets.

Upon discovering their pilfering she puts her hands to her face and shows signs of grief. The marmosets watch her for a minute and seem distressed; then they apparently console themselves together, and finally one goes to their hiding place and brings back a hairpin and lays it down.

The lady recovers it, but still keeps her face covered and seems to weep. Then the other monkey will bring her several more things. They climb up to her in the prettiest way and try to hold her fingers from her eyes so she can see the hairpin she desired, but no, she weeps harder than ever, and in an agony of contrition the marmosets race off and fetch in all their booty, whimpering softly and doing everything they know how to do to make amends.

Then the lady smiles upon them and praises them, and the little creatures caper with delight and content over their mistress' with their tiny paws. After this they are on their good behavior for several days.

MOUNT ETNA STILL SLUMBERS.

The Great Sicilian Volcano Has Remained Quiet Since the Last Eruption.

The height of Mount Etna, the famous volcano of Sicily, has long been fixed at 10,924 feet. It might have been more accurately measured by trigonometrical processes and the exact elevation is found to be 10,771. The difference is not important, but the exact determination will, of course, be given on the map hereafter published. The main crater has a width of 1,728 feet and a depth of 826 feet. Mount Etna has periods of almost complete quiescence. Six years had elapsed after the eruption of 1902, when in the autumn of 1894 flames began to emerge from the mouth of the largest crater and a great deal of vapor was emitted from the lesser orifices. It was then announced that Etna seemed to be preparing for an eruption of lava, probably on the south or southeast slopes. The expected eruption, however, did not begin till the morning of July 19, 1900, when great volumes of smoke and lava began to issue from the main crater, but after several days the activity gradually subsided, and Etna soon resumed its peaceful aspect and has since seemed to be in a slumberous condition.

If the Pope Lives a Year.

It is pointed out that if Leo XIII. is spared to see the year 1903, that year will be to him one of quite exceptional interest, a veritable "annus mirabilis," says the London Tablet. As everybody knows, it will be his silver jubilee of papacy (eleventh pope February 20, 1879), but more than that, it will also be his golden jubilee as cardinal (proclaimed by Pius IX. in the consistory of December 19, 1833), and his diamond jubilee of episcopacy (proclaimed archbishop of Damietta by Gregory XVI. on January 27, 1843, and consecrated February 19, see a triple jubilee, if his holiness lives to celebrate it, will probably be unique in history.

A Wonderful Invention.

It is interesting to note that for times are frequently made by the invention of articles of minor importance. Many of the most popular devices are those designed to benefit the people and most popular conditions, and one of the most interesting of these that has ever been invented is the Dr. White Electric Comb, patented Jan. 1, '90. These wonderful combs positively cure dandruff, hair falling out, sick and nervous headaches, and when used in connection with Dr. White's electric Hair Brush are positively guaranteed to make straight hair curly in 25 days' time. Thousands of these electric combs have been sold in the various cities of the Union, and the demand is constantly increasing. Our agents are rapidly becoming rich selling these combs. They positively sell on sight. Send for sample. Men's size \$2, ladies' 50—half price while we are introducing them. See Want Columns of this paper. The Dr. White Electric Comb Co., Decatur, Ill.

Startling Evidence.

Fresh testimony in great quantity is constantly coming in, declaring Dr. King's New Discovery for Consumption Coughs and Colds to be unequalled. A recent expression from T. J. McParland, Bentonville, Va., serves as example. He writes: "I had Bronchitis for three years and doctored all the time without being benefited. Then I began taking Dr. King's New Discovery, and a few bottles wholly cured me." Equally effective in curing all Lung and Throat troubles, consumption, pneumonia and Croup. Guaranteed by E. C. Peery, druggist. Trial bottles free, regular sizes 50c, and \$1.00.

Notice of Public School Examination.

Notice is hereby given that the final Eight grade examination for the public schools of Linn county, will be held in compliance with the rules of the State Board of Education on the following dates, April 8 and 9, May 20, 21, and 22, June 17, 18 and 19.

Teachers having pupils who have completed the work in the Eight grade should make application for the examination thirty days prior to the examination. W. L. Jackson, Co. Supt.

Notice to Bicycle Riders.

It shall be unlawful for any person or persons during the months of April, May, June, July, August, September and October in each year to use any sidewalk or crosswalk, except to cross over a crosswalk, within the corporate limits of the city of Scio by riding a bicycle, tricycle or tandem of any kind thereon during said months. Ordinance No. 48.

J. A. BLYLER, City Marshal.

Market Report.

Following is a report of produce in the Scio market:

Eggs, 15c doz.
Chickens, 10c per lb.
Geese, \$5.50 to \$7.50 per doz.
Ducks, \$7 to \$8.50 per doz.
Butter, 35c to 40c per roll
Beacon, 14c lb.
Hams, 12c lb.
Lard, 15c lb.
Potatoes, 25c per bu.

Theford's Black Draught has saved doctors' bills for more than sixty years. For the common family ailments, such as constipation, indigestion, hard colds, hoarse complaints, chills and fever, biliousness, headaches and other like complaints no other medicine is necessary. It invigorates and regulates the liver, aids digestion, stimulates action of the kidneys, purifies the blood, and cures the worst of food accumulations. It cures liver complaint, indigestion, sour stomach, dizziness, chills, rheumatic pains, headache, backache, kidney troubles, constipation, diarrhoea, biliousness, piles, hard colds and hoarseness. Every drug-gist has Theford's Black Draught in 25 cent packages and in many other sizes for \$1.00. Never accept a substitute. Insist on having the original made by the Chattanooga Medicine Company.

I believe Theford's Black Draught is the best medicine on earth. It is good for any and everything. I have a family of twelve children, and for four years I have kept them on food and health with no doctor but Black Draught. A. J. GREEN, Brewer, La.
