J S Holland to O J Mealy 160 acres 1

Mortgages for $200, 300, 625, 1500.

### Dairy Notes.

It is the herd of special purpose dairy cows we want, and not the herd kept to furnish chores for the owner and hired man.

There are good many reasons for every point of make up in a good dairy cow, and dairy type is not an accident—not something that just happened—but the result of a certain and careful selection and breeding.

Cows differ just as much in their tastes and requirements as persons. To feed all the cows in the herd alike day after day, is not only a wasteful but unprofitable way of doing as some will get too much and others not enough.

The good Lord has given us one of the most productive states in the Union. In Oregon and the Willamette Valley can be raised all kinds of grasses and different kinds of grain necessary for the keeping of animals, and he has left it for us to formulate and balance up rations in a suitable way. Upon the ability to do this depends largely the farmers' success.

The time is near at hand when the farmer will not think about getting along without a cream separator any more than he would a mower or binder. It is a piece of machinery found to be efficient and useful in the saving of the labor and profits connected with the dairy.

Experience has demonstrated it to be a hopeless task to make a first-class article of butter from hand-skimmed cream.

### BRAVE AND TRUE.

**The Commendable Ambition of an Indian Soldier.**

Gen. Sir Hope Grant, in his narrative of the Indian mutiny, relates an anecdote which does equal honor to himself and one of his native soldiers. The British had been fighting all day, driving the rebels before them. After nightfall, however, a party of rebels made a new demonstration, and Gen. Grant, seeing two of his guns in danger, collected a few men and charged. He says:

"A sepoy within five yards of me fired at my horse and put a bullet through his body. It was singular he did not aim at me, but probably he thought it best to make sure of killing the horse, after which the rider would fall into his hands as a matter of course.

"I felt that my poor charger had received his death-wound, get he galloped on for forty yards through the throng of rebels and then dropped. I was in an awkward predicament—unhorsed, surrounded by the enemy, and, owing to the darkness, ignorant in which direction to proceed—when my orderly, a native horseman, Hooper Kahn by name, rode up to me and said: 'Take my horse; it is your only chance of safety.'

"I could not but admire his fine conduct. He was a Hindostanee Mussulman, belonging to a regiment the greater part of which had mutinied, and it would have been easy for him to kill me and go over to the enemy.

"I refused his offer, but, taking a firm grasp of his horse's tail, I told him to drag me out of the crowd. This he did successfully and with great courage.

"The next morning I called him to my tent, praised him for his gallant behavior and offered him some little money. He declined it with great dignity.

"'No, sahib, I will take no money,' he said, drawing himself up; 'but if you will get my commanding officer to promote me I shall be very grateful.'

"He was duly promoted, and received also the second-class order of merit."

## FEVERISH ACTIVITY.

### The Average American Is Always Under High Pressure.

**Notwithstanding Which It Is Shown by Insurance Statistics That Men Are Living Longer Than Their Fathers Did.**

There is harly a week that we do not see in some journal or newspaper an allusion to the high-pressure of American life. It is taken for granted that the only pace that kills is our own, and we are shortening our lives and bringing on early death by the strain, says American Medicine. In a recent number of the Nineteenth Century and After, for instance, a writer, plainly one of those self-destroying Americans, writes as follows:

"The average American in every branch of business wears out his physical powers before his time; and only too often under the self-imposed strain, his mental powers break down also; but the high pressure at which he works in the maturity of his strength, intellectual and physical, however bad for himself in the end, is very good for the community in which he lives. Thousands and tens of thousands fall in their tracks, like soldiers in the fire and smoke of battle, victims of their own overstimulated energies; but their places are promptly taken by younger men, animated by the same indefatigable and unfaltering spirit. The community is practically made up of men working at a white heat, and its progress is hastened by the very fact that this heat is so consuming that before it dies out in the average individual it injures if it does not destroy him."

We have often been minded to deny the allegation, but upon second thought have not done so, because of the great difficulty that exists in getting at scientific disproof. It is a huge task to collate and analyze the statistics necessary to make the correction of the error anything more than an error itself—mere assertion without basic fact. We are as little inclined as another to justify the overstrain and feverish commercialism, but we believe that these are unwise, chiefly because of other reasons than those pertaining to vital statistics. The fallacy of the scoffer at American high pressure lies doubtless in the fact that everyone has the virtues of his defects, i. e., that we have other qualities which more than compensate in a life-lengthening way for the waste or shortening of our strain. The insurance statistician, Frederick L. Hoffman, makes a statement which, if true in all its details, should be laid before the scholars of the old charge against the fast-living American.

"It is a matter of great importance to note that there has been a material increase in the number of those who survive at the ages of 30, 40 and 50 in the United States, and the number will probably continue to grow, as the conditions of city life are improved.

"At present in Massachusetts there are expected to survive at the age of 30, 3,275 persons out of every 10,000 born, against 4,460 survivors out of the same number in 1855. At the age of 80 the number of survivors is 1,366 at present, against 1,659 half a century ago. Therefore most valuable lives, valuable because of enhanced intelligence and comprehension, have been saved to the state because of the sanitary and other social progress made during the last 50 years. This country is more healthy, with the exception of Norway and Sweden, than any part of Europe, and the effect of the intense struggle for success on the part of our business men and women is more than balanced by our higher standards of living, which tend to make our people continue along the line of improvement. While it is impossible to arrive at final conclusions on the basis of our industrial or ordinary experience, because of the careful medical selection exercised in insurance practice, the facts established by other investigations indicate that the adult foreign-born citizen is subject to a lower mortality in the United States than in his own country, and it may be safely assumed that any inherited tendency to early decay will be more than balanced by the healthier conditions of life in our country. A comparative mortality table shows that close behind Norway, and ahead of Great Britain, France, Germany and ahead of other states of our country, New Jersey has the lowest death rate. The chance of attaining the age of 100 in Massachusetts is today ten times what it was half a century ago.

"Certainly the facts are abundant tending to prove that old age is being attained by men and women in this country with an increasing degree of frequency, and, what is better, to quote an authority: 'It is certain that our American men at 60 are not broken up as badly as our fathers were at 40.'

**First-Aid Lighthouse.**

An ambulance in a lamp post is the latest idea in street contrivances. Paris has just been endowed with several specimens of what is called a "phare de secours," or first-aid lighthouse. It consists of an ornamental bronze pillar about 15 feet high, with a round overhanging top resembling that of a lighthouse, and containing a clock-face barometer and three transparent advertisements, revolved by clockwork, and lighted by gas from within. In the case of the pillar is a letter-box and in the shaft is a folding stretcher, with printed directions for affording first aid to the injured.—Detroit Free Press.

**Automobiling Revealed.**

Mr. Perfume—I thought when you sold me this automobile you guaranteed it to be a first-class hill-climber?

Dealer—U'm!

"Well, the only thing it has shown any tendency to climb has been telegraph poles."—Puck.

Pickpocket (nonchalantly)—Oh, not more than two or three months.

Lawyer—Only two or three months, eh? How do you expect the court to believe that statement in view of the fact that it has had police testimony to the effect that you are an expert?

Pickpocket (smilingly)—Oh, well, you must remember that I had the benefit of a three years' previous practice in your profession.—Richmond Dispatch.

## BARBARIC PAGEANT.

### Sir Philip Burne-Jones Amazed at Extravagance of Newport.

**The Famous English Painter Declares That Only Old Rome or Babylon Saw Anything Like the Women, Gowns and Jewels.**

Sir Philip Burne-Jones, the famous English painter, who was at Newport, R. I., this summer, appears to have been about as definitely impressed by the "400" as Col. Watterson of the Louisville Courier Journal, has been.

The difference in the point of view held by the artist and that of the editor is that the former is dazzled by the barbaric extravagance of the millionaires who flock to Newport. Sir Philip before leaving Newport discussed the fashionable set as follows:

"Display never was so organized and perfected as at Newport. The overwhelming extravagance of it all is a new thing in the world. It is like the pageant of some splendid barbaric dream.

"I say there is nothing like it anywhere else. There could not be in France, of course. Italy is out of the question. Germany has nothing and certainly England has nothing that resembles it.

"The atmosphere of wealth really is oppressive. It rather numbs one—produces in a man of moderate means a feeling of abject poverty, begets a feeling quite as if one were trailing about in rags, you know.

"The women, their gowns, their jewels, the splendor of these houses—maybe Rome saw something like it, or Babylon, but surely we have to go back to those fabled days to find anything to liken all this to.

"It is a tremendous spectacle; it is a colossally sumptuous picture. Their clothes are so overpowering, so aggressive and insistent—a phenomenon. Their souls probably are way down somewhere, wrapped up, hidden away, buried, but one does not easily catch sight of them. It is difficult to get at their real selves because of their clothes, their gorgeous clothes.

"Oh, I shouldn't care to speak of it from the artist standpoint. Neither do I understand that the display of taste is the object of it all. As a pageant it is gigantic and will never be rivaled."

**Army Impediments.**

Armies are adding so many curious vehicles to their impediments that it is a grave question in some quarters whether their mobility will not be seriously impeded in future wars. There were the movable forge, the movable crematorium, the hospital, the ice machine, and now comes the traveling disinfecting apparatus. The latter is a wagon so fitted that it can readily move from camp to camp to disinfect the clothing of the soldiers.—Chicago Inter Ocean.

**Many Sources of Sugar.**

Sugar exists not only in the cane, beetroot and maple, but in the sap of 197 other plants and trees.—Science.

**Lowest Lying Land in England.**

The marshy district called "The Fens," which occupies the northern half of Cambridgeshire, the southeastern corner of Lincolnshire, and parts of Norfolk, Suffolk, Huntington and Northampton, extending 50 miles from north to south and 30 miles in its greatest breadth, and covering an area of 750,000 acres, is the lowest land in this country. The surface of "The Fens" is, on the average, eight feet below the level of the North sea, varying from four feet to 16 feet below the level of high-water mark.—Tit-Bits.

# Consumption

Salt pork is a famous old-fashioned remedy for consumption. "Eat plenty of pork," was the advice to the consumptive 50 and 100 years ago.

Salt pork is good if a man can stomach it. The idea behind it is that fat is the food the consumptive needs most.

Scott's Emulsion is the modern method of feeding fat to the consumptive. Pork is too rough for sensitive stomachs. Scott's Emulsion is the most refined of fats, especially prepared for easy digestion.

Feeding him fat in this way, which is often the only way, is half the battle, but Scott's Emulsion does more than that. There is something about the combination of cod liver oil and hypophosphites in Scott's Emulsion that puts new life into the weak parts and has a special action on the diseased lungs

A sample will be sent free upon request.

Be sure that this picture in the form of a label is on the wrapper of every bottle of Emulsion you buy.

SCOTT & BOWNE, CHEMISTS, 409 Pearl St., N. Y.

50c. and $1; all druggists.

### A DEADLY TRAP.

**Catching a Thief with a Pocket Lined with Fishhooks.**

They were discussing the best way to bring a prisoner from the place of his arrest to headquarters at the central office not long ago, says the New York Times, and the collar, cuff, and armgrips were instanced as manual expedients, and handcuffs, nippers and pocket bludgeon thongs as mechanical aids.

"I know," said a detective who had been to Europe and pssssed some time in the society of London detectives, "how a pickpocket was once arrested without his captor seeing his prisoner's face before he got to the lockup, and without anyone putting a hand on him. It happened this way: A detective who was often detailed to gatherings, weddings, the houses of parliament, Westminster abbey, and other public places, often ran across a wiry little man who he discovered had no business where he was seen, and did nothing for a living.

"Coincidental with the man's visits to crowded places were complaints of larcenies of articles that were carried in the pockets of tails of coats, and especially silk handkerchiefs. The detectives suspected the little wiry man, but he evidently had more than one confederate to pass what was stolen so as to be 'clean,' for the officer who was watching him, and who was nettled at reproof from his superiors for his negligence in not discovering the pickpocket, had him arrested twice by other officers and 'shaken down' without finding any stolen goods in his possession.

"Strange officers were used to make the arrests in order that the suspected man might not become familiar with the principal detective's face, as he determined to get him 'by hook or by crook.' Now I don't mean this for a pun, but it came out that way. The detective belonged to one of the many fishing clubs that abound in London, and was familiar with tackle.

"Procuring four dozen unsnelled hooks of the size and strength used here for blackfish, some flax thread and a needle, he passed an afternoon in turning the tail-pockets of an old-fashioned frock coat into a thief-trap. The hooks were ringed and with the needle were sewed bent out just inside the pocket, permitting a hand to enter, but preventing its withdrawal. He knew of a book sale that would be largely attended at the east end of the Strand and made up carefully for it, so that when he left home he was a pleasant-faced old gobemouche.

"At the book sale he took care to be as vacuous and unmindful of his surroundings as possible, but noted the presence of the suspect and waited calmly for a bite. It came. There was a tug at his coat and a bitter oath, and he knew that his man's hand was seized by the hooks, and that he would not venture to risk the agony that tearing away forcibly would inflict. So he said quietly: 'If you follow me our surgeon will relieve you,' and attempted to walk to Scotland Yard, half a mile away, the trapped thief following with his hand in the detective's pocket.

### COAL WASTED IN MINING.

**Twenty-Two Per Cent. of the Total Output of English Mines Annually Lost.**

"It has been recently computed that more than 50,000,000 tons of coal are wasted every year in the mine." So said J. Stephen Jeans in addressing the South Wales Institute of Engineers, reports the London Telegraph. This waste is that mainly of small coal, and is, of course, quite independent of the reckless and useless consumption that goes on in nearly every domestic grate and at every furnace. Even this huge figure is less than it used to be, for, with the general adoption of coal washing plants, the introduction of producers capable of using small coal in the making of gas and the manufacture of briquettes, the loss has been reduced. It forms still 22 per cent. of the total output, and represents a money sacrifice of £20,000,000. Allowing 10,000,000 homes in the United Kingdom, these 50,000,000 tons would allow five tons per annum for every family. A high authority (Forster Brown) reckons that at the existing rate of consumption (and waste) "within 40 years from the present time an increase in the cost of coal will begin to be felt as a new element in the commercial position of the nation." Mr. Jeans thinks this estimate too pessimistic, but if we allow twice 40 years it is a terribly short time in the life of a nation. Most people ignore the fact that the exhaustion has begun. In the Northumberland coal field most of the thick seams are worked out, and it has now become necessary to work seams from two feet to two feet six inches thick, which is reducing the output per man by from 15 to 20 per cent.

### HAD HIM FAST.

**A Yankee's Remark at the Tomb of Lord Nelson.**

The English people will never understand the humorous temper of the American, which makes him ask such questions as that recorded by Mark Twain as having been asked by a friend of his in the British museum. A guide had exhibited an Egyptian mummy, and discoursed long upon the antiquity of it, and the Egyptian process of embalming, and so forth; and at last the American asked: "Is he dead?"

It was only recently, according to a letter in an exchange, that in St. Paul's cathedral a London guide held forth thus to an American gentleman:

"That, sir, is the tomb of the greatest naval 'ero Europe or the whole world ever knew!"

"Yes?"

"It is, sir, the tomb of Lord Nelson. This marble sarcophiggus weighs 42 tons. Hinside that is a steel receptacle weighing 12 tons, and hinside that is a leaden casket, 'ermetically sealed, weighing two tons. Hinside that is a ma'ogany coffin 'olding the ashes of the great 'ero."

"Well," said the Yankee, after reflecting a moment, "I guess you've got him. If he ever gets out of that, telegraph me at my expense."

—The number of asteroids discovered up to the present date is 423. A number of these small planets have not been observed since their discovery and are practically lost. Consequently it is now a matter of doubt, until the elements have been computed, whether the supposed new planet is really new or only an old one rediscovered.

### THE FRUIT PLETHORA.

**Fine Apples Fed to the Pigs Because of the Superabundant Product of the Orchards.**

Rarely, if ever, has there been such a superabundance of fruit as now abounds in the New England orchards. The limbs of the apple and pear trees hang heavy under the weight of their enormous yield, and the ground beneath the trees is covered with the decaying droppings. In some localities fine apples may be had for the picking, and an offer of half a dollar a barrel for the fruit on the tree is eagerly accepted in the rural districts. Thousands of bushels are being fed to the cattle and pigs and the cider mills are glutted with raw material for the presses. It seems a pity to see such a large quantity of fine fruit going to waste. It is almost superfluous to offer suggestion in the line of thoughtful philanthropy to Dr. Hale, but the glutted condition of the orchards suggests that it might be a good idea to renew his farmers' fruit offering scheme, which furnished such a liberal supply of free fruit to the poor people of Boston when it was originally undertaken. Undoubtedly a great many bushels of apples can now be had for the asking.

### WRITING THE PROTOCOL.

**Difficulties in Making the Chinese and French Languages in the Text Agree.**

The Peking correspondent of the Echo de Chine says that the Chinese authorities were much gratified on the Palace of Ancestors being handed over to them by the French military authorities, to find that nothing had been touched and that all the relics of the dynasty had been respected by the French. Among the objects returned to the Chinese were half a million of pearls and the cases with the collection sent to France by Gen. Frey and returned by order of the minister of marine. The correspondent also says that the terms of the final protocol were fixed on August 15. The paper employed was fine Japanese paper, thick and of square form, furnished by the bishopric.

The text was written in French and Chinese and long sittings were necessary by Messrs. Morrisse, Campbell and the other interpreters of the legations to resolve the little difficulties resulting from the juxtaposition of the two texts. It is known, in fact, that the Chinese etiquette demanded that the name of the emperor and other great personages should be put at the head of the lines in a manner to be above the context, and this rendered almost impossible an agreement between the two transcriptions. The sensational story about the meetings of the diplomatic corps having been suspended because Britain refused its adhesion to the question of the raising of the customs tariffs, says the Shanghai Mercury, is absolutely without foundation.

BLACK-DRAUGHT STOCK and POULTRY MEDICINE

Stock and poultry have few troubles which are not bowel and liver irregularities. Black-Draught Stock and Poultry Medicine is a bowel and liver remedy for stock. It puts the organs of digestion in a perfect condition. Prominent American breeders and farmers keep their herds and flocks healthy by giving them an occasional dose of Black-Draught Stock and Poultry Medicine in their food. Any stock raiser may buy a 25-cent half-pound air-tight can of this medicine from his dealer and keep his stock in vigorous health for weeks. Dealers generally keep Black-Draught Stock and Poultry Medicine. If yours does not, send 25 cents for a sample can to the manufacturers, The Chattanooga Medicine Co., Chattanooga, Tenn.

ROCHELLE, GA., Jan. 30, 1902. Black-Draught Stock and Poultry Medicine is the best I ever tried. Our stock was looking bad when you sent me the medicine and now they are getting so fine. They are looking 20 per cent. better.

S. P. BROCKINGTON.

**Proper Treatment of Pneumonia.**

Pneumonia is too dangerous a disease for anyone to attempt to doctor himself, although he may have the proper remedies at hand. A physician should always be called. It should be bourne in mind, however, that pneumonia always results from a cold or from an attack of the grip, and that by giving Chamberlain's Cough Remedy the threatened attack of pneumonia may be warded off. This remedy is also used by physicians in the treatment of pneumonia with the best results. Dr. W J Smith, of Sanders Ala. who is also a druggist says of it: "I have been selling Chamberlain's Cough Remedy and prescribing it in my practice for the past six years. I use it in cases of pneumonia and have always gotten the best results. For sale by all dealers.

**Borgia's Later Years.**

In the National library of Florence an Italian historian has found a document which contains many interesting and hitherto unknown facts in regard to the latter years of the famous Lucrezia Borgia. According to it she took the veil and joined the congregation of the Brothers and Sisters of Penitence, which is better known under the name of "Tertiaries of the Order of St. Francis." She received the veil from the vicar general, Ludovico de la Torre, and Giovanni Gonzaga wrote to her uncle that during the last ten years of her life she wore a penitential shirt. She died in 1518 and was buried in the robes of her order.

**Anger Cures Deafness.**

Here is a novel cure for deafness. According to several Dutch papers a deaf woman, who resides at Kromenie, had a quarrel a few weeks ago with some of her neighbors, and as a result got into a violent passion. As she is 70 years old, her friends feared that this sudden and terrible outburst of anger would injure her, but instead it completely cured here of her deafness.

**In Memory of Victoria.**

It has been decided to found an eye hospital and an asylum for the blind as Ceylon's memorial to the late Queen Victoria.

**Bosnia Timber for South Africa.**

Timber is being exported from Bosnia to South Africa to be used in rebuilding farms destroyed during the

—Stories of the ravages of termites, or "white ants," come from the curator of the Australian museum at Sydney. Some time ago they destroyed the roof of the museum building, and it had to be replaced with a covering composed largely of steel and copper. Their work, being carried on in the interior of the timber, does not reveal itself until the structure is about ready to fall to pieces, and so it was only recently that the fact came out that the ants had also destroyed the underpinning of one of the important floors of the museum.
