Willamette Valley Crops.

Polk County—Weather changeable; corn growing very slowly; all other crops doing fairly well.

Benton County—Weather warmer; gardens have made good growth; grain heading; strawberries ripe, but very poor crop; fruit doing well where the caterpillars have been destroyed.

Marion County—Weather has turned hot and everything is making a good growth: hops, grain, fruit and potatoes look well; early hay will be ready to cut soon; the hay crop promises well; late potatoes about all planted.

Washington County—Cloudy weather has given place to sunshine and all vegetation is making good growth; oats will be very short; hay light; gardens doing very finely; stock in good condition; green aphis numerous.

Yamhill County—First of week cool and cloudy with light showers, latter half clear and warm; crops doing fairly well; aphis and fly have caused little damage so far; hops poor, from half to two-thirds of a crop; few early apples; cherries half a crop; prunes fair; pastures good; stock doing well.

Linn County—Fair and warmer weather gardens growing nicely, especially potatoes; corn is changing color, and if the warm weather continues it will grow rapidly; spring grain looks well and is growing nicely, but the aphis is working on it in some localities; fall grain in head, but some pieces of wheat will be very light on account of the Hessian fly; the hay crop will be about average; vetch will make a large crop; cheat will be light.

Clackamas County—Warmer weather has had beneficial effect on all crops; hops have improved considerably in certain locations, but many yards will not yield one-fourth of average crop; vermin is also on the increase; fall wheat and oats appear to be filling well; barley and rye beginning to turn; clover will yield only half crop, and second or seed crop may be counted on being decidedly short; it appears that the clover roots died owing to last year's dry spell; the same holds good as to hops; it was found this year that the hop stools had made very few new roots; pasturage good and stock in fine condition; gardens making rapid growth; all varieties of fruit will be short in this section.

New Potatoes Every Day in the Year.

New potatoes every day in the year, grown without vines or any visible sign of growth, is the claim of a Great Falls, Montana, inventor. He says this has been accomplished after a series of experiments lasting more than five years. To a number of friends he showed his invention, showing the potatoes in varying stages of growth.

The inventor has been in correspondence with a Chicago man, who states that new potatoes are worth 8 cents a pound at Christmas, and that if the invention is what is claimed for it, he will give $100,000 for it or a controlling interest.

The experiments are conducted in a box 8x4 feet, at the bottom of which is a coil of pipe for heating purposes. First, there is a layer of substance resembling soil upon which is laid a layer of potato eyes, then more soily substance which takes the place of oxygen and confines growth solely to the tubers, thus eliminating vines and rendering the potatoes impervious to frost. The name of the inventor is not made public, but it is announced from an authoritative source that he is a man of absolute integrity.

Peace Most Probable.

At press time the indications are that the negotiations now in progress between Japan and Russia will culminate in the closing of the war. Both nations have selected commissioners, and they are arranging the place and time of meeting. It is thought that Russia will accept Japan's terms in their leading features at least, though she will probably object to almost everything at first. Japan, however, seems to be onto her job and will be apt to hold out for all the main points of contention. In the meantime, Oyama has begun a general advance upon the Russians, and a general battle may occur within the next day or two.
