Avoid Sedative Cough Medicines.

If you want to contribute directly to the occurrence of capillary bronchitis and pneumonia use cough medicine that contain codine, morphine, heroin and other sedatives when you have a cough or cold. An expectorant like Chamberlain's cough remedy is what is needed. That cleans out the culture beds or breeding places for the germs of pneumonia and other germ diseases. That is why pneumonia never results from a cold when Chamberlain's cough remedy is used. It has a world wide reputation for its cures. It contains no morphine or other sedative. For sale by all dealers.
