MUNKERS STAGE

Roe Shelton, Prop.
Phone 6-515
Leave calls for meeting evening motor.
Stage meets all Munkers trains, leaving Scio hotel at 8:15 a m and 2:55 p m

PROOF POSITIVE.

"Wasn't So Positive, Though, When Another Test Was Tried."

Young Mrs. Sydney was a great friend of Dr. Careful, and she did not hesitate to call him up on the telephone when she needed advice.

"Doctor," she demanded one morning, "is it safe for my Rachel to play with the Crockett children yet? None of them has ever had whooping cough, and I wouldn't have little Paul take it for the world."

"How long has Rachel had it?" asked the doctor.

"Nearly seven weeks," said Mrs. Sydney. "She doesn't whoop a particle, but still—"

"Proof positive that she's all over it," broke in the doctor hastily. "I should say it was all right to let her play with the other children."

"Thank you," chirped Mrs. Sydney, but she hung up the receiver with a meditative air and shook her head when Rachel teased her to go over to the Crocketts.

"No, you are to stay in your own yard this morning. You can't play with Marjorie until mother gives you permission."

An hour or two later she went again to the telephone. "I wouldn't have Baby Crockett catch whooping cough for anything," she said to herself, and she called up Dr. Careful again. "Oh, Dr. Careful, could you tell Mrs. Careful that Rachel and I will drop in for a few minutes this afternoon? Rachel is very anxious to show her big doll to your Edith."

"Very well," responded the doctor, without any visible show of enthusiasm.

"Thank you ever so much," said Mrs. Sydney politely. "I'll wait a few minutes before I let Rachel out," she decided. "I shouldn't be exactly surprised if the doctor changed his mind."

Then her telephone rang. "Mrs. Sydney," said a very polite voice, "perhaps it would be wiser to wait until next Saturday before Edith and Rachel have their little visit. There's no doubt in my mind that Rachel is all over it, still, it's always wise to take precautions, and Edith is so very susceptible that perhaps—"

"We'll make it next Saturday," said Mrs. Sydney good naturedly. Then she turned to her small daughter.

"By next Saturday, dear, it will be perfectly safe for you to play with the Crocketts."—Youth's Companion.

Not So Great, After All.

Sir Robert Ball, the famous English astronomer, used to tell a little story of an experience that he had when he was at the Dunsink observatory. A farmer came to him one day and asked if he might look at the moon through the telescope.

"Surely you can," said Ball. "Come round tonight, and I shall be very happy to let you see it through the telescope."

"Can't I see it now?" asked the farmer, surprised.

"I am sorry that you cannot," said the astronomer. "You will have to wait until night."

"Huh! Then your old telescope is not so great a thing as I thought it was!" cried the man, relieved from his illusion. "I can see the moon at night without it."

See Economics.

The organization of bee life is a fascinating study. The workers in a beehive may be divided into (1) harvesters, who bring in honey and pollen from flowers, wax from buds of pines and poplars, water to mix with pollen and honey to make the pasty food for the larvae; (2) scavengers, who in early morning carry out debris, including dead, sick or injured workers; (3) ventilators, who stand erect and keep their wings in continual movement in order to ventilate the hive; (4) guards, who defend the hive from wasps, robber bees and other enemies.

A Strong Hint.

They had met for the first time since their school days and were telling each other of their professional careers.

"And how did you come to leave the stage?" asked one.

"I had a hint that I was not suited for it."

"I see. The little birds told you, eh?"

"Well, no; not exactly. But they might have been birds had they been allowed to hatch."

Clothes and the Law.

Queen Elizabeth made many laws respecting the costumes of her subjects, according to historians. She commanded the lower classes to wear a cap of a certain shade on Sunday, also that it should be made of wool and manufactured in Britain. It was Queen Elizabeth who spoke of those engaged in the hating business as gentleman haters.

Thunderstruck.

A terrific thunderstorm was raging, and Mrs. Simmons promptly shut herself in a closet until it ceased.

"Mercy," she exclaimed afterward, "but that was an awful storm! The thunder frightened me terribly!"

"Pooh!" remarked Mr. Simmons. "Thunder can't hurt you."

"Indeed! Can't it? Didn't you ever hear of a person being thunderstruck?"—National Monthly.

WEIGHT OF MATTER.

It Remains Constant Despite Any Possible Change in Form.

Not only is the force of gravity, which we call weight, dependent simply on the mass of a body, without regard to its nature or chemical composition, but it is independent also of its physical state of aggregation—that is to say, a given quantity of matter weighs exactly the same (as nearly as can be ascertained by exact experiment) whether it be in the solid or liquid or gaseous state; whether it be heated or cooled, boiled or frozen; whether it be decomposed or burned, or whatever may be done to it, there seems literally no way of changing the force with which the earth attracts it, except by either removing it farther from the earth or lowering it down a pit into its interior, in either of which cases the force diminishes in a perfectly simple and easily calculated manner.

The weight of a body diminishes, whether it be taken up above the surface or be lowered beneath it. The latter diminution of weight is because some of the earth's crust is now above the body and pulls it up instead of down. A thing weighs most at the earth's surface. That a body should weigh a little less at the top of a mountain or in a balloon seems obvious enough, but that it should weigh rather less in a coal pit is not so obvious. It may be thought of as then being outside a smaller earth—an earth with a film of skin virtually removed. For Newton showed that inside the hollow of a uniform eccentric spherical shell there would be no force at all except what might be generated by pieces of matter inside that hollow.

The best known variation of weight is that caused by carrying a body from pole to equator, for that is equivalent to carrying it a little farther away from the main bulk of earth because of its oblate shape. At any given place the weight of a given quantity of matter under all conditions is constant.—Sir Oliver Lodge in Harper's Magazine.

Collier's The National Weekly

First Time in Clubs
Until this year Collier's has been sold at \$5.50. Now the price is \$2.50 and we have secured a concession whereby we can offer it at a still further reduction in connection with this publication.

Special Offer to Our Readers

Recognizing the great demand for Collier's at the new price, we have made arrangements to offer it and our own publications each one year for the price of Collier's alone. This is a limited offer and must be taken advantage of promptly.

What You Get in Collier's

Collier's is the one big, independent, fearless weekly of the whole country. Not only is it the good citizen's handbook but it is also a magazine for the whole family. Among the things that a year's subscription gives are:

- 1000 Editorials
- 600 News Photos
- 250 Short Articles
- 150 Short Stories
- 100 Illustrated Features
- 2 Complete Novels

Collier's . . . \$2.50
Santiam News . . . \$1.25
Both in club \$2.50
