

HOGWALLOW NEWS

DUNK BOTTS, Regular Correspondent
(Copyrighted, 1915, George Bingham)

Sile Kildew mounted his mule Thursday morning and rode down the Gander Creek road, rendering sweet strains on a hand organ he had just become the owner of. He would like to have an automobile, but as he can't be found this will scare just as many mules and horses as anything else.

Tobe Moseley had such a hard chill Tuesday it started his watch to running.

Miss Flutie Belcher is trying to develop a double chin by sleeping with three pillows under her head.

Since the nights have grown warm Isaac Hellwanger has begun to sleep with his whiskers out from under the covers.

Sim Flinders has rheumatism in his right wrist so bad that he can barely lift a jug off the floor.

A gentleman whose name we cannot at present remember has opened a store at Musket Ridge. It is not believed that he will get enough business to justify his continuance, as he is a Baptist and argues a great deal, while most of his prospective customers belong to some other denomination.

Prof. Sap Spradlen, the Wild Onion school teacher, went hunting Tuesday of this week. He has got the children to believing that he has eyes in the back of his head and sees every move they make, but he cannot convince the squirrels of this.

The Hogwallow Improvement Association, which acts in the same capacity as the Board of Trade in other towns, has started a movement to stop the frogs from hollering after nine o'clock at night. Columbus Allsop has been named as a committee of one to see about it.

A book agent passed through several days ago and entered several of the homes of our best friends before it was discovered what he was up to. He was introducing some of the old books Roosevelt wrote before the public tried to retire him to private life.

Frisby Hancock passed down the road yesterday with a jug and was followed

for some distance by several of his friends. However the jug contained only sorghum molasses.

Ellick Hellwanger went fishing Sunday and cast his luck at a point on Gander Creek near the Hog Ford church. Ellick says unfortunately preaching was going on and the noise scared all the fish away.

Washington Hocks started to mill over on the west fork of Gander creek Monday morning with a turn of corn, but failed to reach there on account of the peculiar action of the mule, which turned off at the first lane it came to, arriving at Bounding Billows late in the evening. Washington was unable to explain why the mule acted so, but finally solved it upon their arrival at Bounding Billows. Then he investigated his sack of corn and found that he had not divided it equally, having more on the west side of the animal than on the east side. This naturally accounted for the leaning of the mule in that direction.

Miss Cordelia Hellwanger, who has been using an umbrella during the wet weather of the past winter, will call it a parasol during the summer.

The Excelsior Fiddling Band called on the Horse Doctor of the Calf Bibs neighborhood a few nights ago and rendered among others that popular air, "The Tune the Old Cow Died On."

Yam Sims has concluded to turn out his mustache and will begin on the job early Monday morning.

Best Thing for a Bilious Attack.

"On account of my confinement in the printing office I have for years been a chronic sufferer from indigestion and liver trouble. A few weeks ago I had an attack that was so severe that I was not able to go to the case for two days. Failing to get any relief from any other treatment, I took three of Chamberlain's Tablets and the next day I felt like a new man," writes H. C. Bailey, Editor Carolina News, Chapin, S. C. Obtainable everywhere.

THE

UNITED STATES CREAM SEPARATOR

Different -
and as much better
as it is different

The United States Cream Separator is different because of its "vertical blade" skimming device, the new construction that departs radically and effectively from any other type. The U S "vertical blade" system is modern, and under latest patents. Other systems are old, with no recent important improvements.

The modern United States system is better because, differing from all others, it divides the milk vertically into thin layers, hundreds of them. Vertical or upright layers are important for, by well known laws, they permit a much easier and more complete extraction of cream. The U S "vertical blades" are still more effective because curved, not only to protect the cream, but that the milk by traveling, farther may receive additional stress

The U S Cream Separator Holds the Worlds Record for Closest Skimming.

The United States construction is different and better because the only one with a feeding device that delivers the milk to outer edge of bowl farthest beyond the cream wall, where centrifugal force is greatest. Milk and cream are kept entirely apart from the instant separation takes place. There are no cross currents that remix and injure the cream.

The United States Construction is different and better because its Skimming blades are open from center to circumference, and because it has no central core, split wings or discs on, or between which cream lodges. In consequence, the United States bowl, differing from others, flushes perfectly.

The United States construction is different and better because it skims Nature's Way, cream to top, skim milk to bottom, and Nature hasn't made a mistake. Consequently the U S is a self draining bowl, with never any sloppy mess over person or floor when taking bowl apart.

The United States Separator is different and better because its skimming device is made of Nickel Silver, which makes for easy cleaning, and does away with rust, thereby meeting the requirements of sanitary laws. Steel discs rust badly, contaminate milk and cream, and are hard to keep clean.

The United States Cream Separator is different and better because mechanically washed. It is the only separator adapted to mechanical washing. This process also sterilizes and dries the bowls. A mechanical washer furnished free with every machine.

The man who best appreciates the United States Cream Separator is the man who has owned and operated another separator, any separator. He has a basis for comparison. Send for our complete new catalogue.
