Youth's Companion Tells of Oregon House at Exposition

The manner in which the Oregon house at the Panama exposition has attracted attention is shown by the following from the Youth's Companion:

One of the most interesting buildings at the San Francisco exposition is that erected by the state of Oregon. It commands admiration for its strength, simplicity and beauty. The wide porticoes that surround the building are supported by 48 columns that are simply mammoth trunks of Douglas fir, from the forests of Oregon. They are from four and one-half to eight feet in diameter. The bark has been left on, and it produces a very attractive effect, which is carried out by the rough surfaced, brown-stained boards of which the building is constructed.

These 48 majestic columns represent the 48 states of the Union, and symbolize, moreover, the sturdy citizenship of Oregon, whose people came from all sections of the United States.

Each of these columns contains enough lumber to build a good sized dwelling house; they weigh from 40,000 to 50,000 pounds.

The flagpole for the building is the tallest in the world, 251 feet high. It was hewn from a tree 347 feet high, and weighs 93,600 pounds. There are more than 30,000 feet of lumber in this giant flagpole. It is more than 300 years old and it cost over \$5000 to transport it and set it in place.

The flag that flies from the pole is 36x49 feet.
