May Settle Railroad Strike

Yesterday President Wilson submitted a plan as a basis upon which the railway employers and employes may settle their differences. He is serving as an arbiter and his position has the effect of making his plan next door to that of compulsion.

All indications point to the successful settlement. The president requires both sides to make concessions and which is always the basis of a successful arbitration.

If the president succeeds, he will save for the railroads, their employes and the American people millions of dollars, losses very much akin to those of war. It will establish a power for the president of the U. S. for the good of all the people, not possible for any other ruler and politically, will be a most potent argument for his re-election.
