If the drift of voters to Cox had commenced one week sooner it would put everybody to guessing as to what will be the verdict next week. It Needed Attention.

He had been sent to a certain suburb to tune a piano. He found the instrument in good condition, and not in the least need of attention.

A few days later his employer received a letter from the owner of the piano, a lady of would-be musical proclivities, stating that the piano had not been properly tuned, it was no better than before.

After receiving a reprimand from his employer, the hapless tuner made another trip and again tested every note, only to find as previously, no fault with the instrument. This time he told the lady so.

"Yes," she said, "It does seem all right, doesn't it, when you play it, but as soon as I begin to sing it gets all out of tune."—London Tit-Bits.

Proper Shade for the Eyes.

While better working conditions can be attained by properly shading and installing the lamp, much can be accomplished by shading the eye. But like lamp shades, eye shades may be good and bad. To the latter class belongs the curved, opaque shade with its edge made conspicuous in the field of view by a dark lining. Such a shade, acting as a distracting object, not only disturbs the adjustment of the eye, but by darkening the upper half of the field of view causes glare, on working surfaces on which there is no glare and increases the glare on surfaces on which glare is already present, medical men assert.
