

Debate Is Saturday

Don't forget the big debate at the Z. C. B. J. hall Saturday afternoon at two o'clock, to which everybody is cordially invited. This no doubt will be worth the time and trouble of coming miles to hear, as we have been going in circles on the tax question and have been unable to find our way out. This may give us some opening and chance for our white ally. Let's go.

Oregon Made Home Knitting Yarns

A great surprise for the home knitters of Oregon, but still a fact. Furthermore, this yarn is absolutely virgin wool yarn; the wool was grown in Linn county, sold by Mr. Senders to the Oregon Worsted Company (mills located at Sellwood), made into worsted yarn by Roy T. Bishop, son of C. P. Bishop, proprietor of the Woolen Mill Store of Salem. Oregon knitters try this yarn out. All colors, 45c per ball of 2 ozs. Samples sent on application. Address: C. P. Bishop, Box 75, Salem, Oregon.

Executrix's Notice

Notice is hereby given that the undersigned has been duly appointed Executrix of the Last Will and Testament of F. H. Pepperling, deceased, by the County Court of Linn County, Oregon, and has qualified. Any and all persons having claims against the estate of said deceased are hereby required to present the same to this Executrix at the office of Victor Oliver, attorney at law, First National Bank Building, Albany, Linn County, Oregon, properly verified with vouchers as required by law within six months from the date of the first publication of this notice. Dated and first published this 20th day of July, 1922.

MARTHA E. PEPPERLING, Executrix
Victor Oliver, Atty. for Exec.

Card of Thanks

We wish to extend our heartfelt thanks to the many friends who rendered kindly aid to us in the sickness, death and burial of our beloved mother, also for the beautiful floral offerings.

Mrs. Vina Brenner
Mrs. Myra Curl
Mrs. J. W. Turner
W. Richardson
T. B. Richardson

We wish to extend our heartfelt thanks to our relatives and friends for the many kindnesses shown us in the death of our beloved father, son and brother, and to those who sang, and for the beautiful floral offerings, especially the Knights of Pythias.

Lee and Max Shelton
Mrs. F. B. Frost
Mrs. G. H. Bilyeu
F. R. Shelton
H. L. Shelton

We wish to express our sincerest thanks to our many friends for the kindness and sympathy and beautiful floral offerings at the death and burial of our beloved husband and father.

Nina E. Myers
Edward Lowell Myers

Mr. and Mrs. C. M. Coffee, of McMinnville, were guests of Mrs. V. A. McKnight Saturday. On Sunday they and Mr. and Mrs. Guy McKnight drove to Eugene. Mr. and Mrs. Coffee returned to McMinnville Monday.

Joe Boyanovsky has greatly improved the scenery south of Scio by a new fence free of brush and weeds. Others take notice.

No Pupils, So School Quits

The school district of Idanha No. 141, on the upper Santiam river, beyond Hoover, has folded its tents, packed its books, rolled its blankets and tramped itself utterly off the map, according to the records of the county superintendent's office. The last of the district money has been turned in to the superintendent for safe keeping, the children are understood to have been moved to other educational fields and the little wisdom mill has been turned over to the pack of rats and the moss and the woodpeckers.

The district has the right of rejuvenation without change of boundary for five years; it can come back and even regain its old number, and all the money it has on deposit. Some such returns have been made in the history of Marion county schools, though like prizefighters and athletes of most every kind, they don't usually come back at all.—Statesman.

Funeral Sunday

Funeral services for Sigard Edward Myers, Mountain States Power Company employe, who was electrocuted at Albany last Thursday, were held in Albany at 1:30 o'clock Sunday afternoon. He is survived by a wife and one child.

Mr. Myers was born at Irene, S. D., May 10, 1896, and came to Oregon when he was four years old. Mrs. Myers is a daughter of Mr. and Mrs. Thomas Small, of near Scio.

Interment was at Franklin Butte cemetery, near here.

How to Make and Use It

By A. HYATT VERRILL

VIII. MORE ABOUT AERIALS

If there are several sending stations at various points from your set, it is often a very good plan to run several aerial wires at right angles or radiating as shown in figures 11 and 12, connecting them together and running the lead-in from the point where all join, as shown. Sometimes this principle may be reversed and several lead-ins may be carried from the outer ends of the radiating aerials and joined to form a single lead-in and will bring even better results, figures 13 and 14. These several lead-ins may be connected by means of an anchoring, figure 15, to equalize the waves or currents, or they may be provided with multiple point switches as shown in Figs. 13 and 14. This switch arrangement has the great advantage that you can largely cut out stations you do not wish to hear by using the lead-in towards the station you desire to hear. This will result in the others being fainter or weaker in comparison and they can therefore be more effectively

telegraphic spark signals from some station and yet, merely by altering the direction of their aerial or the position of the lead-in they could hear everything perfectly. So you see a great deal may depend upon the simple aerial, even if it consists of only a single wire. On the other hand, many amateurs have obtained splendid results with a wire run around the walls of a room near the ceiling; a wire run through a hallway; a wire dropped down an air-shaft or elevator-shaft, or even from an iron bedstead or bed-spring. It all depends so much upon local and climatic conditions, surroundings and other conditions that no hard and fast rules can be made, but despite all this, nine times out of ten, a high aerial, well above surrounding buildings and from 100 to 150 feet long, will give the best results. But remember that if there are elevated tracks, steel bridges, trolley lines, electric wires or steel structures near, you should run your aerial at right angles to them in order to avoid failure through leakage or induction.

You must also bear in mind that the "ground" is almost as important as the aerial, for without a good ground the set will not work. A water, steam, or gas pipe will usually make an excellent ground, but before using it be sure there is no insulated joint between the connection of your wires and the earth or that the pipe does not enter an earthen or tile pipe near the ground or in the cellar. In making the ground connection, scrape the pipe clean and bright and solder the wire to it. If this is not possible, wind the

shelly tuned out by your instruments.

Aerials are most peculiar affairs and a little experimenting will enable you to determine the best size, height and type to use. It is well known that wireless waves are directive, or in other words, that they travel more strongly in one direction away from the sending aerial than in others and while this has been largely obviated in up-to-date stations, yet the ordinary receiving aerial is directive and will get stronger signals if the lead-in is towards the sending station, or is pointed, towards it, so to speak. I know of several cases where amateurs failed utterly to hear voices, music, or even

connection with tin-foil and fine wire and wrap it with adhesive tape. Where no pipe is available carry the ground wire to a sheet of copper, an old copper boiler or a copper tank or basin filled with charcoal and buried at least five feet under the surface of the earth. A lightning rod or fire escape will sometimes make a very good ground. But it is not so much what you use for a ground as how good the connections are and how well the object is grounded. Do not use an electric light or telephone, telegraph or door bell wire for a ground. To repeat, be careful of your connections and sure of your grounding.

TELL your dealer you want to see a Fisk Tire beside any other he offers you. He has it in stock or can get it. See for yourself what the Fisk Tire has to offer in extra size and strength, how its resiliency compares when you flex the tire under your hand, how the depth of the non-skid tread looks beside other treads. This is the way to buy tires!

There's a Fisk Tire of extra value in every size, for car, truck or speed wagon
