

Gov. Pierce at Lacombe

A picnic will be held in the grove at the Baptist church near Lacombe on Saturday, July 11. Everybody is invited to bring their dinner, get free ice cream

served by the Farmer's Union at noon, and enjoy the program which begins at one o'clock. Gov. Pierce is to speak on the tax question and Senator Sam Garland on the Dennis bill. Mr. Parmenter, master of the State Grange,

is also expected to be present and speak.

Baptist Church Notes

Sunday school at 10 o'clock every Sunday morning. Everybody is invited to attend.

Christian Endeavor every Sunday evening at 7:00.

Prayer meeting every Saturday night at 8:00.

Mr. Fred Waehlte will preach next Sunday.

Use Electric Shocks for Regulating Hearts

One of the most remarkable of recent medical inventions is the static wave device.

Its purpose is to regulate the beating of the heart, should it be too fast or too slow. The patient sits in an insulated chair connected with a machine which passes an electric current through the body.

Outside the machine is a revolving ball, fixed to the end of a metal rod. Every time this ball passes another stationary ball, electricity is discharged from the body, causing the muscles to relax.

If the heart should be beating 74 times a minute, but is six beats fast, says the Detroit News, the revolving ball is timed to go around at 74 revolutions a minute and the heart is thus slowed down to its correct time. In the same way, the heart can be quickened.

This wonderful machine was exhibited at a recent medical exhibition in London. The force of the current is such that a person putting his hand within six inches of the chair receives a powerful shock.

Turned From Smithy to Watch Designing

The first Swiss watch was made by a blacksmith. In 1680 a distinguished Englishman was traveling through Switzerland when his watch failed him and the nearest approach he could find to a watchmaker was a young blacksmith, Daniel Jean Richard. This young man undertook to repair the watch, which he did successfully. He profited so greatly by this experience in the knowledge he acquired of the design and construction of watches that he became the first watchmaker of the country and the pioneer of a great industry. According to a Swiss watchmaker visiting this country, the district of Neuchatel produces more watches than any similar locality in the world.

THINGS UNUSUAL

By T. T. MAXEY

THE YERKES OBSERVATORY

To avoid the fine and numerous particles of dust and smoke which naturally hover in the air over a big city and cut down the effectiveness of the observations, the Jarring—even though minute—which upsets the calculations of the observers, and the disturbing reflections from the night illumination, powerful telescopes are usually stationed at points where these conditions do not have to be reckoned with.

Accordingly, the great Yerkes observatory (connected with the University of Chicago)—one of the greatest of all the astronomical laboratories on earth, is perched upon the crest of a bluff above beautiful Lake Geneva, near the town of Williams Bay, Wis.—about seventy miles northwest of Chicago.

In the largest of the three domes which surmount the observatory is mounted the world's largest refracting telescope. It is also the busiest telescope, being in use both day and night the year round, weather conditions permitting.

In the center of this dome, which is 75-feet in diameter on the inside, balanced across the great pier which rests upon a solid foundation of concrete and supports the weight, is the barrel of this tremendous instrument. It is 62 feet long and weighs about 12,000 pounds. Each of the two great lenses which fit inside of this barrel are forty inches across.

The barrel of this instrument can be swung around in any direction and raised or lowered to any angle; the floor of the dome is movable and the entire roof of the dome revolves—all to the end that the observer can observe in any direction and at any angle necessary in order to properly perform the particular job in hand. After the barrel has been focused it can be adjusted to follow and keep in view the object under observation, relieving the observer of having to stop occasionally and focus his telescope. Adjustment as small as one-one-hundredth of an inch can be made.

With this telescope observers have been enabled to determine, with great exactness, the positions of stars in clusters and the distances between them. Stellar photographs taken, using the telescope as a camera, are among the best yet secured. The brightness of stars also is measurable with this instrument.

HOW TO SAVE MONEY WHEN SHOPPING

By MRS. HARLAND H. ALLEN

ON LOSING THINGS WHEN SHOPPING

Does it seem sometimes that you have an almost constitutional weakness for losing some of your belongings when you shop? This is a real misfortune, for not only does such a habit represent a real economic loss, and so has a direct bearing on the family finances, but often the articles themselves have a sentimental value for which money cannot compensate.

Whatever the cause of the trouble, whether carelessness, fatigue, or lack of pockets, you can do much to lessen the likelihood of these losses occurring.

The manager of the lost and found department of a big store says that only a few of the many articles picked up in the store every day are marked. Consequently the office can do nothing toward returning them.

Pocketbooks and bags, of course, should always be marked plainly with the owner's name and address inside—a piece of tape sewed in, or a small key tag fastened securely to the lining. An easy way, but not so dependable, is to carry one of your cards in your purse.

It is always difficult to keep track of several packages of different size. The simplest thing to do is to ask the clerk to tie them all together securely whenever you add a new package to your collection. Another plan is to write your name and address on every bundle as soon as you receive it.

Then there is the difficulty of carrying a number of bundles at once. For this one of the many kinds of shopping bags is indispensable. When you go into a rest room, keep a watchful eye on your purchases. And never take off your rings in a public wash-room to wash your hands.

Furs should never be tucked carelessly under the arm, nor laid on the counter while examining a purchase. They should be worn with a strong

cord that will permit of opening wide for comfort while in a warm store. Always make sure you have closed your bag or purse securely. To walk about in a throng of shoppers with your purse half open on your wrist, is simply to invite pickpockets.

And finally, a wise shopper will make a list of her errands, check them off as they are accomplished, and carefully count her bundles and her change after each purchase.

Of Course.

She (with newspaper)—Here's another musical comedy girl married a young fellow who was just left a fortune.

He—I suppose those stingers naturally find it easy to pick up an heir.—Boston Transcript.

Relic of Feudal Days

The old Norman tower of Holy Trinity church, at Richmond, in Yorkshire, England, dates back to the eleventh century. It is one of the few, if not the only church where the old custom of ringing the curfew still survives. The tower contains two bells. For centuries the larger bell has been rung every day at six o'clock in the morning and again at curfew hour—eight o'clock in the evening. The smaller bell is rung at eleven o'clock on Strove Tuesday morning to bid the housewives tend the fires and cook the pancakes well. Another quaint survival at this church is the practice of ringing the "gathering bell" on the occasion of a funeral to give the mourners an hour's notice to prepare. Unless speedy restoration work is undertaken this ancient tower is said to be doomed.—Family Herald.

Want to Make Money

If you are a Thresherman, or want to be,

Here's Your Chance

The following equipment, all in A1 condition, is for sale at less than half its original cost, and has been in use only four seasons and was never abused. The price is \$1,250.00 for all, \$350 cash, balance approved note. Somebody will get it, so hurry. If sold separately, all must be cash in hand. Here's the equipment:

- 1 Case Threshing Machine, 22 inch cylinder, 36 inch riddle, run four seasons, good condition.
- 1 Fordson Tractor, good condition.
- 1 2-gang 14 inch plow.
- 1 Double Disc, for tractor or horse power.
- 1 4-section Harrow.
- 1 Wood Saw, mounted.
- 1 Kelly Duplex Mill (2 ton feed grinder) new burrs.

To see this property, call at T. M. Russell's after 5 p. m. week days, if you must see it during the day, phone Mr. Russell for appointment. This equipment has been used just enough to make it work better than new.

T. M. Russell, agent, route 2, Scio, Oregon or inquire at the Scio Tribune office.
