OF INTEREST TO FARMERS.

The Dairy.

FORFEFURE BILL.

In New York city, low grades of butter, say from eleven to twelve cents, are in demand for export to the continent of Europe. There seems to be less of this poor butter made than foremembered that at the emembered that at the consumption and help to absorb the present liberal production of the various dairying countries.

rations as subsidies giv- Milk cannot be made from nothing. Sintes government to If the material for its manufacture be s: The Willamette body, and if no surplus flesh has been egon Central wayon egon Central wayon accumulated the secretion of milk will either cease or the materials be drawn from the muscles and tissues which are otherwise needed for the maintenance otherwise needed for the maintenance

Villamette Valley & Cascade, Grass and green crops are succulent and digestible, but they contain a large quantity of water and are deficient in the fat and proteine, or albuminoid matter, needed for the most profitable product of a dairy. Therefore the dairy and proceeded to survey the was completed, or pur-tity to be used, and the kinds of these e been completed, from points viz: The Dalles, sugene City, to the east-

time to found a rule upon. Acid is the most treacherous and effective agent of change in milk, cream and butter. It should be watched for and duter. It should be watched for at very turn and neutralized by every possible means. The addition to the companies certificates such they were to secure the anix. Legislative acts were sed enabling the companies to take less condition; but to avoid the presence of this acid the food and every utensil used in the stable, feeding process, and in the care of the milk should by the several companies, and be kept most rigidly free from acidity

From east of the Cascade as various complaints went to temperature is raised again. This is a well known characteristic of milk and well known characteristic of milk and all other nitrogenous bodies. Meat that is kept for a time in a refrigerator will very quickly spoil when taken out, and milk has the same peculiarity. It is supposed that the cold breaks up the atoms of milk sugar, which change to lactic acid by a rearrangement of the atoms without any fermentation. Milk should be cooled moderately and not lower than 50 or 55 degrees.

Russian dairy products have made
