

LOG CABIN SUCCESS.

What ails the young men? Robert Garrett's father left him a fortune of twenty millions. He was from childhood reared in luxury; he received a splendid education with an especial training into a thorough knowledge of railroad management and was expected to succeed his father as a railroad king.

Within three years after the responsibility which his father's death threw upon him were assumed, he is reported a broken down man, with mind and health permanently shattered.

George Law is another young man left with millions of money, who, as reported, is a dissipated wreck. His father, bred a stone mason, was of gigantic size and strength, with commensurate brain power, so he became a great contractor, then a railroad king and left half a dozen millions for his son to dissipate.

The founders of both of these great estates were born in the most humble walks of life, grew strong, mentally and physically, by simple living and honest labor and developed into financial giants. Their sons were reared in the lap of luxury and developed into intellectual pigmies.

The great men of our country have not, as a rule, come from the elegant mansions of the cities, but from the Log Cabins of the rural districts. Simple ways of living, freedom from dissipation and distracting pleasures, simple remedies for disease, effective and which leave no poison in the system, develop brawny, brainy men, who compel the world to recognize their strength and power.

The wholesome, old-fashioned Log Cabin remedies are the safest and surest for family use. Our grandmothers knew how to prepare the teas and syrups of roots, herbs and balsams by natural methods and leave no after ill effects. The most potent of the old-time remedies, after long and searching investigation, secured by H. H. Warner of safe cure fame, and are now put out for the "healing of the nations" in the Warner's Log Cabin remedies.

Regulate the regulator with Warner's Log Cabin sarsaparilla and with pure blood giving health, strength, mental and bodily vigor, you may hope to cope successfully with the most gigantic financial problems of the age, without wrecking health and manhood.

GIRLS IN DURANCE.

A Brazilian Custom Which Would Find No Favor in This Country.

The typical American girl has often been censured for too great freedom of movement. People who have been to Brazil have declared that the social freedom enjoyed by her has detracted from her modesty of mien. If she is forward, however, she may point to her South American sisters as examples of an opposite mode of culture. A traveler in Brazil was one day entertained by a middle-aged couple, who led the conversation to marriage.

The lady asked the guest were possessed of a wife. When he replied in the negative, she enlarged upon the delights of married life, saying, at the same time, that she had five unmarried daughters. This was a broad hint, which the visitor could scarcely ignore altogether. He therefore expressed a polite wish to make the acquaintance of the damsels. The wife looked inquiringly at her husband, and he presently rose, unlocked a door, and disappeared within a dark chamber. He returned almost immediately, however, saying: "The girls are not accustomed to seeing strangers, and are afraid."

The hostess thereupon disappeared within the room, whence sounds of whispers and giggling presently issued. When she returned she led a modest-looking girl of eighteen or nineteen years, and was followed by three others, all of whom seemed to be overwhelmed with intense shyness and a hysterical desire to laugh. After a formal introduction they were hustled away, and the key was once more turned upon them.

"Why do you look them in?" asked the guest.

"It is the custom of our country," returned his host. "I have never thought of bringing up my daughters in any other way."

"But do they never go out?"

"No, never," he replied. "They learned to ride when they were children, but since then they have been shut up in the house, where they will remain until husbands have been obtained for them."

Don't the daughters of a more northern latitude might object so forcibly to such incarceration that it could never become a custom.—*Youth's Companion.*

A Glasgow inventor forms a convenient fuel by mixing coal dust with a paste of water, ground-iron waste and silicate of soda, and then molding into blocks.

That study of the Bible which is accompanied with a devout and profound sense of its supreme authority as the Word of God, is the study which makes the Book divine, a blessing and a comfort to the soul. No other attitude of mind befits the Book, and no other will bring to the soul this blessing and comfort.—*N. Y. Independent.*

An excellent clergyman, possessing such knowledge of human nature, instructed his large family of daughters in the ordinary practice of music. They were all observed to be amiable and happy. A friend inquired if there was any secret in his mode of education. He replied: "When any thing disturbs their tempers I say to them 'Sing'; and if I hear them speaking against any person I call them to me; and if they sing away all causes of discontent and every disposition to scandal."

Such a use of this accomplishment might seem to fit a family for the company of angels; young voices around the domestic altar, breathing sacred music at morning and evening devotion, are a sweet and touching accompaniment.—*Mrs. Sigourney.*

In any case of seminal weakness, arising from any cause, DuRoi's Life Essence is a sure cure. It acts quickly and is a family cure. Two or three bottles have been often sufficient to cure even cases of long standing. Price, \$1.00 a bottle. All druggists.

INDIGESTION OR DYSPEPSIA. In the inability of the stomach to dissolve the nutritive element of the food, the food causes an irritation, producing pain and distress, and if unchecked, leading to constipation and piles. It requires usually but slight treatment to effect a perfect cure.

HAMBURG FIGS Are mild in action, assisting nature and never failing to effect a complete cure of very bad cases of dyspepsia, as the figs at once cleanse the stomach and intestine to secret fluids which are normal in character. Hamburg figs are sold at 25 cents a box everywhere. Do not miss a fig.

ORCHID-HUNTING TOURS.

Excursions Which Cost Considerable Money and Require Great Patience. Tulips are of easy cultivation. They are multiplied without trouble, and are of rapid growth. Orchids, on the other hand, are of exceedingly slow growth; they are obtained only at the expense of money and trouble, frequently attended by danger and even loss of life, and are by no means easy to grow. Many remarkable stories might be told of the adventures of seekers after orchids. They require the most arduous travel, the most careful seeking, and the greatest care in transport. Orchids are indigenous to most of the tropics, and a thing which they need quite as much, if not, indeed, more than heat, is water. Given a tropical climate, a swampy valley, well protected from the night winds and sheltered from the direct rays of the sun. Then you will be most likely to find your orchid.

It must not, however, be imagined that all orchids grow together. Their habits are as different as their colors, and while some species are found only in the East, others are found only in the West until they are hunted out, gathered and transported with the greatest care by the assiduous collector, to ultimately reach some glass-house within the bounds of civilization. A class of orchids have in their wild state a great horror of man. As settlements advance, so the orchids retire, until their hunting-grounds get smaller and smaller and ultimately disappear altogether.

Orchids flourish in well-kept every part of the tropical world. The countries which are especially affected by the orchid are Brazil, Guatemala, Colombia, Mexico, Borneo, Java, Assam and Rangoon. Colombia probably yields more spoil to the orchid hunter than all the rest put together, but the most prolific districts have been pretty well explored now, and attention is being turned to the interior of the islands in the Straits settlements and Borneo. To equip an orchid-hunting expedition costs no trifle. A skilled botanist to take the command is a sine qua non. He must be accompanied by at least one practical assistant, and supplied with means for protecting and picking the plants when found. The traveling expenses to the farthest to be explored are a fraction of the cost of the expedition. Arrived in Mexico or Assam, as the case may be, a small regiment of men and boys, horses and donkeys has to be hired to convey the party and to carry back the orchids. The expedition is frequently gone six months or more, and sometimes returns with a handful of orchids of good find is reached and a burden of several thousand roots is safely conveyed to the coast, the trouble is but half over. Many cases are on record where the botanist, after having seen his precious treasures carefully stowed away on board the steamer, mused contentedly over his success on the way, only to find on his return that the orchids had been sold for a trifle.

The lady asked the guest were possessed of a wife. When he replied in the negative, she enlarged upon the delights of married life, saying, at the same time, that she had five unmarried daughters. This was a broad hint, which the visitor could scarcely ignore altogether. He therefore expressed a polite wish to make the acquaintance of the damsels. WONDERFUL BLIND MAN.

He Works the Type-Writer and Keeps an Intricate Set of Books.

A most remarkable blind man has been brought to public notice by his proposed founding of an institution for the instruction of the sightless people in this city. His name is Alden F. Hayes, and he lives at Sewickley, one of the fashionable suburbs of Pittsburgh. His father was the brilliant George Alexander Hayes, who was killed at the Battle of the Wilderness, and for whose widow a pension bill of the same name as Mrs. General John A. Logan's is now pending in Congress. Their blind son Alden is now about thirty-five years of age, and he carries on an extensive business as coal merchant. He attends to all the details himself without a particle of clerical assistance. He is totally blind, yet he writes, books, walks to and from his home without company, and in fact goes anywhere in Sewickley by himself and without a cane.

He is an accomplished musician. For eighteen years past he has been organist in the Leedsdale Presbyterian Church and he still takes every Friday afternoon away from his business to rehearse music for his church on Sabbath. He plays the piano with more versatility than the organ, and has handled the clarinet and other instruments for the Sewickley brass band frequently. Mr. Hayes' musical methods are entirely different from those of the celebrated "Blind Tom." The latter learns by air. Mr. Hayes does not, although he has a fine ear for music.

His technique was pronounced by critics faultless. For ten years he taught music, and only gave up the profession when commercial business pressed him too hard. He plays selections from all the masters—Mozart, Beethoven and Mendelssohn. He could, it is said, after ordinary rehearsal, lead down at the grand organ of any of the city churches, and without hesitation perform as well as the regular organist. In learning or rehearsing selections, the music, time and expression must be read to him by an assistant. He listens to a line at a time, then plays it off. It seldom needs to be read to him a second time.

The blind coal dealer does all his own correspondence, using the type-writer. He is so expert with this machine that few professional type-writer operatives can pass him in speed. His fingering is different from that of most writers. It is by the systematic use of eight fingers that he knows the exact position of every letter's key. Writers who see use only two, four or six fingers. He fits his paper, postal cards, envelopes, etc., to the machine perfectly, the lining being beautiful.—*Pittsburgh (Pa.) Letter.*

WINTER DAIRYING.

Preparations Necessary to Change From the Old to the New System.

The present is the time to begin preparations for making butter in winter. The first requisite is that the cows shall come in during the months of September and October, and calculations must be made accordingly. The advantages of changing from the old system of summer dairying to winter dairying are so great that many of the most intelligent and progressive dairy farmers have adopted the latter method. They thus escape the daily and exacting labor of the dairy during the busy summer months, when the general operations of the farm demand the most attention. The cows go dry during the sultry days of mid-summer, when the pastures are the most parched and dry. There is no butter to be kept over through the hot season, when keeping it in good order is the most difficult and prices are the lowest. These and other advantages are greatly in favor of winter dairying, which has been made practicable by the modern improvements in milking, setting, preserving, feeding in silos, and other matters, etc. With this, as with other important changes, it is the first step which costs.

The first step, as indicated above, is to hold the cows back so they will come in during September of next year. In the vicinity of a butter factory it is desirable that the majority of the cows should be dry at the time of change, that the factory may be kept running through the winter. Those who already have cows which will come in next fall, or can buy them, must see that good shelter is provided, with plenty of ensilage, means for taking the chill from the drinking water, and a good object to the system as "unnatural" for the cows. The dairy cow, as we have her to-day, is an artificial product any how, which has been brought to her present state of development by a long course of breeding and care. It is only a step forward in the same direction to change her season of greatest milk flow from summer to winter.—*American Agriculturist.*

Among the ways which men employ to sustain their respectability, none is more common than an exhibition of their social connections. One whose cousin is a Governor, whose father is a general, whose brother has been to Congress, need not stand well in society. Reputation is of the nature of a vine, and our reputable relatives are so much brush or trellis on which we run up.—*Becher.*

There is a wide gulf between youth and ripe old age, hence the proverb, "You can't put an old head on young shoulders." This proverb was written by an old man, youth had nothing to do with it. Youth don't believe the old man knows anything, and the old man expects continually that the young man will be along saying, "I didn't know it was loaded." But young America doesn't want to be told that it is loaded; he prefers to find it out himself. He gets there, and says the proverb generally.—*Boston Globe and Tribune.*

She Knew Him Well.

Miss Clara (blushing)—Do you know, Ethel, that young Mr. Sampson proposed to me last night, and I accepted him?

Miss Ethel (heartily)—I congratulate you sincerely, Clara. Mr. Sampson is a noble young man.

Miss Clara—Do you know him very well?

Miss Ethel—Oh, yes. It was only a few months ago that I promised to be a sister to him.—*Time.*

EXCITING SPORT.

Description of a Regulation Hunt Near In Lapland.

A peasant generally goes out in search of a bear's trail, and, having found it, moves in a ring some miles in circumference, to make sure of having him within it. He then gradually corners his circles, all he comes to the retreat itself of the animal. Week after week sometimes expended in this search; the peasant is then summoned to skulk by the Landsholding, or Governor of the province, and put under the direction of the jomastore, or ranger of the district, who marshals them, and commands their movements. The peasant is generally armed with a close, and come armed with whatever weapons they can procure. Though opposed singly to a whole host, the bear often spreads havoc among his assailants. Every ball that enters his huge carcass but adds fire to his fury, and woe to the individual whom his wrath has singled out. It comes to be a more deadly and exciting sport, the greatest self-possession can save him from a miserable death.

While at Harnosand I saw a representation of an event that took place at a skull in the neighborhood, in 1831, and which shows that bear-hunting must be quite equal to tiger-hunting in excitement and peril. The occasion was a great party, nothing like an American bear, but an enormous beast able to carry off a pony under his arm. His temper, probably never very good, had been ruffled by ten shots lodged in different parts of his body; all present intrenched themselves and waited for the bear to make his move. At this moment a man, holder than his companions, advancing before them, the bear rushed upon him, tore the gun from his hands, and began to wound him with his tremendous claws.

The wretched man was unable to contend with the bear, and he was ready his wounds were letting out his life, when a young Norriander, unable to look quietly on, rushed to his assistance. Besides the danger which he himself incurred, and which, of course, he had no feeling of, there was some difficulty in shooting the bear without striking the man. As he advanced, the bear rose on his hind legs to meet his own opponent; his victim dropped before him; the Norriander seized the favorable opportunity, raised his gun with both arms high above his head, to bring it in a horizontal position on a level with the bear's, and, trusting to feeling more than sight, discharged his piece. An instant's thought would have alone saved either from their enemy.

The success which the brave man deserved attended him, and the ball passed through the brain of the bear, which fell dead on the wounded man.—*N. Y. Ledger.*

THE PAPER TRADE.

Recent Discoveries Which Bid Fair to Revolutionize It.

"We now make about every thing, from a shirt to a car wheel out of paper, but we are also making paper out of nearly every thing," said a Yankee manufacturer. "The most recent invention in our trade—and it is one which bids fair to revolutionize it altogether—is the process of making paper out of cotton. It was recently discovered by a gentleman from Georgia, who has thus opened up another great industry to the South, for the hitherto almost unused cotton seed, considered utterly worthless—a mere waste, in fact—now found to be the most valuable for the making of paper pulp."

"The discoverer, after much study, came to the conclusion that the hulls could be made into paper pulp. An analysis of the hulls showed that they were composed of nine layers, the two upper ones being black and coarse, while the remaining seven are of very fine fibre, and after being subjected to a certain chemical process can be bleached a fine white. About five hundred pounds of these hulls were sent to a paper mill for experiment, and the result was the product of the finest textile pulp that the chemist had ever seen. While the paper woven from the pulp makes a much better and smoother article than ordinary 'news print,' as well as a good quality of writing paper."

"Can paper be made cheaper from this pulp than by the old process?"

"The time and cost of reducing the hulls to pulp is only 50 per cent. of what the present process requires, thus the price of paper will be reduced about one-half, while the quality will be much better. Perhaps I can illustrate the exact difference in this way: To reduce paper pulp to pulp it requires 12 deg. of baume liquid, with 120 pounds of steam pressure, and the cotton seed hulls would require only 10 deg. of baume liquid, and 100 pounds of steam pressure."

"In addition, the cotton stalks can be used as well for the manufacture of pulp and by the process stated above can be made to produce a good class of paper."—*N. Y. Telegram.*

"The beginning of hardship is like the first taste of bitter food; it seems for a moment unbearable, yet if there is nothing else to satisfy our hunger, we take another bite, and find it possible to eat without paying the least regard to them; too often it is only when they are written in our very life's blood that we heed them at all, and then it is too late. The anxious man of business, the fretting, over-solicitous mother, the worrying housekeeper, each in his or her way is laying up a debt against vitality, and becoming involved in a very serious contest with nervous force, in which they are sure to come off worsted; and for what? Often for the most ridiculous causes.—*Democrat.*

—He had invited her to a table d'hôte dinner and was nervous about the claret: "Miss Clara," he said, "do you understand French?" "Not a word," she replied. "Waiter," he said, "impressively, 'for wine you may bring a bottle of the rare old vin ordinaire.'"

There is something cruel in the fate of the Vermont man who spent several weeks in a swamp looking for a mine of plumbago, and who, while so engaged caught the lumbergo.—*N. Y. Tribune.*

WIT AND WISDOM.

—The time a man most needs a vacation is just after he returns from one.

—A deaf man enjoys better health than others. He does not catch everything that is going.—*N. O. Picayune.*

If the human race was evolved from the apes, it is at least his satisfaction of knowing that his ancestors were intelligent; they were educated in the higher branches.

—It never yet happened to any man since the beginning of the world, nor ever will, to have all things according to his desire, or to whom fortune was never opposite or adverse.

—To be forever seeing when your boy is under a temptation, and never discovering when he roasts one, is the surest way to promote the faults and discourage the virtues.—*Lyman Abbott.*

—Good people die and bad people live. The man who is fat with health can't get employment, and the man who is making money hand-over-foot has to give up business on account of ill health.

You find yourself refreshed by the presence of a good pool, but you don't make earnest efforts to confer that pleasure upon others? You will find half the battle gained if you never allow yourself to say anything gloomy.—*Ludwig Maria Child.*

A club has been formed at Marion, O., for the destruction of English sparrows. A premium of ten cents a dozen is paid for shooting them.

PRUDENCE: PRUDENCE In medication, as in aught else, prudence should be our guide. Yet thousands of people have the winds. Every new nostrum finds its way to the medicine chest, and every false remedy has its victims. Every change in the practice of medicine is rung successively for a time at the bells of the credulous, and the credulous, in happy content, of their own advantage, are induced to try the latest nostrum. Stomach bitters, now in its third decade of popularity, approved and recommended by the medical press, and the press of many lands, sought and prized by invalids everywhere. It is a medicine which checks the growth of rheumatism and neuralgia, is a powerful invigorant and useful tonic. It is a perfect and useful medicine. It is a perfect and useful medicine. It is a perfect and useful medicine.

A great Mormon exodus to Mexico is taking place from Utah.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double-headed Eagle of Russia, Star of Chile, Circle of Japan, Harp of Erin.

To get these by a box of the genuine Dr. C. McLaughlin's Catarrh Remedy, Pills, Price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps, and we will then mail you the above list with an elegant package of geographic and chromo-lithographs.

FLEMING BROS., PITTSBURG, PA.

W. M. Dye, of Jessup, Ga., has a hairless cow. He says she sheds off every spring, and takes it cool through the summer.

"That Miss Jones is a nice-looking girl, isn't she?"

"Yes, and she's the belle of the town if it were for nothing."

"What for?"

"She has catarrh so bad it is unpleasant to be near her. She has a bad odor, and she has nothing to help her. I am sorry, for I like her."

"How if she had used Dr. Sage's Catarrh Remedy? There would have been nothing of the kind said, for it will cure catarrh every time."

Imaginary evils soon become real ones by indulging our reflections on them.

A Wonderful Food and Medicine. Known and used by physicians all over the world, this food and medicine is not only a food and strength by virtue of its own nutritive value, but it is also a powerful medicine for all diseases of the stomach, liver, and bowels. It is a food that builds up the wasted body. I have been using Scott's Emulsion for several years, and am now able to do my work as well as ever. It is pleasant and palatable, and all agree to use it in all cases of wasting diseases, and it is a powerful medicine for all diseases of the stomach, liver, and bowels.
