HOME AND FARM.

Stock Feed—The Potato Beetle—How to Destroy Crab Grass—Roots for Feeding—Roadside Trees.

One of the essentials of soiling is a fertile soil.

Every farm ought to have its experimental patch.

A rod of barbed wire, in place of a box, protects trees against horses and small boys.

Thin out all surplus plants in the hotbeds if they are crowded, and those remaining will become more stocky. The hotbed may be left open during the day at this season.

The best food for making hens lay is a pound of lean meat, chopped fine, given three times a week to a flock of twenty hens. But very little grain is required at this season.

Corn Pudding: Two cups of canned corn, one pint of milk, two eggs, salt to taste. Beat the eggs until very light; add the other ingredients; put the mixture in a buttered pudding dish, and bake about forty minutes.

The fall colt can be turned on the pasture, and will cost but little. A mess of oats at night, with hay, is all it requires. Mares intended for spring work should always foal in the fall in order that the colt may be weaned in spring.

Sorrel thrives at this season and crab grass later on. Keep it down at all costs, in order to lessen the number of plants next season. When crab grass appears it is easily destroyed when young. Constant cultivation is the only remedy for both.

If you have any corn fodder the sheep will pick it over and clean the stalks. If the fodder is bright and clean all classes of stock will relish it. If the fodder is run through the cutter and the stalks crushed by the cutter there will be but little waste.

The clover field is the place for the pigs that have been weaned. They will need very little other food. A mess of skimmed milk, or buttermilk, with a small quantity of ground oats at night, will cause the pigs to grow rapidly if they have the run of clover.

The potato beetle will attack the egg-plant in preference to anything else, and unless some plants are carefully watched and the beetles picked off they will destroy the plants in less than a day. To save the plants they should be examined two or three times a day.

When many want to sell is a good time to buy, and when many want to buy is a good time to sell; for many sellers make good prices, followed in due season by small supply and good prices; and many buyers make good prices, followed in due season by large supply and low prices.

There is no color on the horse which is so insensible to the heat as the sorrel. There is seldom any coat so silky or responds so quickly as the sorrel. But more important still, there is seldom any horse with such sound feet and limbs, or possessing the endurance of the sorrel.

Glaced Beef: Set the beef that has been kept from the soup to glaze in a moderate oven for about an hour, taking care to baste the surface once in a while with the broth and some condensed beef bouillon; drain on a dish, take off the fat, strain and reduce the liquid to the consistency of a demi-glace sauce with a little more broth and two ladlefuls of tomato sauce. Put some mashed potatoes on a round platter, set the beef in the middle, pour some of the sauce over, and serve.

Butter or string beans, if cooked and pickled according to these directions, are delicious. Wash them and steam them until they are tender, but not soft; put them into a jar and pour hot vinegar over them; sweeten the vinegar and season highly with cinnamon. Another way equally excellent, but which gives a different flavor to the pickles, is to boil them in salted water until tender; then pour over them the hot vinegar which has been sweetened, and in addition to the cinnamon has a liberal allowance of pepper; cayenne or black may be used.

Every farmer should himself understand grafting, and be able particularly to do it. The art is simple and easily learned. It may not always pay the farmer to do all the large jobs of grafting that he has to do, since his own time may be worth more at something else. But it is the little jobs, the setting of half a dozen grafts not worth sending for a professional grafter to do, that thus are neglected from year to year, simply because no one is at hand to do the work. Professional grafters make good wages setting grafts at so much apiece. Most of them have an assistant who saws off the limb to be grafted, while the grafter fits the scion to the cleft which he makes and covers the wound to exclude air. This and connecting the scion with the outer wood of the branch is all the art there is in grafting.

Trees by Roadside: There is two sides to the roadside question. They are ornamental, but in early spring they often shade the road so as to keep it muddy after places more exposed to sun and air have dried up. Besides, the trees are often in the way of needed road improvements, and it is hard to go around or remove them. Then if grain or root crops are grown in adjoining fields their roots draw their moisture from so long a distance that the crop near the fence is not worth cultivating. A row of trees planted close enough to the line to make a fence of damages a farmer in one crop more than enough to build an excellent fence. So whether trees should this spring be planted along the roadside must be complicated with the further question whether in after years the farmer or his sons can afford the expense of keeping up the ornament.

PORTLAND MARKET.

A SLIGHT ADVANCE IN SUGARS DURING THE WEEK.

Good Crops are Assured—Provisions Remain Steady—The Orange and Strawberry Season Nearly Over—Butter Steady.

The fine weather throughout the Northwest has been all that could be desired, and good crops are assured; the demand for salmon and wool, however, is not very satisfactory to the producer, but hopes are entertained that higher prices will rule later on. A slight advance in sugars is noticeable, while coffees are without change. Provisions remain steady as usual with the single exception of a drop of 1/2c in Armour's. Strawberries are rather scarce and the season for oranges are nearly over. The choicest stocks of dried fruits have been about cleaned up, and the demand for other grades is lessened by the abundant supply of fresh fruits. The local wheat market still remains stagnant, and it is rumored that in some districts the heat has been too intense for the cereals.
