People of That Vicinity All But brasy Over the Strange Discov-ary-How the Mineral la Obtained.

The enthusiasm with which the arch for monazite is now being pres-uted in the Piedmont section of orth and South Carolina is something

search for monazite is now being prescented in the Piedmont section of
North and South Carolina is something
remarkable. Men, wemen and children talk about it, dream about it,
search for it, and would perhaps eat it
if it could be prepared so that it would
be palatable. For two hundred years
tip planters on the coast stumbled over
phosphate rock, which had been
brought to the surface, and considered
it of no value. Finally, says the New
York Son, after the late war, a man of
scientific turn of mind began to investigute this rock, and as a result an industry has sprung up that now amounts
is millions of dollars annually.

In like manner gold miners year
for year in their search for gold
ing the streams of this Piedmont
ation have been finding in their pens
beavy yellowish sand which they
can taside as worthless. This has all
been completely reversed in the last
swenty mouths, and nowadays a prospector will cast aside fair specimens of
pold while prosecuting his search for
menazite. To obtain monazite from the
hundred little streams that are found
in the monazite belt the prospector
cots out provided with shovel and pun.
With his shovel he scoops out a hole in
the bed of the stream or near by it. He
mes through the alluvial deposit until
matrices a whitish sand and gravel.
Of this he takes a panful and washes it
out, carefully examining quality and
quantity. After prospecting in several
different places, he is able to decide
whether the "branch," as these amall
streams are called in the south, is
worth working. If it promises well a
trial is made.
Contractors do most of the mining,
taking leases and paying a royalty of
from one-seventh to one-fifth. Occadenally the monazite professor is bought.

Contractors to most of the mining, taking leases and paying a royalty of from one-seventh to one-fifth. Occasionally the monazite privilege is bought straight out, and in some instances two hundred dollars an acre has been paid. Sometimes, however, the owners work their own lands.

Sometimes, however, the owners work their own lands.

Common, unskilled laborers are employed to do the work. "Strippers" are the hands who clear away the top roll, removing all timber growing thereon. They go down to the sand and gravel. The gravel gang comes is at. They carefully lift out all of the monasite sand and turn it over to the washers, who get out all gravel, silver, and clay, leaving a mixture of heavy material behind. This goes through a second washing, and the material left is marketable monazite.

The washing is done in a wooden trough from twelve to eighteen feet in length, twelve inches wide and twelve cleep. There is a cast from perforated plate at the upper end of the box, through which the monazite drows, while the lighter stuff and clay float away. A stream of water flows through the box. Expert washers receive one dollar a day, but there are plenty of men who do this work fairly well, and are anxious to work at sixty-five cents per day. Overseers and time-keepers receive one dollar and a half. This is considered fair wages down south, where there is little demand for day labor now.

The sand is about as current as gold

day labor now.

The sand is about as current as gold The sand is about as current dust, six cents a pound being the aver-age price. It is estimated that a group units The sand is about as current as gold dust, six cents a pound being the average price. It is estimated that a group of well-managed hands will mule twice their daily wages. Letters of inquiry come from all countries seeking information about mountle, and, judging by the number and character of these received by the geological survey from various European countries, the industry and the amount of money brought into this Piedmont section for monaxite this year will hardly amount to less than one hundred thousand dollars. Momaite has been found in small quantities in Russia, Norway, Bohemia, and in gold washings in Brazil and in the mica voins at Quebec, but nowhere has it been found in such enormous quantities as in this belt.

A Gloucester (N. J.) company is the only concern manufacturing monaxite in this country. The value of sand depends upon the rare metal, thorium, which it contains, which is separated from the associated material by very complicated chemical processes, which are kept secret from every one except those who manipulate the operations. It is then used in the manufacture of incandescent gas burners of different forms.

The finding of monaxite is the best

forms.

The finding of monazite is the best thing that has ever occurred for the poorer people of the section in which it is found. Hundreds of day laborers are now feeding their families with the money made in this industry.

AMERICAN PLUCK.

It Was Shown at Its Best After the Fire of 1835.

et 1838.

"The fearful loss did not crush spirits, however, and committees were insmediately appointed to look after the interest of the cliziens," says the Shipping and Commercial List of April 13, recalling the fire which cost New York the twenty-five million dollars in 1838. "One committee was to make application to congress for an extension of credit on duty bonds and for a remission of duties; another to make application to the city and state governments; and another on relief to those injured, and several others for other purposes. The business men were not cast down, Many had lost all they possessed, but were ready to begin again. Within a year a multitude of warehouses and shops had been creeted and the hum of industry was to be noted everywhere. Real estate was high. Many lots when said brought more money without buildings. The duorsmous rents demanded for dry goods stores in Pearl street caused the merchants to leave that thoroughfare and protections."

The neighew. "The neighew won and got the twenty-dollar clock for money with which he could have been give to he allock for money with which he could have been give to have a per lock for money with which he could have been give to have a per lock for money with which he could have been give to have bought the finest clock in The neighew. "The neighew won and got the twenty-dollar clock for money with the hephew. "The neighew won and got the twenty-dollar clock for money with which he could have been give head the instery of the clock was, but it must have had a peculiar one. Then I put have had a valuable association for each one of the family. A married and study had lost all the most, and the bidding, which opened at one of the family. A married doubter and young Anthony Prexel were the ones who wanted it the most, and the bidding, which opened at one of the family. A married and it had a valuable association for each one of the family. A marr

BRAINS AND BREAD.

is Staff of Life as Produced by Hakers is Possessed of Rut Little Sustain-ing Power — A Three-Cent Luncheon.

"With brains, sir," was the celebratd rejoinder of Sir Joshua Reynolds to
se question of an inquisitive and probbly shallow young pointer who asked
aim with what he mixed his colors.

Is brains the ingredient that was
left out of the loaves which were exlibited at the pure food show? asks
flate Field's Washington. Four hundred competing loaves all fell short of
the standard, if it is reported fairly. It
is more generous to believe however,
hat the standard has been raised by
in intelligence which means to educate
the community.

in intelligence which means to educate the community.

In New York a few exclusive bakers advertise "high-class bread" at high-class prices; actually it is not too good. But brains in Boston, joined with brotherly kindness, have produced bread which may challenge any competition and which is sold to the public in tiny oaves, perhaps better called long rolls, at one cent aniese; faultless bread; caves, perhaps better called long rolls, at one cent apiece; faultless bread; weet as the wheat can make it, but not sweeter; light and fine and close; exqualitely balred in the mild, slow heat of a brick oven. This bread, such as the rich seldom taste, comes daily from the New England Kitchen for all who are so fortunate as to be able to send for it. It is the product of the intelligence and philanthropy of a society for the promotion of public health. When the kitchen was organized a few years ago its first six months' working was supervised by Mrs. Mary Abell, who had taken the Lamb prize for an essay upon sanitary and economic cooking. ipon sanitary and economic cooking. This essay, accompanied by recipes and nenus for the poorest wage earners, is among the publications of the Syracuse public health society.

mblie health society.

Proof of the economy and excellence of the cooking of the delightful Boston Ritchen may be made by anyone who shurrying as I once was, to the Providence depot without time for hunch and with ideas above a railway station restaurant. I was provided with a small paper box. I bought one of the little onves I have just described; it nearly niled the box. For another cent it was buttered. What else could I carry? I was offered a slice of spiced pressed meat, such as is made very poorly in ome houses and called veal loaf. But that was not poor, but delicate and avory. It was daintily wrapped in white paraffine paper, all ready to be handled nearly. This was also one sent. Here was a wholesome, delicate and abundant lunch for three cents. I hought of Frankliin, opening his career. and abundant lunch for three centa. I chought of Franklin, opening his career in Philadelphia with his big Dutch penny roll, and like him, I indulged in some philosophizing. One hundred and difty years of what we call "progress" separate us from Franklin. In those years the era of homemade bread, with that of homesoun clothing, has denorted. And still we have no good public bread—only the chaffy and spongy taker's louf, overraised, undermixed, deseiful and dear. Poor men cannot be fed with such bread, and so they wash it down with spirits.

We are a great people and we have the greatest chain of lakes and the highest rivers and the widest wheat-fields on the globe; but we are not able to

gest rivers and the widest wheat-fields on the globe; but we are not able to give the multitude bread until it has been turned into carbonic acid gas for the profit of the balcors.

In feedal days the lord of the manor had the monopoly of the oven; no bread for the peasant but that which was baked in his oven. By the independence and competition of the laborer we have attained the privilege of starving ourselves. Is it not almost time to swing back to the public oven, supervised by back to the public oven, supervised by the best intelligence of the community, and secured against the greed of compotition? There is not wanted free bread to deprave the soul, or sour bread to deprave the atomach, or high-class bread to suit the rich; but honest bread, fit to be called once more the

BIG PRICES FOR FURNITURE.

Anctioneers Talk of the Private Bale of Rich Men's Effects. A party of auctioneers en route from Chicago to Buffalo were in the smokingroom of a Lake Shore alceper the other night telling stories. "Selling horses and farm stuff by auction is all right." and farm stuff by auction is all right,"
said one, "but for genuine fun give me
the private sale of a rich man's furniture. When Anthony Drexel died there
were a lot of things which had personal
reminiscences connected with them
which everyone wanted. It was finally
decided to hold a family auction and
sell them to the highest bidder. The
first thing I put up was a small clock,
worth, I suppose, about twenty dollars.
"Till give five hundred dollars," was
the first bid. It came from a nephew.
"Make it one thousand dollars."

"'Make it one thousand dollars," interjected a younger son.

'Fifteen hundred dollars,' replied

COLONIES FOR THE WEST.

on Arti Western Lands. *

arish Population of the East to Settle on Arish Western Lands.

It has been years since the cry of "Westward, hel" has been heard in the eastern states, and meantime the cities and thriving manufacturing centers east of the Mississippi have been rapidly filling to the point of overcrowding, until labor is a drug on the market. Mining, which attracted as many hundreds of people from the east many years ago, has lost its glamour, hunting and trapping have too many devotees already to encourage more to enter this life to-day, granger life on the western scale requires too much capital and the too-plentiful foreclesure of western farm mortgages has been discouraging to those who may have been considering emigration. All these things have tended to stagnate the population of the cast, and the result is alarming to all concerned, capital and labor alike.

An opportunity has presented itself all the ords.

An opportunity has presented itself at last, through what is known as the at last, through what is known as the Carey law, passed by the Fifty-third congress, by which each of eight west-ern states was granted one million acres of acid land located within their borders on condition that they utilize them for agriculture, through irriga-tion, and prove to the secretary of the interior that their irrigation plans are

Five of the eight states have accepted Five of the eight states have accepted the proposition, and one more is ex-pected to reply favorably before long. The national irrigation congress, a body composed of delegates from twen-ty-three western states, has appointed a national trigution commission, which body is engaged in forming colonies to take up these arid lands and carry them on by irrigation under proper and selen-tific direction. tific direction.

on by irrigation under proper and selentific direction.

Some of the details of the scheme are given in the Roston Transcript. It is the purpose of the commission to form colonial clubs throughout the east, wherever there is a congestion of population, and these clubs will disseminate information concerning the present and future possibilities of the western country. It is not intended to send out separate families, which would certainly become entangled in difficulties, if not properly directed. Whole colonies are to be organized and dispatched to favorable localities, with men competent to teach them the solution of the problem of irrigation and agriculture. These colonists it is proposed to organize on the principles upon which the successful Mormon colonies were carried on. An organization, to be known as the Plymouth colony, is now being formed to take up lands in Idaho. Each member of this colony is to furnish one thousand dollars capital. The land is to be taken in small holdings, and the whole managed on the basis of a cooperative village.

GOOD HEALTH OF HOBOES.

Tramps Generally in Better Condition Than
Any Other Class of People.
Prof. John J. McCook, of Trinity college, in a recent lecture in New Haven
on "The Pathological Aspect of the
Tramp Problem," gave the following
interesting facts about the lenights of
the road:

the road:

"New Jersey was the first state to pass a law punishing the professional tramp and at the same time to define what he was. This was in 1876. Rhode Island was the next, and Connecticut came third. A recent writer asserts that there are about 60,000 tramps in the United States. This number is a trifle large, although it is safe to say that there are over 40,000. This is larger than the army of Wellington at Waterloo. We look on tramps as human wrecks, as driftwood, and yet the majority of them are in the prime of life, and in better than the average health. Only 5½ per cent, of the tramps from whom my statistics were gleaned claimed in the dead of winter, while the grip was raging, that they were in the grip was raging that they were in bad health. They are robust, and will fill you with envy, malice, and all other jealous feelings when you hear them snoring at midnight.

"Eighty-one per cent of tramps de-clare that they took to the road be-cause they were out of a job, and only one man because machinery took his place. Over 60 per cent, of the English-tramps are given as taking the road because of varyon; basits. The materbecause of vagrant nabits. The majority of our tramps are of American birth, 65 per cent. of 1,342 being of American parentage and 273 Irish, who come parentage and 273 Irish, who come next. Over 100 out of 1,738 tramps could read and write, and they all spend money on the daily newspapers. Out of 1,389, only 70 are married, 57 are widowers, and 89 have children. Thirty-eight per cent say they york for their food, 34 per cent beg it, and 56 per cent that they steal it. Over 400 sleep at cheap lodging houses, and nearly 300 in police headquarters. About 100 sleep in boxes."

Whist in a Lion's Den.

In the Hungarian manageries a favorite sensation scene is for four what players to alt down and play a rabbar in the lion's den, while a fifth standa by to see fair play—on the part of the lions. I thought, writes James Payn to be Bussested Lender New Land in the Illustrated London News, I had played whist under all possible circum-stances, and in company with the very strangest specimens of created beings, but this experience is beyond me. Some people are made nervous by folka looking over their head, which (unless they are my adversaries) does not affect me at all, but I don't think I should like this from a lion; the greater attention he paid me the less pleased I should feel by the compliment. I am sere I should be very much put out—were if it were croked by a mistake of my opponents—if he roared. Hungarian players do not even to mistake of my opponents—if he roared. Hungarian players do not even to mistake of my opponents. ers do not seem to mind them. Hings. The other day, however, it appears this very interesting performance was given once too often. The Hone, with delieate forbusance, abunined, it is true, from interfering with the players, but they went for the fifth man, whom they doubles considered superfluors and made very short work of him. In spite of the schishness that is often, though most unjustly, attributed to card play.
