## arge Number of Persons Actively aguged in Bringing Goods Over from Canada Without Pay-ing Duties.

Smuggling is an offense of great an-quity and one that many of the revo-stionary fathers and early settlers of ie country, prior to the historic Boston a party, were wont to commit as fre-cently as the opportunity presented iself, and the excessive duties made it profitable. As late as the latter part of the eighteenth century the snaug-gling of wine, liquor, tobacco and bulof the eighteenth century the sinug-ging of wine, liquor, tobacco and bul-lion was so generally practiced in Great Britain as to become a kind of "national failing," and the smuggler was often regarded as a popular hero. The maximum penalty for bringing into the United States dutiable articles, with letter to defend the recogni-

into the United States dutiable articles, with intent to defraud the revenue, in five thousand dollars fine or two vars' imprisonment, or both, in the incretion of the court, and for aiding and abetting the importation of a Chimman one thousand dollars, or one sar's imprisonment. The degree of unishment an offender gets depends upon the circumstances of the case. The amuggler also forfeith his goods.

There is a large body of men system-

There is a large body of men system-atically engaged in amuggling China-men and opium on the Pacific coast and the Canadian frontier. The men who successfully engage in this business must be peculiarly adapted to it. The first qualification is ingenuity enough to invent ways and means; second, dishonesty to the degree of defrauding the government, yet with sufficient integrity and honor to justify the import-ers in intrusting to their cure hundreds and sometimes thousands of dollars' worth of opium. It is a popular fal-lacy that any man who is dishonest enough and will assume the risk can unke money at smuggling. If he has sufficient capital he can buy opium in canada and possible get it across the burder, but it is practically impossible to sell it without detection. The deal-ers in the United States will not buy it, nor receive it, from anyone save their

According to statistics there are bout one million human beings in the about one minion numan senga it rule.

United States, principally Mongolians,
addicted to the habit of smoking
opium. It is prepared in Hong Kong
by a syadicate under the surveillance
of the Chinese government. Prepared oplum has the appearance of black molasses. It sells in China for about seven dollars per pound, and the duty under the present tariff law is six dol-lars per pound. Formerly the duty was twelve dollars per pound; it was then that the amuggler resped a

The methods of smugglers are too numerous to relate, but suffice it to numerous to relate, but suffice it to say that the government has to main-tain an army of detectives and spotters to suppress them. The detectives who render the most valuable service are those stationed at the places from whence the goods are imported. They speed the parting guest and give the "tip" to the detectives at the object-ive point, who welcome the superior ive point, who welcome the snuggier whenever the opportunity presents itself. Conviction speedily follows, as the United States statutes place the burden of proof on the smuggier to show that the opium was not illegally imported. The Detroit river is one of most favorable points for smuggling on the frontier, but, thanks to the efficiency of Special Agent Wood, one of the cleverst officials in the service, it is practically broken up. The smuggler usually crosses the river in a row boat and drives by conveyance to some small station near Detroit, where he boards the train for New York or Chicago

profitable, but difficult. The Chinama will gladly pay one hundred dollars to be safely landed. Chinamen were for some time successfully imported by bringing them over in the staterooms of sleeping cars; woman's at-tire and black faces have been resorted to, but the pixtall usually discloses the Chinaman's identity, and this he will not part with, owing to the superstitious belief in it as a means to get him into a better world.—Detroit Free Press.

#### CLOSE QUARTERS. The Thrilling Adventure of a Pauthe.

Col. Barras, in "India and Tiger Hanting, says that during a pause in panther hunting, he and his compan-ions were about to take luncheon on the borders of an impenetrable covert when the anisonline is

where the animal lay. He adds: The "tiffin-basket" stood just on the other side of my friend Sandford. ed across him to reach it with my right hand, and had just grasped the handle when a succession of short, the handle when a succession of short, savage roars broke upon our cars, mingled with the wild shouts of the natives, who were evidently being chased by that ferocious brute.

At this time I felt that my hat would probably do more for me than my gon; so I crushed it down on my head, seized the gun and faced the enemy. The panther came at me with lightning bounds.

bounds.

Owing to the beast's tremendous speed, I could see nothing but a shadowy form with two large, round bright eyes fixed upon me with an unmeaning

stare, as it literally flew toward me.

I raised my gun, and fired with all
the care I could exercise at such short notice: but I missed, and the panther bounded light as a feather, with its arms around my shoulders. Thus we stood for a few seconds, and I distinct-ly felt the animal spuffing for my threat

nically I turned my head so as Mechanically I turned my head so as to keep the thick-wadded cape of my belimet in front of the creature's mix-ric; but I could hear and feel plainly the rapid yet cautious efforts it was making to find an opening, so as to tear the pressure that they are connected with some of the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility. Thus it is quite common to find the great heaves of the nobility of the

SMUGGLING THAT PAYS. I mad no weepon but my gun, which was useless while the animal was closly embracing met so I stood perfectly still, well knowing that Sandford would liberate me if it was possible to

do so.

As may be supposed, the panther did not spend much time in investigating the nature of a wadded hat-cover, and before my friend could fire the benst pounced upon my left elbow, taking a piece out, and then buried its long, sharp fangs in the joint till they met. At the same time I was hurled to the earth with such violence that I knew not how I got there, or what had become of ray guin.

not now I got there, or what so come of my gun.

I was lying on the ground with the panther on top of me, and could feel my elbow joint wabbling in and out, as the beast ground its jaws, with a movement imperceptible to the bystanders, but which felt to me as if I were being but which felt to me as if I were being but which felt to me as if I were being the pales all these In a few but which felt to me as if I were being violently shaken all over. In a few seconds the loud and welcome sound of Sandford's rifle struck uponanyeur, and I sat up. I was free, and the panther had gone. He had bounded away, shot through the body, into a thicket, where he was afterward killed by a spear-through

### EAT TOO MUCH MEAT.

Americans Too Prone to the Consumption of Firsh and Fowl.

"We eat altogether too much ment, anyway," said Dr. Cyrus Edison, the health commissioner. "I venture to say that most of the ids we are helr to come from habitual eating of too much seef. If the present era of high prices of beef will only compel people to hoose other foods, such as fish or a reater warries of vegetables, the beef ombine, as it is called, will have been sectors instrument of doing a

ast amount of good.

"Fish is much better food for city
cople than fiesh raised on land. It
coes not contain as great a proportion. those stimulative autrients that do much to produce nervousness, indiction, constinution and the host of endant disorders to the humaso continually called upon to provibe. Wage-workers who carn their wing by physical exertion-farm aborers, showelers, ditch digrers, to-equire solid foods, such as beef and ork, but men and women who take litle exercise, whose employment is se-entary, calling for no continued physicstrain, fish is eminently more satisfactory as a regular diet. Fish is the ming food. Long after our hash has come denuded of those properties nat nourish animal life in the field, the aters of the deep will be teeming with

"The scientific culture of carp has The scientific culture of carp has shown conclusively that one acre of water will produce more edible and wholesome flesh than three acres of land, and some of these days we will awaken to the importance of preserv-ing our land-sustained animals by the systematic and methodical cultivation of our fish.

"As to the quantity of meat that a man really needs people seem to be gnorant. The United States govern-ment allows the residiers but threesarters of a pound of ment a day, ow many New Yorkers, do you sup-use, get along with so small a ration of eat? The government, through its cent? The government, through its bysicians, has learned that soldiers. up on the march, do better on that emingly small allowance than if they were permitted to gorge themselves in-discriminately on the flesh of steers and heep. New York city allows for its licep. New York city allows for its inspital patients but one pound of meat a day, and that pound is untrimmed. When cooked and ready to be eaten that cound represents really less than the army ration for able-bodied men. The variage energetic well-fed New Yorker consumes from one and a half to three pounds of meat every day that he is able to eat. It is allowed by the ready this to eat. It is altogether too much. No wonder that nature reliefs frequently and insists that the min live on gruel for whole days at a time. That is na-ture's own recourse. That's when a man is sick-when he can't eat meat."-

### HYPHENAILY NAMES.

Use of the Lipphon is Lienally a friend of

Sentetes Snobbers.

Hyphenated names in Europe may be divided into two categories—namely those wherein the hyphen is a mere place of anoblory and affectation, and those wherein it is consequent upon a legal obligation. The latter are in the minority and are borne almost in-variably by legatees and their de-scendants, who have inharized proper-ty months. usually real estate, continge their tacking the name of the testator on to their own. Or clse they are men who have married betresses and been accepted as hubands for the latter on the condition that they should append the family name of their wires to their

own patronymic. pple in the other entegory who us the byphen merely with the object of creating the impression that they are of more ancient lineage than is really of more ancient ineage than is really the case invariably prefix, instead of appending the additional name. And it is this that enables one to dis-tinguish the "born-fifte double-barrel." as Lord Randolph Churchill used to call them, from those who are not. For you have only to ask Mr. Ponsonby-Jones for the name of his paternal grandfather in order to find on that the old gentleman was a simple Jones. devoid of the aristocratic Punsenby; whereas in the case of surnames adopted in deference to testamentary dispositions one will invariably find on equiry that the paternal grandfather and ancestors bure the first of the two

The persons who make use of hyphenated names without being com-lled to do so are usually the owners a natronymics excruciatingly plebelan. sho hope, vainly it is true, to redeem the commonplace character of their name by prefixing thereto one cal-minated they trust to create the imBLASTING WITH LIME

Newton Learned a Lesson in an in-diana Stone Quarry. Apropos of the late Gen. Newton's death is a little story he told twenty

death is a little story in told went;
years ago, when his work at Hell Gate
made him a much-talked of man.
"I was in the quarry country of Indiana," he said, "where they take great
blocks of colytic limestone without the
use of a pound of powder. I had heard of the process, and I took a toam at Greensburg and drove down to the quarries to see. The superintendent was a Welshman of unpromising ap-pearance. He was certainly an unedu-cated man, so far as colleges went, but he have the business.

blast such huge blocks of the rock, and how much dynamite was required to the ton. He said he did not use dynamite or any other explosive. He simply used unshaked lime. It astonished me, but before he took me to the quarry he set up a piece of pine board an inch thick against a wall of rock, brought out a revolver and fired at the board. "The bullet passed through, fast tened against the stone and fell to the ground. Then he set up the board again, and, taking the flattened bullethrew it against the board with aston

threw it against the board with astorishing skill, striking it each time in the same place, and after the fifth east the

board was split from top to bottom.
"I didn't use as much force when I threw as when I shot, did I?" he said. But the board would never split along the grain by shooting at it. I could tear that board into pieces shooting, but if I want it to break in long sections on the grain I don't want to use such a sudden force. "That's how I blast with lime."

"And then he took me to the quarry. They had drilled a series of holes in the place he had marked, his judgment the place he had marked, his judgment and trained intelligence telling him where the dividing line should run. Then they tamped these holes full of unsiaked lime, poured water on it, keyed them shut and waited. In twelve hours the mass of rock he wanted would begin with greans and cracklings to separate. In sixteen hours it would be free, and the force of the lime would be spent.

the lime would be spent.

"If I used powder or dynamite,' said he, I would rip out such a mass as that in fifteen minutes, but it would be chipped and cracked into a hundred pieces. Or, more likely, in a large blast the powder would simply tear out a way along the least resistance, shell-ing out a lot of spawls and leaving my big rock as solid as ever.

"I thanked my Welshman," said Gen. Newton, "and told him he was much of a philosopher."

#### A BRIOCHE.

to Enit the Boft Foot cushiens That Were Once Popular.

There seems to be a renewed interest in brioches, the soft foot cushions that were once popular. I urge that they are to enjoy a revival. Hile many other luxuries, and think that renders may be giad of a rule for knitting them which has the merit of being an oft-tried one. The foundation for the footstool is a leather-covered disk of mill-board about nine inches in diameter; to this the knitted stripe is sewed, and stuffed with hair, and pulled down to make a deep depression by taking some stitches through the board bottom with carpet thread and a sailor's needle. A large furniture button or a short cord and tassel fied in a bow is seved over the gathering. The orische, which originally won its name from its resemblance in the shape to the Prench cake of that name, is knitted of double case of this name, is intitled of double repliyr wool in stripes, 16 of them being narrow and is wide, the latter narrow-ing to a point at the center of the cushion. Cast on 40 stitches in black secol and knit seven rows of the narrow stripe; then with an old gold solor knit two stitches and turn, knitting back to the end of the row, continue to knit back and forth with the old gold, taking each time two more stitches of the black until within two stitches of the top. Then knit down and commer again with black, making another nar-row stripe, knitting in the two black stitches at the top in their turn. When the last stripe is finished it should be sewed or knitted to the first stripe. These directions are contributed by a knitter who has had an experience of over sixty-five years, and they ought to be reliable. But I should advise anyone who thinks them complicated to cut a pattern of the wide or gored stripe, making the top like a meion piece, and, in knitting narrow, by taking up two stitches together till the shape correis to be stuffed with down it must be at the highest market prices. made with an interlining of ticking or stout unbleached muslin, else the ing will continually be escaping in fluffy particles.-Harper's Basar.

### MICROBES IN CLOTH.

"Microbia." or the science of mi-robes, is becoming more and more an erobes, is becoming more and more an exact study, and theories which lacked confirmation a few short months ago construction a few short menths ago have now become medical facts. Per-haps, says the New York World, the latest disposery in the renim of barteri-ology is regarding the enormous quan-tity of bacilli that are to be found in cotton and woolen clothes. Herr Selts. a savant and physician of Munich, has recently made a series of careful in-vestigations of hits of cotton and woolen goods and the result of the re-searches, as he gives it out contains from Bach & Buhl. Good suits for information that is startling and low prices.

information that is startling and worthy of eareful attention.

Herr Seitz's experimenting has been done with pieces of cloth about one-eighth of an inch across. In the average bit of woolen goods of this size he discovered nine hundred and fifty-six microbes. The pieces examined were cut from a woolen stocking. In a piece of like size cut from a cotton stocking he found an average viole of

and mad here yet seek a contain your did in that thirty-three microbes were di-covered on the average, all the piece examined having been of the above size. Other experiments quite as in teresting this German physician made with the result of formally establishin, the theory that microbes exist to a greater or less extent in all wearing apparel.
It must not be supposed, however.

Herr Soitz contends, that all the varieties of bacilli found in clothing artificed and of dangerous diseases. Some of them have been proved by seleme to be quite harmless, but the more fac-that microbes can and do crist is that microbes can and do crist in clothers, and grow fruitful and multiply the blast such hure blocks of the rock, and how much dynamite was required to spreading of contagious diseases can be spreading of contagious diseases can be traced much mere easily and precan tions more readily taken. Accepting the fact that nearly all clothing is the seas of some type of bacilli, it is no difficult to see how certain sporadic discases spring up.

One copecially valuable hit of medi-al data has come to light through these experiments, and that is to the effect that the bacilli of typhoid fever can be preserved in wood, under ordinary con-ditions, for twenty-fee days. A vigor-ous application of this knowledge may do much to ward off typhoid fever in ich to ward off typhoid fever in

How to Keep Plates Rot. One of the Intest adaptations of electric heating is the electric "hot plate," for keeping food hot during dinner. The metal plate is electrically dinner. The metal plate is electrically heated before being brought to the table; but should it be necessary to renew the heat a plug is inserted at the side of the plate, connection is made with a socket on the table and the current is kept on as long as needed. A new form of hot plate for the plate is the plate of the plate of the plate is the plate of needed. A new form of not plate diverse that he me has three diaks fitted in a row into a stand, electrical connection being established by a socket under each plate. The stands are nickelplated and the plates are each eight inches in diameter.—N. Y. Sun.

The Arab's foot is proverbial for its high arch. The Koran says that a stream of water can run under the true Arab's foot without touching it. The foot of the Scotch is high and thick; that of the Irish flat and square; the English short and floshy.
