

### Caroline Herschel.

Among distinguished women who have helped to shed light upon astronomic subjects was Caroline Lucretia Herschel, the noted astronomer. She was the daughter of a musician of Hanover. Her early education was designed to lead to a musical career. She accompanied her brother, William—afterward the illustrious Sir William Herschel—to England. Brother and sister soon turned their attention to astronomy, and in 1785 Caroline published a "Catalogue of Stars." Until Sir William died in 1822 she was content for the most part to be known only as his assistant, but later she engaged in many original and independent investigations. She devoted special attention to the discovery of comets, and claimed priority in the discovery of at least five.

"Why, she may have lockjaw," said the medical man.

"Do you think so? Well, if you are up this way some time next week, I wish you would step in and see what you can do for her."—Harper's Magazine.

### War Endings.
