## Farmers Attention

Why not break the force of winter's cold penetrating winds from your house and barns by planting a few rows of

CAROLINA POPLARS BLACK LOCUSTS  
LOMBARDY POPLARS BOX ELDER

on the windward side of your buildings? These are hardy fast growing trees and will in a very few years prove great protectors from winds during both summer and winter. The small expense involved will be many times repaid in the shelter they will give you. Plant your trees about eight feet apart in a double row. Figure out how many you need and let us quote you on your requirements.
