GRANITE BLOCK FOR PAVING

Material Regarded as Particularly Suitable for Trunk Lines Entering Large Cities.

Study of various paving materials suitable for much-traveled highways has disclosed interesting data on granite blocks to the bureau of public roads of the United States department of agriculture. Many road builders are coming to regard this material as particularly suitable for trunk lines entering large towns and cities where there is an increasing amount of heavy traffic.

Though the initial cost of granite block construction is high, the maintenance of the pavement, if properly laid and grouted, is less than that of

The Maintenance Cost of This Kind of Pavement, if Properly Laid, is Less Than That of Almost Any Other Kind of Pavement.

almost any other type of pavement. In Worcester, Mass., over a period of 10 years the average maintenance cost per yard was less than a half cent. This also is true in other cities, regardless of the fact that in general the streets covered with granite block paving are those carrying the most severe traffic.

ROAD TESTS IN CALIFORNIA

Over Adobe Land Concrete Is Laid on Sides With Macadam in Middle—Surface Topped.

An experiment in road construction over adobe land is being made in a section of the county highway between Bay Point and Pittsburg, in California.

Experience has shown that concrete roads built over adobe land results in the cracking and disintegration of the road in a few seasons and in an effort to overcome this trouble County Surveyor Arnold is having the link of the county highway constructed in a manner tried in several eastern states and proved successful.

The concrete is laid in two separate sections, each eight feet wide with a two-foot strip through the center. In this strip is placed oil macadam which is rolled level to the surface of the concrete and the entire surface is faced with a topping.

GOOD ROADS ARE ESSENTIAL

Success of Motor Truck Express Lines Depends Greatly on Character of Highways.

The success of the motor truck express depends to a very large degree on the character of the roads over which the routes run. Bad roads increase the operating costs, and consequently the rates to patrons, beyond the point of economy. Trucks are destructive to roads unless the roads are permanently built. Therefore, the problem of improving and developing the marketing facilities for farmers through the establishment of rural motor express lines is directly connected with the problem of permanent improvement of the highways.

TRUCK IS QUITE EFFICIENT

Cost of Construction and Maintenance is Lowered One-Half by Use of Equipment.

In the construction and maintenance of the earth roads in the rural sections, the most efficient equipment yet found consists of a road grader drawn by a five-ton truck. This equipment will do the common grading work as is usually done on this type of road for about one-half the cost of doing the same work with teams in the old way.

MANURE CARRIER IS USEFUL

Cost of Handling Fertilizer is Materially Reduced—Hauled to Fields Immediately.

The cost of handling manure may be reduced by the use of a carrier and an overhead track. The usual plan is to throw the manure into the carrier; this requires but one handling. The carrier is then dumped into the spreader, which is hauled to the fields and unloaded by the horses. Manure is thus handled but once.

PLENTY SNOW IN GREENHORN RANGE

Geo. Sculler, who is president and general manager of the Mayflower, many in the Greenhorn district, received a letter from that district a few days ago which will probably give you an idea of the snow conditions. The letter states that there is now eight feet of snow at the May-

flower and the traveling in that section is consequently not very good. A peculiarity of the present season is shown by the fact that on February 15 of the present year there was but 2 1/2 feet of snow at the Mayflower while there is eight feet at the present time.

The Mayflower is a very promising gold property in which many Heppner people are interested.
