IMPRESSED BY SHAKEN FIST

Gesture Marks the Fighter and Wins the Plaudits of Audiences, According to This Writer.

Learn to shake your fist when making a speech in public.

It has been said of the American people that they like a man who is a fighter. An elemental spirit of fight is a well-shaken fist. Has the candidate definite views? Has he political? Has he constructive ideas? The matter, He shakes his fist. He is a fighter. Cheer him.

The shaken fist is an emblem of decisive criticism. It is a device to destroy something. Is destructive criticism a good thing? No; unless how to make a thing right is made better than merely saying it is wrong. But it is a tougher job, much tougher. And it affords little opportunity for effective gesture. The mob will not ask you for a constructive program if only, in a big, virile, outdoor way, you convey the impression that you are there to knock something down, and knock it hard. You are a fighter; a fighter of "the people's battles." It is proved by the fact that you are shaking your fist.

The greatest of our great men might have been greater. For example, take Lincoln. He had a splendid fist, the result of hard, manual labor in his youth. Had he chosen to shake it and been photographed, even without movies he would have come down to us of this day as a man of "the virile type," rather than as the patient man of sorrows. He missed many chances. "With malice toward none, with charity for all"—how much more effective might that have been, for instance, had a quippled and sinewy fist eloquently punctuated it! As it was, many good people didn't even applaud him. They thought him weeping. And weak. And begged their heads, saying there wasn't enough of "the fighter" in Lincoln.
