### EASY TO GROW GRASS LAWN

Perfect Greensward May Be Quickly Realized by the Use of Novel English Method.

It is proverbially a slow business getting a good grass lawn in a garden, but a new English idea makes it possible to secure a fine stretch of verdure just as one would buy a curpet at the stores. Grass seed is sown thickly on strong canvas and, when this is thickly covered with growth it is ready for making the lawn.

The site is well prepared, being made perfectly level, and special attention is given to getting the soil so that it is a favorable rooting medium for the little plants. Then the grass mats are put down on sections, these being closely fitted together. As time goes on the roots push down through the canvas and, in this way, establish a permanent lawn. Ultimately the interest try these material will rot. The value of this lies in the fact that an immediate effect can be secured. It is quite easy to have a splendid grass tawn to a situation where, a few hours before there was nothing of the kind. Thenceforward the grass will go on improving and the little plants speedfly take a hold on the soil.-Scientific

Trees Beyond Valuation.

Ten million dollars' damage annually is done to the shade trees and hardy shruhs of the country by shade tree Insects, according to estimates made by the bureau of entomology, United States Department of Agricul-

It is very difficult to estimate the money value of the shade trees and shrubs of the country, but a very conservative estimate would place their value at \$1,000,000,000. These figures were reached after extensive correspondence with the ferestry and other authorities of states and municipalities. A more definite census is aimed at, but the figures are taken as dependable for general purposes. They are based on the value of trees to cities, parks and private property, and have no reference to the bare intrinsoc value of wood or lumber. An old oak tree which, because of its condition is not worth \$2 for lumber, may add \$500 to the value of the city tot on which it is located.

City Has Right Idea.

A campaign to beautify school surroundings has been started by the architectural-engineering department of the public schools. About \$35,000 will be spent this year, it is announced.

A. D. Weeks, director of the department, says that from a landscape standpoint Detroit schools rank poorly comparison with eastern cities though they compare favorably in architecture.

In the past, work of this sort has been largely assumed by the pupils who performed the labor and bore the expense.-Detroit Free Press.

The average housemother cannot run two sets of meals and serve at the same time the needs of the young and the desires of the old.

One may restrict the diet of the elders to conform to the food which should be given the young for the two meals of the day, having dinner at noon, or let the little people have supper by themselves earlier than the evening dinner hour.

Children under five should never be given food not suited to their age and condition. The problem then is to serve meals which will be suitable for the whole family for breakfast and luncheon, and neither unbalanced nor inadequate for either child of adult.

In the feeding of children considers tion must be made in the difference be tween a child and an adult. In com parison of size the child is doing a great deal more work than the adult, out his natural appetite will take care of the amount of food needed to build the body and keep up energy. The child's food, because he has to use more, must be easily digested, more wholesome and be better balanced, or trouble will follow,

The child, fortunately, who has not been pampered, does not need a variety of food to stimulate the appetite, neither sauces nor condiments; "hun-

## Advantages of City Life on Surface; of Country Life Underlying.

By J. W. COVERDALE, American Farm Bureau Federation,

The drift from the farm to the city is not altogether due to the higher wages obtainable in the industrial centers. The city has been advertised beyond all reason. The appeal of the printed word is strong. The desire to get something for nothing, to earn a living without the prescribed sweat of the brow, is characteristic of all of us.

There is no speciacular side to country life. It has to do with the fundamentals. The advantages of city life are on the surface. The advantages of farm life are substantial and underlying.

There are very few real advantages of the city that cannot be brought to the country, but the fundamental advantages of free life in the country can never be transplanted to the city except to a very limited degree. For every advantage of the city there is a corresponding advantage of the country. For every disadvantage of the farm there are innumerable drawbacks to urban existence.
