Speaking Directly
Into the Transmitter

Clearness and distinctness of speech is of course the foundation of a satisfactory telephone conversation.

The transmitter of the telephone is the result of years of study and experimentation by telephone engineers. It is of delicate adjustment and its fullest effectiveness can only be obtained through proper use.

The lips should not be more than an inch from the transmitter, and the voice should be clear, not loud.

Speak directly and distinctly into the mouthpiece. This will mean your satisfaction and that of the person with whom you are talking.
