BIG ACREAGE SEEDED

There is a great saving of seed wheat, estimated at least twenty per cent, and from this decreased seeding more vigorous plants and better stands are secured. It will be recalled that last year on an average we secured a third more wheat from our copper carbonate treated seed even after the rate of seeding was cut down. In some instances very little difference could be ascertained, while in others there was as high as three times the stand where the dry treatment was used. There is very little doubt but that the increase in yield in Morrow and Gilliam counties could be boosted by fifteen or twenty per cent in the average year from dry treated seed. Inasmuch as it makes it possible to seed earlier, using vital seed, therefore getting a better stand. There are something like fifty or sixty sixty tests of dry treated seed in Morrow county, located in practically every community. While the difference would probably not be so noticeable as it would in the ordinary year on account of our favorable conditions for seeding last fall, yet it will pay you to watch these tests. We will keep you informed of the results in the northwest. C. C. CALKINS.

The Telephone Directory. Good telephone service depends vitally upon care in calling telephone numbers. A wrong number called causes loss of time to you, to the party called and to the operator. Every instance means avoidable inconvenience to all concerned. It is not the loss of time to you alone or to the operator that concerns us most, but it is the annoyance to the party called. Your mistake can be explained to him, and the Telephone Company is held responsible for your error. Consulting the current issue of the telephone directory, instead of trusting to memory; giving your number clearly, and quickly correcting the operator if she misunderstands your call, will greatly increase the efficiency of the service. The Pacific Telephone And Telegraph Company.
