CLUB MEMBERS ENTER

AGRICULTURE COLLEGE

The enrollment of Michigan Agri-

cultural ollege this year is 8.4 per

cent former boys' and girls' club

members, according to a recent sur-

vey by the college. The highest pro-

portion is in the freshman class, 10.7

per cent. There are altogether this

year 130 students in this agricultural

college who, having previously learn-

ed in their club work the practice

making which research and experi-

ence have found best, wish to go

further in the study of the science

of agriculture. Club work in Michi-

gan, as in other states, became a

considerable feature of agricultural

extension about 1914, so that any

near Morgan last summer and has failed to solve the mystery Th substance seemed to plate the stee drill bit to resemble gold, Mr. Campbell took a sample of the drillings from the well when he went to Iowa

STILL A PUZZLE

in the fall and submitted them to several tests. One test determined that the substance is not gold and another that it is not fron pyrites while a third test proved that no trace of copper existed. Mr. Campbell now knows several things that the sample is not, but he is still curious to know just what it is.

Mr. Campbell enjoys his work in Iowa and found quite a colony of U of O. people at the U. of I., there being more Oregon men holding positions as instructors at Iowa than from any other school.

#### BETTER DAIRY

## REEDS AT LOW COST

Co-operative bull associations are helping hundredr of farmers to improve the production of their dairy cows at a low cost, according to the United States Department of Agriculture. Last year these associations in the country increased 15 per cent in number, showing that they are making steady progress. In Idaho the number increased from 9 in 1922 to 29 in 1923. Records show that in these associations the bulls have been greatly increasing the production of daughters over their dams. Seventy such daughters whose records have been compiled showed an average increase over their dama of tion.
