

G. A. Cobb

Candidate for Democratic Nomination for
GOVERNOR

I Stand for:

- The abolition of the liquor traffic;
- The abolishing of capital punishment;
- The building of good roads;
- The employment of the worthy idle;
- The reduction of taxes and the partial payment of same;
- Economy in all the departments of our State government;
- The honor system for prisoners;
- The minimum wage law.

COBB MAKES HEAVY GAINS

About April 1st, when G. A. Cobb agreed to make the race for Democratic nomination for

GOVERNOR

a number of others had been in the field for some time practically covering the state, securing the pledges of supporters everywhere.

Newspapers were heralding the name of their choice throughout the State, and it really looked a little hard for a new candidate to break into the field.

But three weeks has brought about a decided change.

Cobb Leads

today with a good safe majority, and is gaining ground fast.

We have not asked a single person to pledge himself to support Mr. Cobb—for that would not be fair. It would be like asking a juror to pledge his verdict before the witnesses had all been heard.

We have no big daily papers to favor us with their columns daily.

We have no interests to favor us except the **COMMON INTEREST** of all the good people of the State of Oregon.

We submit to you herewith Mr. Cobb's platform and principles upon which he is running and

WILL MAKE GOOD.

Think Good, Voters, Before You Ballot on the Verdict.

CAMPAIGN COMMITTEE.

Spring Preparations For Creameries

AS SOON as the ground is free from frost, the yards, the lawns and other parts adjacent to the creamery should be cleared of all rubbish and thoroughly cleaned. If the drive is in poor condition, repairs should be made without delay. Ornamental trees and shrubbery, which add so much to the attractiveness of the creamery, should be set out at this time, and the flower beds put in order. The machinery should be subjected to a thorough overhauling and if new apparatus is required, it should be procured and installed before the arrival of the busy season.

If a new floor is needed, it should be put in at this time. It is also the proper time for painting the walls and ceiling, if it is necessary, and there are few creameries at this season where such treatment would not be beneficial. More time is now available and can be better spared than at any other season for any necessary repair work. In short, spring is the time to give attention to all matters affecting the efficiency of the plant.

Adjust Conditions.

One of the most important things in the management of a creamery is to adjust conditions and methods so that

they are at all times in harmony with the requirements of the prevailing season. An incompetent manager makes no changes, as a rule, until he is compelled to do so by force of circumstances, while an able manager anticipates the seasonal requirements and prepares himself to meet them as soon as they appear.

In the spring of the year there are many things which should be given special attention by the buttermaker and the creamery manager. If the spring cleaning has not been done, it should be attended to without delay, for the busy season will soon be here—the season of long days and hard work when there will be no chance to attend to anything but the regular everyday duties. The surroundings of the creamery should be cleared of all rubbish; drives, flowerbeds, etc., should be put in proper order so that the factory may present a tidy and attractive appearance. In the creamery proper, the walls, the ceiling and the windows generally need washing and the refrigerator requires thorough cleaning.

Hints on Work.

Perhaps the entire building needs painting both inside and outside. The doors, the windows and the receiving

room or intake should be properly screened. If the receiving room is left open, thousands of flies will enter the building through the doors and windows; hence, where the building is so arranged that the intake can not be screened, it should be changed without delay.

As the atmosphere becomes warmer it will generally be necessary to reduce the ripening temperature of the

starter and of the cream, especially during the months of May and June. In most cases the churning temperature can be reduced from four to six degrees from that in use during winter. When the cows have been turned out on pasture the color of the butter will be increased naturally from day to day and the amount of artificial color used should, therefore, be diminished accordingly.

Rheumatism

HA VE YOU ever stopped to think that EVERY PART of your body is dependent on the blood supply; that if the blood is crowded with impurities, "uric acid" and germs of disease, these will be carried to every part of your system and will result in diseases such as Rheumatism, with the resulting inflammation and pain?

To cure Rheumatism, and other ailments, purify the blood. Get the stomach and bowels in good condition to keep the blood normal, then Nature can heal and build. The Rheumatism and other troubles will disappear and the entire system will be benefited.

SULPHURRO is an antiseptic and germicide which enters directly into the blood and is carried to every part of the system, cleansing it of impurities and germs of disease, allaying inflammation and restoring health. **SULPHURRO** is in a class by itself in the treatment of Rheumatism. It GETS RESULTS. Thousands of cures prove its merit.

SULPHURRO can be obtained from our laboratory if your druggist cannot supply you. 50c and \$1, delivered to you.
