ILKING a cow regularly at the age of three and a half years has brought fame to Master George

Foster Beard, lover of dumb animals, and the sturdy little son of Mr. and Mrs. George M. Beard, who reside at Twin Maple Farm, one mile out of Dover, New Hampshire.

When the Beards bought their stock farm 13 years ago there came with the purchase a well-bred Holstein-Durham cow, 9 years old, and giving then 24 quarts of milk a day. Master George, as soon as he could toddle to the cow barn, became greatly attached to Old Dutchie, as she was called, and one afternoon last summer, when the cows came up from pasture, he asked his father if he might milk her.

Cow Takes to Tot.

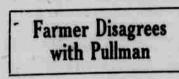

His father, pleased with the prospect of having so young a pupil in the milking art, consented and provided him with a low stool and a pail. The youngster had watched the men milk and he sat down to his first milking stunt with the air of a veteran. The 22-year-old cow took kindly to the efforts of the novice, though Mr. Beard had misgivings as to whether she would brush him

away. Dutchie milked easily and George sccured three quarts at his first attempt. He milked the cow regularly every night after that through the summer and gradually acquired the requisite strength to milk her clean. He weighed about 40 pounds when he began milk-ing and has become very muscular through the constant exercise.

Lad Born Farmer.

The little lad seems to be a born husbandman. When three years old he used to go to the pasture alone and bring in the cows. He could not tie them, but would have them in their right places and knew the name of each one. He takes a keen interest in all the affairs of the farm.

During the past season he took charge of a Jersey calf, which he led about and trained to drive with an improvised harness and reins,

WO heads are said often to be better than one. This is not always the case. It depends upon the case.

In a recent bulletin, published in this paper, from the University of Washington at Pullman, written by Professor

Master George Foster Beard Milking at the Age of Three and One-Half Years.
