The First European Streamline **Brought Out In This Country**

The new 1915 Detroiter is the first American example of that pure grace and beauty of design which Europeans call "streamline." You have seen hints of it in others cars. See now the actuality in the Detroiter. Visit a Detroiter salesroom. Examine the car at your leisure. Try it on the road. This is absolutely the first real European streamline in America; First highspeed, long stroke, ball-bearing motor; lightest car of its class; biggest car for the money. As a car for country use it has no equal.

Tremendous power at all speeds distinguishes the ball-bearing Detroiter motor. French motors of this type won all first four prizes at the Indianapolis races this year; and German motors of the same type, on July fourth, carried off the three first honors in the great French classic, the Grand Prix, at Lyons.

The Detroiter is the only car made in America with this type of motor-a model of what The Automobile calls "epitome of the best that Europe can provide in design and construction."

More than that, as Motor Magazine states, "the economy of the foreign car is much greater than that of the American product. The American people are demanding economical opera-

The Detroiter is the answer to this demand. Over roads of every description this handsome car carries five passengers from twenty to twenty-five miles on every gallon of fuel.

Thirty-five very noteworthy features also mark the new Detroiter. We invite every person interested in the coming type of American motor car to visit a Detroiter salesroom. It is worth while-for the new Detroiter is distinctly a revelation.

Some of the 35 Special Features:

112-inch wheelbase. 82 horsepower.
