When Hogging Off Corn Gives Poor Results

"THE value of the hogging off methods of harvesting the corn crop has been very definitely established both in the corn belt states and other states," said Professor H. D. Scudder, agronomist of the Oregon station. "The money value of the crop is fully as great as when it is harvested by hand and fed to the stock, and the labor cost is much less. Another gain is effected in the savings of all fertilizer values, which are returned to the field by this method.

"It has been shown conclusively that the practice of hogging off has a beneficial effect on the soil and increases farm

profit by reducing the labor expense. Its results with the hogs are said by our animal husbandry authorities to be entirely satisfactory when followed by supplemental feeding during the finishing stages of fattening for market."

A Courteous Apology.

An interested visitor who was making a call in the tenement district, rising, said:

"Well, my good woman, I must go now. Is there anything I can do for you?"

"No, thank ye, mem!" replied the submerged one. "Ye mustn't mind it if I don't return the call, will ye? I haven't any time to go slummin' meself."—Argonaut.
