The water in Canyon creek is getting low and the indications are that within a short time the creek will be dry, at least through Canyon City. Generally it is along in August before the water commences to run low. The river is as low as it generally is in midsummer. Last winter the snow fall was light and it is freely predicted now that before the summer is well advanced the water supply in all of the streams will be very low and it is probable that many streams that usually run throughout the year will go dry.—Blue Mountain Eagle.
