TYPHOID is no more necessary than Smallpox. Army experience has demonstrated the almost miraculous efficacy, and harmlessness, of Antityphoid Vaccination. Be vaccinated NOW by your physician, you and your family. It is more vital than house insurance. Ask your physician, druggist, or send for "Have you had Typhoid?" telling of Typhoid Vaccine, results from case, and danger from Typhoid Carriers. THE CUTLER LABORATORY, BERKELEY, CAL. PRODUCING VACCINES & SERUMS UNDER U. S. GOV. LICENSE

Miss Melba Griffiths accompanied Mr. and Mrs. H. C. Githens and Miss Lera Githens on their return from Mouthout, and is visiting at the home of Mr. and Mrs. John Patterson. Miss Griffiths has secured a position as teacher in the Corvallis schools for the coming year.

Mrs. J. A. Waters is in The Dalles this week, attending the Eastern Oregon convention of the Christian church, going as a delegate from the Heppner church.

SINNOTT SPEAKS FOR RECLAMATION

Washington, D. C., June 24.—(Special)—Congressman Nick Sinnott of Oregon plead for immediate and substantial action in the way of "keeping the home fires burning" for the returning American soldier boys in a speech to-day on the Reclamation appropriation bill. He renewed his battle of a few days ago for immediate enlargement of the program for reclamation of arid lands in order that the waste places might at once be turned into homes and farms for the returning soldier boys. He said this was no time for "watchful waiting," that there was no need for extended investigations as proposed in the bill. He held up before his colleagues on the floor big, thick printed reports made by the Reclamation Service and the State of Oregon upon prospective projects in that state and told them that these reports showed in detail everything necessary about the engineering features and the quality of the land to be irrigated.

Among the Oregon projects which he brought to the attention of the House were the Malheur and Owyhee projects, the Ochoco, Crooked River, Silver Lake, Deschutes and John Day projects. He asserted that the development of these projects would make available 600,000 acres of land on which returning soldiers might raise 30 to 50 bushels of wheat per acre or the equivalent thereof.

When asked by Representative Hampton Moore of Pennsylvania how these could be made available to soldiers, Sinnott said:

"The matter of getting ready these homes and farms for the returning soldiers should not be delayed to wait for extended investigations. I believe the entire nation will unanimously endorse any well considered movement or legislation designed to reward our returning soldiers by furnishing them with homes or the opportunity to earn them, by giving them a tract of the very land they are today so bravely hazarding their lives to defend.

"Let us enter upon this work in order to enthuse and inspire our boys 'over there.' Let us inspire them with the word that a grateful nation a grateful people, proposes at this time to dedicate a portion at least of the very home land they are so valiantly defending, as homes and farms for these boys, and their wives and children, and when we do this we shall do little enough. At best it will be a scant, a meager recognition indeed of the great debt that we shall owe to these heroes when this war is over."

CURING HAY WITHOUT STACKING IS WASTEFUL

Stacked Hay is in Demand By Feeders—Tops Market When Sold.

O. A. C. Corvallis, Ore., June 24.—This is a good year for stacking hay. The practice of cutting hay, raking it, and curing it in cocks where it is left until it is baled saves some labor, but is an expensive and wasteful process from the standpoint of forage.

"Much hay is spoiled annually by bleaching and by wetting," says G. R. Hyslop, professor of farm crops in the Oregon Agricultural College. "Most of the loss in quality and shrinkage may be saved by stacking the hay. Less labor at baling time is required, and the hay is more uniform. In addition to this, the excessive drying out and brittleness may be avoided, giving a leafy, tough, palatable, nutritious type of hay with good color. This is the kind of hay most in demand by feeders and the hay which tops the market when offered for sale."

To build a hay stack a foundation preferably of poles or boards, or of old straw or weeds or some material of that sort should be put on the ground to prevent moisture drawing up into the stack, points out Professor Hyslop. The hay should if possible, be pitched on the stack from both sides, as the large amount of tramping on one side when hay is only pitched on from that side, results in uneven settling.

The middle of the stack must be kept built high so that in settling there is always a tendency for any moisture which may penetrate the stack to run out. Care should be taken not to build the stack too wide as it will necessitate extreme high handling in order to top it satisfactorily.

LOST—Open face 16 size, nickel, Hamilton watch. Finder return same to Borg, Jeweler, and receive reward. 2t pd.

BILLS

The Packer's Bill for Live Stock

For the first six months of our operations under the Food Administration, ending April 30, 1918, Swift & Company paid for live stock - 1,558,600,000 \$323,800,000
For the same period in 1917 1,338,300,000 \$210,400,000
Increase in Weight 16 1/2% 220,300,000
Increase in cost 54% - - - \$113,400,000

The Consumer's Bill for Meat

must necessarily have increased correspondingly, as Live Stock prices and meat prices fluctuate together.

When the producer gets high prices for his live stock, the consumer's meat bill must necessarily be larger.
