The purpose for which this meeting is called is to elect a Board of Directors for the ensuing year and for the transaction of any other business which may properly come before it.

W. G. SCOTT, President.  
Attest, W. O. HILL, Cashier.  
Dated at Lexington, Oregon, December 2, 1918.

YANK INVENTORS MASTER WIRELESS

As predicted when America entered the war—Yank inventions have come fast—necessity being the mother of such. It now develops that wireless telephony—from airplane to artillery—has been used on the American front for the last six months. Now Roy A. Weagant of New York has invented a method of control for wireless telegraph which makes static and other interference with messages impossible.

Road Drag Offers Simple, Inexpensive Method of Highway Maintenance.

The drag is a simple and inexpensive device for maintaining certain types of roads which when wet become rutted under traffic and which become firm on drying out. It is also well adapted for producing a smooth and uniform surface on newly constructed roads in which the material used for surfacing is earth, earthy gravel, or some similar material. It is essentially a maintenance implement, and its use in construction is distinctly secondary. Roads which are very rocky or very sandy can not be materially improved by its use.

Properly used at the right time the road drag performs four distinct offices. First, by moving at an angle to the traveled way it tends to produce or preserve a crowned cross section. Second, if used when the material of the surface is not compact and hard, it tends to reduce ruts and other irregularities in the road by moving material from points which are relatively high to those which are relatively low. Third, when used after a rain it accelerates the drying out of the road by spreading out puddles of water and thus increasing the surfaces exposed to evaporation. Fourth, if the surface material is in a slightly plastic state, dragging smears over and partially seals the so-called pores which naturally occur in earthy material, and thus makes the road surface more or less impervious to water. The advantage of this smearing action of the drag will be more readily understood if a sample of ordinary earth is examined under a magnifying glass. Such an examination will show that the earth closely resembles a sponge or honeycomb in structure, and the desirability of closing the open pores will be readily apparent.

If used improperly or at the wrong time, the drag may do actual injury to a road. Dragging a very dry road, for example, serves to increase the quantity of dust and may do additional damage by destroying the seal produced during previous dragging. If, on the other hand, the road is very wet and muddy, the irregularities in the surface are likely to be increased rather than diminished by dragging.

Thoroughbred mammoth bronze turkeys for sale. Farm of T. J. Matlock. 2t

LOST—Child's overcoat, somewhere between Heppner and Hardman. Plaid coat with black and white check lining. Reward. Notify this office. 3t
